## **ABSTRACT**

This study of the Polyplacophora, Bivalvia, Scaphopoda, and Cephalopoda occurring on Jeju Island is the result of fifteen years of research into the biodiversity, biogeography, and ecology of Jeju Island mollusks. It examines the distribution, both general and local, of all species reported to date in those four classes, and also presents data on their habitat and biogeographical affinities. Specimens were collected from 56 survey stations (90 specific localities) around the island, from the intertidal and shallow subtidal zones as well as by SCUBA diving in several localities. A wide selection of relevant literature was consulted for identification purposes, as well as for taxonomic, biogeographical, and ecological information. Original descriptions, illustrations, and type localities are presented as well as relevant remarks on taxonomy, location of types, and distinguishing characteristics. Distribution maps are also provided to more clearly show the occurrence of each species around the island. A total of 272 species are treated, 19 polyplacophorans (chitons), 225 bivalves, 8 scaphopods, and 20 cephalopods. Eleven species have been added to the island's mollusk fauna: seven bivalves, three chitons, and one cephalopod, with most of those species ranging south to Southeast Asia and the Indo-Pacific. Most species of three of the four classes studied prefer warm water, with only the Polyplacophora favoring cooler water. It appears that in the above classes a slight shift toward a warmer water mollusk fauna has occurred and may be attributable to climate change.

## INTRODUCTION

Jeju Island, 33.10 to 33.50 N. Lat., 126.10 to 127.0 E. Long, is Korea's largest and southernmost island with an area of about 1800 km<sup>2</sup>. It is situated about 80 km. south of the Korean peninsula. The coastline is mainly rocky with several sandy beaches and a few sand tidal flats. Mud flats are virtually nonexistent. (Choi *et al.*, 2000). Although cooler water currents, particularly from the eastern area of the Yellow Sea, exert some influence, the warm Tsushima Current, a branch of the Kuroshio flowing from the southwest, gives the island a warm maritime climate with mild winters and hot, humid summers, and an average yearly temperature of 16°C (61°F) (World Climates, 2015) (Fig. 1). The prevailing winds from the Pacific Ocean are southeasterly in summer, and also help to raise the temperature of the water. The water temperature is highest in August (26.1°C-78.9F) and the lowest in February or March (13.5°C-56.2F) (World Sea Temperature, 2015).

The blending of warm and cool currents around the island has resulted in an abundance of marine life. Jeju Island has a rich mollusk fauna, with over 1000 species presently recorded, This fauna is a combination of warm temperate (Central Japan to the Yellow Sea) and tropical and subtropical species (Southern Japan to Indo-West Pacific) (Noseworthy *et al.*, 2007). The great majority of Jeju mollusks are gastropods, followed by bivalves, and the three smaller classes, Cephalopoda, Polyplacophora, and Scaphopoda respectively.

This catalogue is the result of fifteen years of research and fieldwork on the mollusks of Jeju Island. A previous catalogue (Noseworthy *et al.*, 2007) listed the island's mollusk fauna, giving general and island distribution and also commenting on the nature of the fauna and its affinities with other regions. 225 bivalve species out of 1,015 marine mollusks listed in this catalogue were recorded from subtidal and intertidal habitats (Noseworthy *et al.*, 2007).

**Fig. 1:** Ocean currents which affect the climate and marine fauna of Jeju Island. (After Tae, J. J. 1988)

## **Historical Background**

The Korean fauna received little attention from malacologists in the nineteenth and the first half of the twentieth century. In the middle of the nineteenth century some mollusk collections from Korean waters were made during the visit of the British Navy ship “H. M. S. Samarang”. Arthur Adams, a malacologist and assistant surgeon on the “Samarang” supervised these collections. They were described in the “Zoology of the Voyage of H.M.S. *Samarang*” (Adams and Reeve, 1850). Five bivalve species described here also occur in Jeju Island, and several others described elsewhere are also listed. Adams, in his introduction to the mollusk section of the above publication, stated: “In Quelpart (Jeju Island), for instance, where the perpendicularity of the sides of this deep-seated submarine mountain will not allow of the formation of coral, few shells are found.”

Reeve (1847) described a Polyplacophora (chiton) species, “*Chiton coreanicus*” (=*Lepidozona coreanica*) from the “Korean Archipelago” based on the “Samarang” collections, and Adams and Reeve described two others, “*Chiton scutiger*” (=*Acantochitona scutigera*) and “*Chiton circellatus*” (=*A. circellata*) from the “Island of Quelpart” (Adams and Reeve in Reeve, 1847)

Jeffreys (1879) described a collection of bivalves, gastropods, and brachiopods, without illustrations, from Korea Strait, between Jeju Island and the southern Korean mainland. However, his list was based on the erroneous idea that a number of species from Japan or Korea were the same as those in Europe: “certain species ... are identical or varieties of European species” (p. 418). Although it would be most interesting to ascertain the Korean species to which Jeffreys was referring, it would be extremely difficult, if not impossible, to do so without access to the actual specimens.

Lee (1956) and Yoo (1976) reviewed other European works of the nineteenth century that dealt mainly with freshwater or brackish water fauna, mostly from the mainland. However, A. Adams, who described the “Samarang” species, also described a lucinid species (*Myrtea delicatula* A. Adams, 1862) from Korea Strait. In the first half of the twentieth century Japanese authors began to catalog the Korean fauna, and some comprehensive lists were produced. Nomura and Hatai (1928) discussed the distribution of 59 species of bivalves along the eastern, southern, and western coasts of Korea. Shiba (1934) published the “Catalogue of the Mollusca of Chosen (Corea)” enumerating 93 marine bivalves (excluding freshwater Unionidae and freshwater and brackish water Corbiculidae). Some attention was paid to the Cephalopoda with the publication of a species list of Korean cephalopods (Yamamoto, 1942).

In the 1950s Korean national malacological studies began (Lee, 1956; 1958; etc.). Many of the pioneer studies on the experimental culture of cephalopods were performed by Korean and Japanese workers on species of the Sepiidae family. Ohshima and Choe (1961) described rearing success in four cephalopod species, three of which have been reported from Jeju Island. In 1990 a two-part survey of Korean chitons was published (Dell’Angelo *et al.*, 1990; Hong *et al.*, 1990) which included 23 species. The sampling program which produced this study did not include Jeju Island, but the majority of species covered also occur on the island. Also, in the introduction to Part One, a summary is given of the history of Polyplacophora research in Korea. Several identification guide-books with color photographs (Yoo, 1976; Kwon *et al.*, 1993; 2001; Kwon, and Lee, 1999; Min *et al.*, 2004) have been published. Lists of Korean mollusks (Je, 1989, Lee and Min 2002; Noseworthy *et al.*, 2002, 2007, 2010) have also been produced, with Noseworthy *et al.* (2007) being the first

comprehensive listing of the Jeju Island mollusk fauna. These works have contributed much to the understanding of the species composition of the molluscan fauna of Jeju Island specifically and also the Korean Peninsula.

There have been many studies of Jeju bivalves, with emphasis on those which may have some commercial value. Those studies examine the parasitology, physiology, and reproduction of species such as *Saccostrea kegaki*, *Striostrea circumpicta*, and *Hyotissa hyotis* (Hong *et al.*, 2013), *Heteromacoma irus* (Limpanont *et al.*, 2011), *Ylistrum japonicum* (Son and Chung, 2005), and *Acrosterigma burchardi* (Limpanont *et al.*, 2010); Choi *et al.* (2000) provide an overview of 26 bivalve species with possible commercial potential. However, no commercial bivalve mollusk aquaculture is possible because of the relatively small populations of edible species and the exposed, mainly rocky shoreline.

The Scaphopoda has received little, if any attention from either Korean or Japanese researchers. Most of the scaphopod species were described first from Japan or other regions and later found in Korea, including Jeju Island.

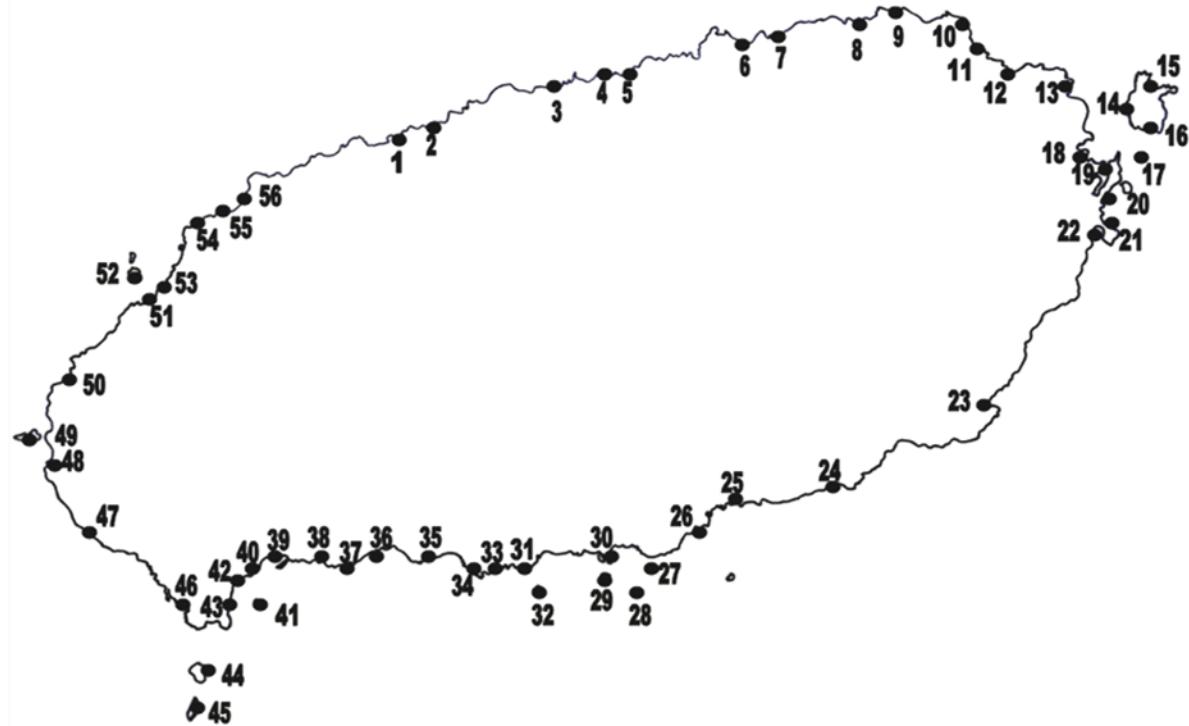

## MATERIALS AND METHODS

Four classes, Bivalvia, Polyplacophora, Scaphopoda, and Cephalopoda, were surveyed in order to ascertain their distribution and habitat, and update their taxonomy. All bivalves, including a freshwater species, were included. Detailed locality lists were prepared which included the number of specimens, living or dead, maturity of specimens, and other relevant comments. Special attention was paid to the possible effects of climate change on the composition of the fauna. The island's gastropod fauna is quite extensive, about 800 species, so it was decided to include this class in a future study.

Mollusks belonging to the four classes studied were collected from a total of 56

general survey stations encompassing the coast of the island (Fig. 2). An attempt was made to sample as many localities as possible with a wide variety of habitats. All records from the previous catalogue are included as well as new survey stations and species records, both from fieldwork and literature. Some stations were visited on several occasions, and many of them contained several specific collecting localities. Therefore the surveys included 87 marine and 3 freshwater localities, for a total of 90 localities. The map (Fig. 2) shows the location of those stations. The numbers correspond with those in the list of stations. Specimens collected are kept either at the Shellfish Aquaculture and Research Laboratory at Cheju National University (CNU) or in the author's collection (RGN). Additional locality records were obtained from a number of sources: *Mollusks in Korea* (Min *et al.*, 2004), *Commercially Exploitable Bivalves in Jeju Island*. (Choi *et al.*, 2000), *The Chiton Fauna (Mollusca: Polyplacophora) of Korea. Parts I and II* (Dell'Angelo *et al.*, 1990; Hong *et al.*, 1990), and *Cephalopods of the World* (Jereb and Roper, 2005, 2010; Jereb *et al.*, 2014). These records are listed in the catalog if they are the only ones available for any species.

Collecting of marine species was done mainly from the intertidal and upper subtidal zones, and beach driftlines. Specimens of Polyplacophora were tied in flattened position before being immersed in 70% ethanol or dried. Details of the valves and girdles, important for identification, were studied under a dissecting microscope. Live-taken bivalves, after identification, were stored in 70% ethanol. Several octopods were encountered during fieldwork, and those were carefully photographed for identification; sepiids were identified mainly from cuttlebone. Scaphopods were obtained from beach drift. Samples of beach drift, rock brushings, and detritus obtained from depths of  $\frac{1}{2}$  to two meters were also sorted, and the micromolluscs extracted and identified with the help of a Zeiss dissecting microscope and a handheld 50x magnifier. Freshwater surveys were conducted with the aid of a long-handled

Suwon, 55. Gwideok, 56. Gwakji

sieve in order to obtain samples of mud and aquatic plants which might contain samples of Sphaeriidae

In 2012 the author identified a large number of mostly live-taken mollusk specimens obtained by SCUBA on behalf of ECO21, an environmental survey company; all species identified from each location were listed with relevant comments regarding numbers, sizes, and association with other mollusks. Also, a survey was conducted by the Shellfish Aquaculture and Research Laboratory, from 2012 to 2014, on the distribution of the encrusting coral *Alveopora japonica* Eguchi, 1968, which was rapidly extending its range around the island. Coral specimens were obtained by SCUBA diving from several localities around the island. Mollusks, mainly bivalves, were sorted and identified, then preserved for further study. Identification of specimens was facilitated by several books, mainly *Mollusks in Korea* (Min *et al.*, 2004), *Compendium of Bivalves* (Huber, 2010), *Catalogue of the Living Bivalvia of the Continental Coast of the Sea of Japan (East Sea)*. (Lutaenko and Noseworthy, 2012), and *Marine Mollusks in Japan* (Okutani, 2000), as well as local field guides and a selection of journal publications.

Apart from the regular numbering of figure and tables in the other sections of the text, species in the taxonomic section are figured separately for each class; this is done for easier reference. Ten plates are also included showing species representative of the Jeju bivalve fauna. The entries in this catalogue follow a specific format. For each species, the citation for the original description is given with the illustration, if any, as well as the original name. The type locality, if known, is also given, followed by the habitat and general distribution range. Specific Jeju survey stations are listed and also mapped to show the distribution of each species more clearly; the listing is in a clockwise order, and the mapping follows this order. As in the list of stations in Fig. 2, Dong-gwi, or the next nearest locality, has been selected as

the first station; the first map mark is hollow, to indicate the beginning of the clockwise mapping of localities, and the rest are solid. The names of all localities and the map marks coincide (Fig. 3).

Any species having only one or two localities is combined with one or two others on one map to make the listing more compact. Different locality marks are used for each species on the combined maps (Fig. 4). This arrangement eliminates the necessity of a cumbersome numbering system.

Zonal-geographical groupings are included to more clearly show the biogeographical affinities of each species, followed by remarks, if necessary, regarding taxonomy, distinguishing characterizes, location of types, and other relevant information. Although every effort was made to include specific references to page and figure numbers in the original descriptions, as well as type localities, some literature, apart from online references, was unobtainable. In those few cases, the general reference is given and the type locality is referred to as “unobtainable”. In the References section references are grouped by each class for easier access. Abbreviations of institutions referred to in the species catalogue are listed below.

# SPECIES CATALOGUE

**Class: POLYPLACOPHORA de Blainville, 1816**

**Subclass: Neoloricata Bergenhayn, 1955**

**Order: LEPIDOPLEURIDA Thiele, 1910**

Suborder: Lepidopleurina Thiele, 1910

**Family: LEPTOCHITONIDAE Dall, 1889**

**Genus: *Leptochiton* Gray, 1847**

**1 *Leptochiton japonicus* (Thiele, 1909)**

(Fig. 1)

**ORIGINAL DESCRIPTION:** Thiele, J. 1909. *Revision des Systems der Chitonen.*

Zoologica Stuttgart, 22, 11, pl. 1; figs. 21-29 (As *Lepidopleurus japonicus* Thiele, 1909)

**TYPE LOCALITY:** Kajima, Shizouka Prefecture; Enoshima, Sagami Bay, Japan? “1 type specimen from Kajima (in alcohol) and 1 set of plates from Enoshima (also marked as a type” (Ferreira, 1979)

**HABITAT:** Shell and gravel substrate at depth of 20-500 m.

**GENERAL DISTRIBUTION:** Korea; Japan; East Sea; Sea of Okhotsk; **JEJU:** Dodu-dong, Jeju-shi (Jeju City) (“Jejudo” Hong *et al.* (2006)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-lowboreal

**REMARKS:** Ferriera (1979) regarded *L. japonicus* as a synonym of *Leptochiton alveolus* Loven, 1846), described from the North Atlantic. However, Skoglund (1989) restricts *L.*

*alveolus* to the North Atlantic and regards *L. japonicus* as a synonym of *L. belknapi* Dall, 1878. Sigwart *et al.* (2011) and Schwabe (2014) accept *L. japonicus* as a valid species. Types in Zoologisches Museum, Humboldt University, Berlin (Ferriera, 1979).

## **Order: CHITONIDA Thiele, 1910**

Suborder: Chitonina Thiele, 1910

## **Superfamily: Chitonoidea Rafinisque, 1815**

### **Family: ISCHNOCHITONIDAE Dall, 1889**

#### **Genus: *Lepidozona* Pilsbry, 1892**

##### **2 *Lepidozona coreanica* (Reeve, 1847)**

(Fig. 1)

**ORIGINAL DESCRIPTION:** Reeve, L. 1847. Descriptions of new species of shells collected in the Eastern Archipelago by Capt. Sir Edward Belcher and Mr. Adams during the voyage of H.M.S. Samarang. *Proceedings of the Zoological Society of London* 15 (169): 24-26. (As *Chiton coreanicus* Reeve, 1847) (Without illustration) (First figured in *Conchologia Iconica*, (1847) Vol. 4, Plate XXVII, No. 128) (see Petit, 2007, p. 30)

**TYPE LOCALITY:** Korean Archipelago

**HABITAT:** Underside of stones in intertidal and subtidal zones

**GENERAL DISTRIBUTION:** Korea and Japan to Hong Kong; **JEJU:** Jeju-shi, Supseom, Seogwipo, Munseom, Gangjeong, Yerae, Daepyeong, Hwasoon, Sagyei, Songaksan, Hyeopjae

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-lowboreal

**REMARKS:** Figured without description or comment in Adams and Reeve (1850) (Pl. 15, fig. 9). Type: BMNH 2986.136/1; lectotype (designated by Kaas and Van Belle, 1987).

*Ischnochiton coreanicus* Adams & Reeve, 1847 is a synonym.

**Genus: *Ischnochiton* Gray, 1847**

**3 *Ischnochiton (Ischnochiton) boninensis* Bergenhayn, 1933**

(Fig. 2)

**ORIGINAL DESCRIPTION:** Bergenayn, J. R. M. 1933. Die Loricaten von Prof. Dr. Sixten Bocks Expedition nach Japan und den Bonin-Inseln 1914. *Kungliga Svenska Vetenskapsakademiens Handlingar* 12(4): 1–58, pls. 1–3. (As *Ischnochiton boninensis* Bergenayn, 1933)

**TYPE LOCALITY:** Sagami, Japan

**HABITAT:** Underside of rocks in intertidal and subtidal zones

**GENERAL DISTRIBUTION:** Sea of Okhotsk to East China Sea; **JEJU:** Bukchon-ri,

Seongsan, Munseom, Gangjeong, Yerae, Daepyeong, Hyungjaeseom, Songaksan, Hyeopjae

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-lowboreal

**REMARKS:** *Ischnochiton (Ischnochiton) boninensis* can be distinguished from *I. (Haploplax) comptus* by the presence of vertical striations on girdle scales, while those of the latter are smooth. Lee *et al.*, (2008) stated that differences in scale morphology are not sufficient to separate *Ischnochiton* genera, as is presently done. Syntypes are in UUZM, Sweden (Wallin, 1996). The dominant algae ingested by *Ischnochiton* are corallines (Kaas and van Belle, 1987). *Ischnochiton (Simplischnochiton) boninensis* Bergenayn, 1933 and *Ischnochiton boninensis zebrinus* Is. Taki, 1962 are synonyms.

## POLYPLACOPHORA

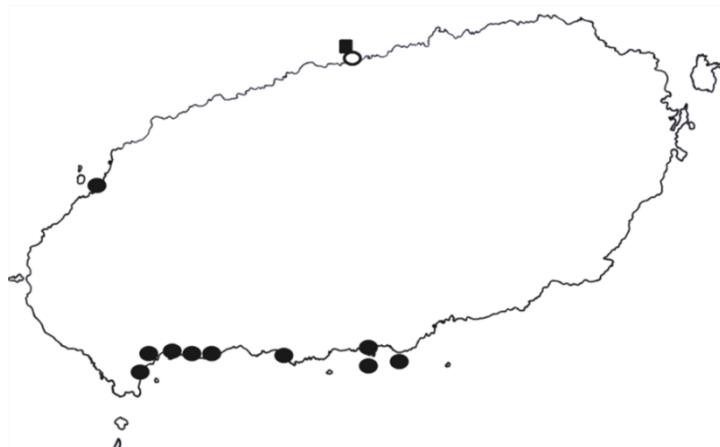

Fig. 1: Distribution of *Lepidozona coreanica* (●) and *Leptochiton japonicus* (■)

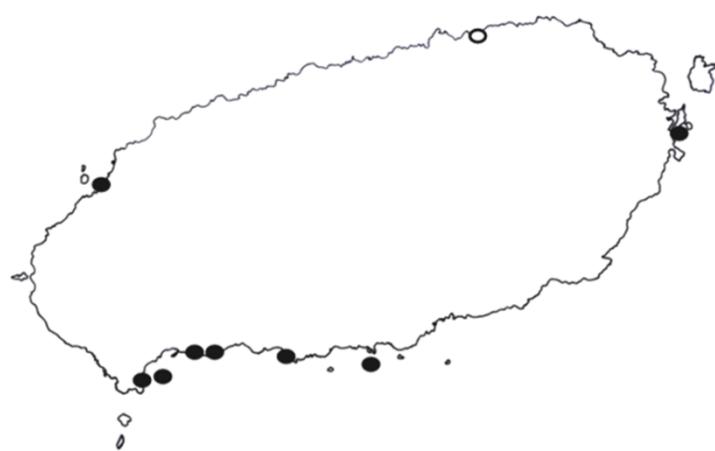

Fig. 2: Distribution of *Ischnochiton (Ischnochiton) boninensi*

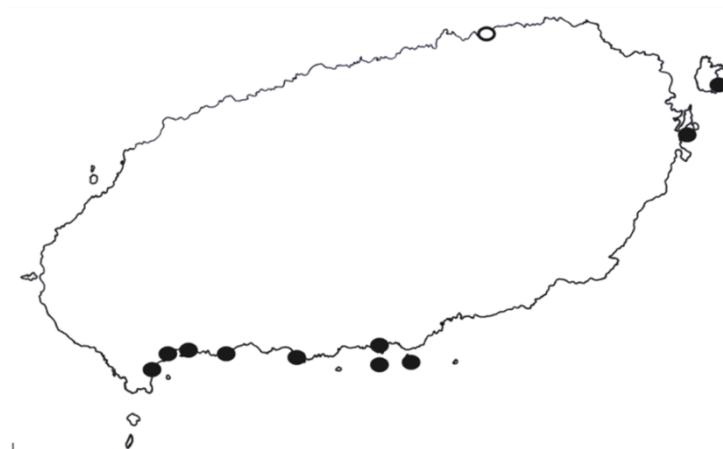

Fig. 3: Distribution of *Ischnochiton (Haploplax) comptus*

**4 *Ischnochiton (Haploplax) comptus* (Gould, 1859)**

(Fig. 3)

**ORIGINAL DESCRIPTION:** Gould, A. A. 1859. *Proceedings of the Boston Society of Natural History.* VII. 163-164. (As *Chiton (Leptochiton) comptus* Gould, 1859) (Without illustration)

**TYPE LOCALITY:** Oosima (O'shima, South of Sagami Bay)

**HABITAT:** On underside of stones in intertidal and subtidal zones

**GENERAL DISTRIBUTION:** Japan to Hong Kong; **JEJU:** Bukchon-ri, Udo (Geomullae), Seongsan, Supseom, Seogwipo, Munseom, Gangjeong, Yerae, Hwasoon, Sagyei, Songaksan,

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-lowboreal

**REMARKS:** Pilsbry (1892) lists color variations in this species, and questions Gould in assigning it to *Leptochiton*.

**Family: CHITONIDAE Rafinesque, 1815**

**Subfamily: Chitoninae Rafinesque, 1815**

**Genus: *Chiton* Linnaeus, 1758**

**5 *Chiton (Rhyssoplax) kurodai* Is. & Iw. Taki, 1929**

(Fig. 4)

**ORIGINAL DESCRIPTION:** Taki, Is. & Iw. 1929. *Studies on Japanese Chitons* (1). *The Venus*, Vol. 1, No. 2, pp. 49, 52-53, Pl. 2, fig. 3; text figures 8-11. (As *Chiton kurodai* Is. & Iw. Taki, 1929)

**TYPE LOCALITY:** Seto, Kii Province, Japan

**HABITAT:** Underside of stones in intertidal and subtidal zones

**GENERAL DISTRIBUTION:** Korea and Japan; **JEJU:** Jeju-shi, Bukchon-ri, Udo

(Geomullae), Songsan, Munseom, Yerae, Daepyeong, Hyupjae

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-lowboreal

**REMARKS:** May superficially resemble *Ischnochiton comptus* (Gould, 1859); however, *I. comptus* possesses fine granules arranged in zigzag patterns on the valves while *C. kurodai* is sculptured with fine longitudinal grooves. *Rhyssoplax kurodai* (Is. and Iw. Taki, 1929) is a synonym.

**7 *Liolophura japonica* (Lischke, 1873)**

(Fig. 6)

**ORIGINAL DESCRIPTION:** Lischke, C. E. 1873. Diagnoses neuer Meeres-Conchylien aus Japan. *Malakozoologische Blatter*, xxi, p. 22 (As *Chiton japonicus* Lischke, 1873  
(Without illustration)

**TYPE LOCALITY:** Nagasaki, Kyushu, Japan

**HABITAT:** On rocks, exposed or in crevices, in intertidal zone

**GENERAL DISTRIBUTION:** Southern Korea and Central Japan to eastern China; Gulf of Thailand; **JEJU:** Jeju-shi Hwabuk Bukchon-ri, Udo (Hagosudong), Seongsan, Munseom, Gangjeong, Yerae, Daepyeong, Hwasoon, Sagyei, Songaksan, Gosan, Hyeopjae

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Ferreira (1986) gives a detailed review of this species and discusses synonyms.

*Acanthopleura japonica* (Lischke, 1873) is a synonym.

**8 *Liolophura* cf. *tenuispinosa* Leloup, 1939**

(Fig. 6)

**ORIGINAL NAME: ORIGINAL DESCRIPTION:** Leloup, E. 1939. A propos des Amphineures *Liolophura japonica* (Lischke, 1873) et *L. giamardi* (Blainville, 1825): deux nouvelles formes. *Bulletin du Musée Royal d'Histoire Naturelle de Belgique*, 15(1): 1-3, figs. 1, 3, 4. (As *Liolophura japonica* f. *tenuispinosa* Leloup, 1939)

**TYPE LOCALITY:** Shikok Kamigari, Japan

**GENERAL DISTRIBUTION:** Southern Japan to Southeast Asia; **JEJU:** Munseom

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Described as a form of *L. japonica* and later synonymized as *Acanthopleura japonica*, but subsequently regarded as a valid species (Saito & Yoshioka, 1993), and now accepted as such. Also known as *Acanthopleura tenuispinosa*. Resembles *L. japonica* but possessing subcentrally raised mucro and girdle with more slender spicules. Single specimen from Munseom exhibits thick girdle covering of slender spicules but valves somewhat worn making the mucro difficult to examine.

Suborder: Acanthochitonina Bergenhayn, 1930

**Superfamily: Mopalioidea Dall, 1889**

**Family: MOPALIIDAE Dall, 1889**

**Subfamily: Mopaliinae Dall, 1889**

**Genus: *Mopalia* Gray, 1847**

**9 *Mopalia retifera* Thiele, 1909**

(Fig. 7)

**ORIGINAL DESCRIPTION:** Thiele J. 1909. Revision des Systems der Chitonen. I. Teil.

*Zoologica. Original-Abhandlungen aus dem Gesamtgebiete der Zoologie, Stuttgart*, 22 (56/1): 1–70, pls 1–6. Figs 40–60, 76, 79. (As *Mopalia retifera* Thiele, 1909). 31

**TYPE LOCALITY:** Not designated, but the following localities are given: Kagoshima, Hojo, Province Awa (Chiba Prefecture) and Enoshima (Kanagawa Prefecture), Japan; Tsingtao (Qingdao), China; Amur Bay, east of Jankowsky Peninsula (Eastern Russia).

**HABITAT:** On rocks or undersides of stones in subtidal zone

**GENERAL DISTRIBUTION:** Southern East Sea and Sea of Okhotsk, Japan to Yellow Sea and Eastern China; **JEJU:** Pyoseon; Munseom (“Jejudo” Hong *et al.* (2006)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-lowboreal

**REMARKS:** Redescribed by Saito and Okutani (1991).

**10 *Mopalia* cf. *schrencki*, Thiele, 1909**

(Fig. 7)

**ORIGINAL DESCRIPTION:** Thiele, J. 1909. *Revision des Systems der Chitonen.*

Zoologica Stuttgart, 30, pl. 4, figs. 1-10. (As *Mopalia schrencki*, Thiele, 1909)

**TYPE LOCALITY:** 4-5 miles (6-8 km) west of Schamow Inlet, Terpeniya Bay, southeast Sakhalin, eastern Russia

**HABITAT:** In coralline algae in shallow water

**GENERAL DISTRIBUTION:** Korea, northern Japan, and eastern Russia to Kurile Islands and Sakhalin; **JEJU:** Hamo

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** lowboreal

**REMARKS:** A single specimen in coralline algae at Hamo Beach at extreme low tide. May represent a new species record for Korea. Redescribed by Saito and Okutani (1991).

**Genus: *Plaxiphora* Gray, 1847**

**11 *Plaxiphora* (*Plaxiphora*) *integra* (Is. Taki, 1953)**

(Fig. 8)

**ORIGINAL DESCRIPTION:** Taki, Is. 1953. A peculiar chiton from Hachijo-jima with special reference to its distribution in the Pacific. *Records of Oceanographic Works in Japan* 1(2) (n.s.):60-65, figs. 1-13. (As *Mopalia* (*Hachijomopalia*) *integra* Is. Taki, 1953)

**TYPE LOCALITY:** Okataura, Okago-mura, Hachijo Island, southeastern Japan.

**HABITAT:** On rocks covered with coralline algae from intertidal zone to depth of 10 m.

**GENERAL DISTRIBUTION:** Korea; Izu and Ogasawara Islands (southeastern Japan);

**JEJU:** Munseom, (“Jejudo” Hong *et al.* (2006)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

Fig. 7: Distribution of *Mopalia retifera* (●) and *Mopalia schrencki* (■)

Fig. 8: Distribution of *Plaxiphora (Plaxiphora) integra* (●) and *Placiphorella stimpsoni* (■)

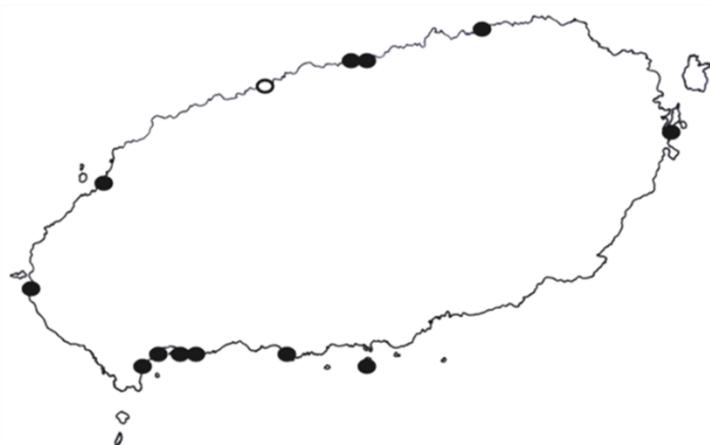

Fig. 9: Distribution of *Acanthochitona defilippii*

**Genus: *Placiphorella* Dall, 1879**

**12 *Placiphorella stimpsoni* (Gould, 1859)**

(Fig. 8)

**ORIGINAL DESCRIPTION:** Gould, A. A. 1859. *Proceedings of the Boston Society of Natural History*, vii, p. 165. (As *Chiton (Molpalia) [sic] stimpsoni* Gould, 1859. (Without illustration)

**TYPE LOCALITY:** Hakodadi Bay (Hakodate, Hokkaido, Japan)

**HABITAT:** On rocks and stones in intertidal and subtidal zones

**GENERAL DISTRIBUTION:** Korea; N. Japan, East China Sea; **JEJU:** Munseom (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-lowboreal

**REMARKS:** Syntypes are in the U. S. National Museum (Saito and Okutani, 1989)  
Redescription by the same authors.

**Superfamily: Cryptoplacoidea H. and A. Adams, 1858**

**Family: ACANTHOCHITONIDAE Pilsbry, 1893**

**Subfamily: Acanthochitoninae Pilsbry, 1893**

**Genus: *Acanthochitona* Gray, 1921**

**13 *Acanthochitona defilippii* (Tapparone-Canefri, 1874)**

(Fig. 9)

**ORIGINAL DESCRIPTION:** Tapparone-Canefri, C. M. 1873. *Malacologia in Zoologia del viaggio intorno al globo della regia fregata Magenta durante gli anni 1865–68". Zoologia Magenta.* p. 78, pl. 1, figs. 15a, b, c, e. (As *Amycula de filippi* Tapparone-Canefri, 1874)

**TYPE LOCALITY:** Yokohama, Japan

**HABITAT:** Underside of rocks and boulders on coarse sand bottom in intertidal zone.

**GENERAL DISTRIBUTION:** Korea; Japan, Taiwan; **JEJU:** Iho, Jeju-shi, Hwabuk  
Bukchon-ri Seongsan, Munseom, Gangjeong, Daepyeong, Hwasoon, Sagyei, Songaksan,  
Gosan, Hyeopjae

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** Original illustration (Tapparone-Canefri, 1874) shows only 7 valves, possibly  
an artist's error.

#### 14 *Acanthochitona rubrolineata* (Lischke, 1873)

(Fig. 10)

**ORIGINAL DESCRIPTION:** Lischke, K. E. 1873. Diagnosen neuer Meeres-Conchylien  
aus Japan. *Malakozoologische Blätter*, Vol. 21, p. 24. (As *Chiton rubro-lineatus* Lischke,  
1873) (Without illustration)

**TYPE LOCALITY:** Nagasaki, Japan?

**HABITAT:** On rocks in intertidal and subtidal zones

**GENERAL DISTRIBUTION:** Korea; Japan, China; **JEJU:** Udo (Hagosudong), Seongsan,  
Hwasoon, Sagyei, Songaksan, Hyeopjae

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-lowboreal

**REMARKS:** *A. rubrolineata* is similar to *A. achates*. However, *A. achates* differs from the  
former species by the usually finer granules on the valves, the intermediate valves possessing  
sharper beaks, a smaller tail valve, and tufts of thicker and longer spines which are striated  
near the tips. *A. rubrolineata* may also possess a few dark reddish lines on the center of the  
valves.

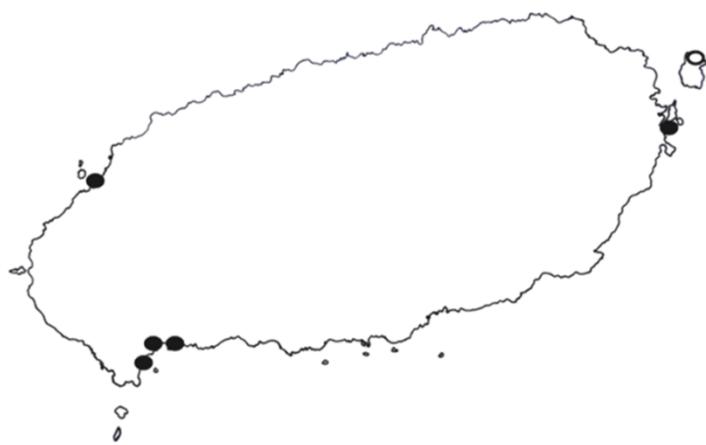

Fig. 10: Distribution of *Acanthochitona rubrolineata*

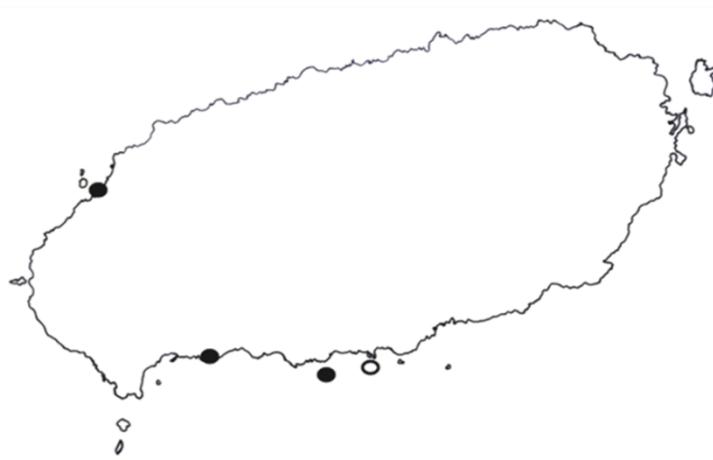

Fig. 11: Distribution of *Acanthochitona achates*

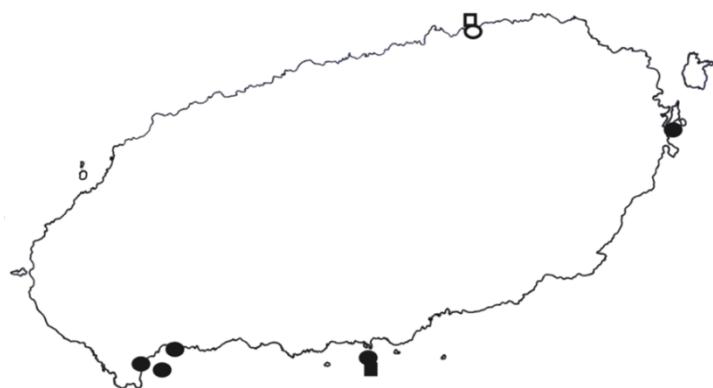

Fig. 12: Distribution of *Cryptoplax japonica* (●) and *Cryptoplax propior* (■)

## **15 *Acanthochitona achates* (Gould, 1859)**

(Fig. 11)

**ORIGINAL DESCRIPTION:** Gould, A. A. 1859. Shells collected by the North Pacific Exploring Expedition. *Proceedings of the Boston Society of Natural History*, VII (1861), p. 165. (As *Chiton (Ancathochaetes) achates* Gould, 1859) (Without illustration)

**TYPE LOCALITY:** Kikaia and Hakodadi Bay (Hakodate, Hokkaido, Japan)

**HABITAT:** On rocks in intertidal and upper subtidal zones.

**GENERAL DISTRIBUTION:** Korea and Japan to Taiwan; **JEJU:** Munseom, Bumseom Yerae, Hyeopjae

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-lowboreal

**REMARKS:** May resemble *A. defilippi*; however, *A. defilippi* is generally darker in color with a wider, fleshy girdle and less-pronounced sutural tufts.

## **16 *Acanthochitona circellata* (A. Adams & Reeve in Reeve, 1847)**

**ORIGINAL DESCRIPTION:** A. Adams and Reeve in Reeve, L. A. 1847. Monograph of the genus *Chiton* In: *Conchologica Iconica: or, Illustrations of the Shells of Molluscous Animals*, Vol. 4, pl. 27, fig. 180 (As *Chiton circellatus* A. Adams & Reeve MS, Reeve, 1847).

**TYPE LOCALITY:** “Island of Quelpart, Korean Archipelago” (Jeju Island)

**HABITAT:** On rocks in intertidal zone

**GENERAL DISTRIBUTION:** Korea (South and east coasts; Dokdo). **JEJU:** “Island of Quelpart” (Jeju) (Adams and Reeve in Reeve, 1847)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** subtropical-lowboreal

**REMARKS:** “This is the largest of the tufted species, and quite peculiar in its style of sculpture; the valves in all others of this group are minutely granulated, but in this they are

smooth, and characterized by a number of fine grooves radiating in concentric order from the umbones.” (Reeve, 1847). Reported from mainland Korea and Ullungdo (Hong *et al.*, 1990), Jindo (Kil *et al.*, 2005), and Dokdo (Ryu *et al.*, 2012), but the only record for Jeju Island is Adams and Reeve’s original type locality, which is repeated by Hong *et al.* (1990). The original description was based on specimens which had no written labels (Petit, 2007); thus the Jeju record may be an error.

### **17 *Acanthochitona scutigera* (A. Adams & Reeve in Reeve, 1847)**

**ORIGINAL DESCRIPTION:** Adams and Reeve in Reeve, L. A. 1847. Monograph of the genus *Chiton* In: *Conchologica Iconica: or, Illustrations of the Shells of Molluscous Animals*, Vol. 4, Lovell Reeve, London, pl. 27, fig. 178. (As *Chiton scutiger* A. Adams & Reeve MS, Reeve, 1847)

**TYPE LOCALITY** “Island of Quelpart, Korean Archipelago” (Jeju Island)

**HABITAT:** On rocks in intertidal zone

**GENERAL DISTRIBUTION:** Korea (west, south, and east coasts), Australia (York Peninsula, fide Thiele, 1909, p 47) (Hong *et al.*, 1990); **JEJU:** “Island of Quelpart” (Jeju) (A. Adams and Reeve in Reeve, 1847)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-low boreal

**REMARKS:** “The figure of Reeve indicates that this is a form in which the girdle encroaches much at the sutures, and the valves are coarsely granulated” (Pilsbry, 1893, p. 21). Figured syntype (NHM 1992052/1) in Schwabe (2007; p. 156, fig. 9 e, f). The only record for Jeju Island is Adams and Reeve’s original type locality, which is repeated by Hong *et al.*

(1990). The original description was based on specimens from a private collection (Reeve, 1847, sp. 178). Accurate locality records were not often kept during the many voyages of exploration during the nineteenth century, thus the Jeju record may be an error.

**Family: CRYPTOPLACIDAE H. and A. Adams, 1858**

**Genus: *Cryptoplax* Blainville, 1818**

**18 *Cryptoplax japonica* Pilsbry, 1901**

(Fig. 12)

**ORIGINAL DESCRIPTION:** Pilsbry, H. A. (1901) New Mollusca from Japan. The Loo Choo Island, Formosa, and the Philippines. *Proceedings of the Academy of Natural Sciences of Philadelphia* 53: 204. (As *Cryptoplax japonica* Pilsbry, 1901) (Without illustration)

**TYPE LOCALITY:** Hirado, Hizen (Hirado Island, western Kyushu)

**HABITAT:** Underside of stones in intertidal and subtidal zones

**GENERAL DISTRIBUTION:** Eastern and southern Korea, Japan, Sea of Okhotsk, Sakhalin; **JEJU:** Bukchon-ri, Seongsan, Munseom, Hwasoon, Songaksan, Hyungjaeseom

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-lowboreal

**REMARKS:** Juvenile specimens may resemble *C. propior* Is. and Iw. Taki, 1930, but may be separated by differences in morphology of girdle spicules (Noseworthy *et al.*, 2014).

**19 *Cryptoplax propior* Is. and Iw. Taki, 1930**

(Fig. 12)

**ORIGINAL DESCRIPTION:** Taki, Is. and Iw. Taki, 1930. Studies on Japanese chitons (4). *Venus* Vol. 2, No. 3: 99-102, pl. 3; figs. 59-75. (As *Cryptoplax propior* Is. and Iw. Taki, 1930)

**TYPE LOCALITY:** “Prov. Shima” (Shima Peninsula, now part of Mie Prefecture, southeastern Japan).

**HABITAT:** Among rhizoids of brown laminarian algae in subtidal zone

**GENERAL DISTRIBUTION:** South-central Japan to Jeju Island, southwestern South Korea; **JEJU:** Bukchon-ri, Munseom

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** For a detailed discussion of this species in Jeju Island see Noseworthy *et al.* (2014).

**Class: BIVALVIA Linnaeus, 1758**

Subclass: PROTOBRANCHIA Pelseneer, 1889

**Order: NUCULIDA Dall, 1889**

**Superfamily: Nuculoidea Gray, 1824**

**Family: NUCULIDAE Gray, 1824**

**Subfamily: Nuculinae Gray, 1824**

**Genus: *Nucula* Lamarck, 1799**

**1 *Nucula (Nucula) paulula* A. Adams, 1856**

**(Fig. 1) (Plate 1: A-D)**

**ORIGINAL DESCRIPTION:** Adams, A. 1856. Descriptions of thirty-four new species of bivalve Mollusca (Leda, Nucula, and Phytina) from the Cumingian Collection. *Proceedings of the Zoological Society of London*, 24, 52. (As *Nucula paulula* A. Adams, 1856) (Without illustration)

**TYPE LOCALITY:** Japan

**GENERAL DISTRIBUTION:** Korea and Japan to Taiwan; **JEJU:** Udo (Sanhosa), Seopjikoji, Munseom, Seogundo, Hwasoon, Hamo

**HABITAT:** Under rocks in tidepools, on sandy mud or fine sandy substrate, from the intertidal zone to depth of 50 m

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**Order: SOLEMYIDA Dall, 1889**

**Superfamily: Solemyoidea Gray, 1840**

**Family: SOLEMYIDAE Gray, 1840**

**Subfamily: Solemyinae Gray, 1840**

## BIVALVIA

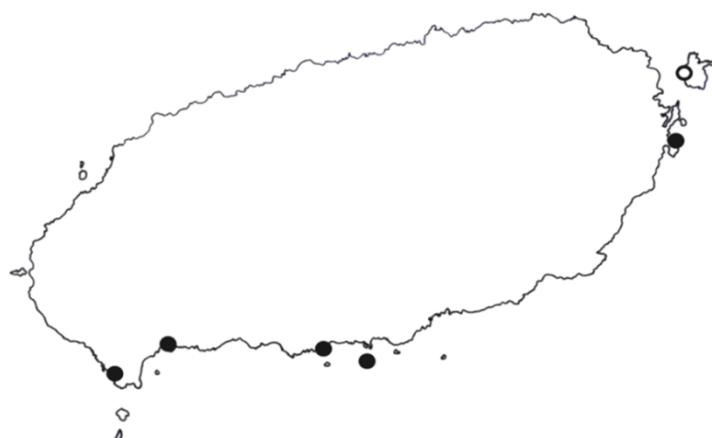

Fig. 1: Distribution of *N. paulula*

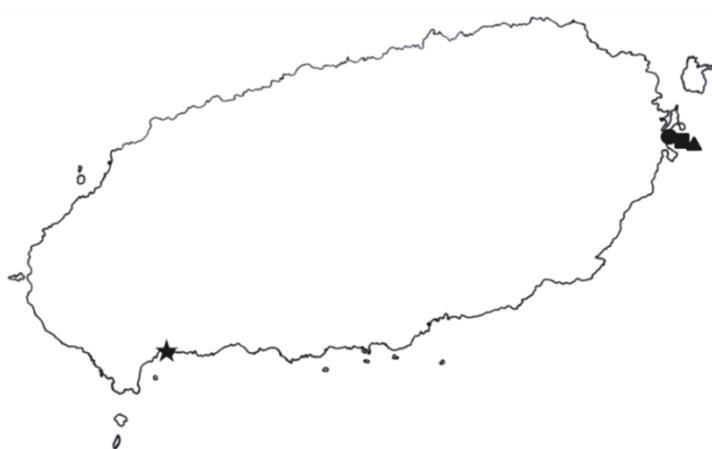

Fig. 2: Distribution of *N. (N.) scalata* (●), *N. (N.) leonina* (■), *N. (Sacella) gordoni* (▲),  
and *Solemya (Pseudacharax) japonica* (★)

Fig. 3: Distribution of *M. galloprovincialis*

**Genus: *Solemya* Lamarck, 1818**

**2 *Solemya (Pseudacharax) japonica* (Dunker 1882)**

(Fig. 2)

**ORIGINAL DESCRIPTION:** Dunker, W. 1882. Index Molluscorum Maris Japonici. Cassel: Fischer, 220, pl. 14, fig. 3. (As *Solenomya japonica* Dunker, 1882)

**TYPE LOCALITY:** Japan

**HABITAT:** Sandy mud, from the intertidal zone to depth of 50 m

**GENERAL DISTRIBUTION:** Korea and Japan to northern Taiwan (Check); **JEJU:** Hwasoon (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** Huber (2010) states that, although Japanese authors consistently refer this species to *Acharax*, it does not belong to this genus. “It is not close in broad anterior shape, neither does it show the typical extended marginal fringes, nor is it large, nor does it live bathyally”. For this species Huber proposes a new subgenus, *Pseudacharax. Petrasma* *japonica* (Dunker, 1882) is a synonym.

**Order: NUCULANIDA Carter,**

**Campbell, & Campbell, 2000**

**Superfamily: Nuculanoidea H. and A. Adams, 1858**

**Family: NUCULANIDAE H. and A. Adams, 1858**

**Subfamily: H. and A. Adams, 1858**

**Genus: *Nuculana* Link, 1807**

**3 *Nuculana (Nuculana) scalata* Prashad, 1932**

(Fig. 2)

**ORIGINAL DESCRIPTION:** Prashad, B. 1932. The Lamellibranchia of the Siboga Expedition, Systematic part II: Pelecypoda (exclusive of the Pectinidae), Vol. 34(53c)[= livr.118]: 353 pp., 9 pls., 1 chart, in M. Weber (ed.), Siboga-Expeditie. Brill: Leiden. 22, p. 1, figs. 30, 31. (As *Nuculana (Thestylida) scalata* B. Prashad, 1932)

**TYPE LOCALITY:** South China Sea (10.8°S, 123.4°E)

**HABITAT:** Sandy mud, at depths of 100-1640 m

**GENERAL DISTRIBUTION:** Korea and SE Japan to Indonesia; **JEJU:** Seongsan (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** “Bernard *et al.* reported *scalata* from South China and Taiwan. Larger series of *scalata* and *subscalata* should be reanalyzed. I am not convinced that these two are distinct. At least specimens dredged off N. Borneo approximately at 100 m are in sculpture and shape intermediate between *subscalata* and *scalata* and hard to attribute.” (Huber, 2010). *Nuculana (Thestylida) subscalata* Okutani, 1962 is a synonym.

#### 4 *Nuculana (Nuculana) leonina* (Dall 1896)

(Fig. 2)

**ORIGINAL DESCRIPTION:** Dall, W. H. (1896). New species of *Leda* from the Pacific Coast. The Nautilus. 10 (1): p. 2. (As *Leda leonina* Dall, 1896) (Without illustration)

**TYPE LOCALITY:** British Columbia, Canada

**HABITAT:** Brown mud, fine sandy mud and green ooze, at depths from 200-2560 m

**GENERAL DISTRIBUTION:** Kamchatka to Korea and Japan; Southern Bering Sea to California; **JEJU:** Seongsan (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Widely distributed boreal

**REMARKS:** “Furthermore, I fail to recognize Okutani’s *sagamiensis* as distinct.

Morphologically no traits were found separating Japanese from Washington [U. S. A.] specimens. Adult size and depth of *sagamiensis* fit *leonina* well. The number of commarginal ribs and the length of the rostrum in *leonina* changes markedly during its growth" (Huber, 2010). *N. (Thestyleda) sagamiensis* Okutani, 1962 (Sagami Bay) is a synonym.

## **5 *Nuculana (Sacella) gordoni* (Yokoyama 1920)**

(Fig. 2)

**ORIGINAL DESCRIPTION:** Yokoyama, M. 1920. Fossils from the Miura Peninsula and its immediate north. Journal of the College of Science., Imperial University, Tokyo. Vol. 39 (6) pp. 177, 178, pl 19, figs. 4, 5. (As *Leda gordoni* Yokoyama, 1920)

**TYPE LOCALITY:** Naganuma, Hokkaido, Japan (fossil)

**HABITAT:** Fine sand and mud, from depths of 15-300 m

**GENERAL DISTRIBUTION:** Korea and Japan to East China Sea (Check); **JEJU:** Seongsan (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** *Sacella gordoni* (Yokoyama, 1920) is a synonym.

Subclass: PTERIOMORPHIA Buerlen, 1944

**Order: MYTILIDA Férussac, 1822**

**Superfamily: Mytiloidea Rafinesque, 1815**

**Family: MYTILIDAE Rafinesque, 1815**

**Subfamily: Mytilinae Rafinesque, 1815**

**Genus: *Mytilus* Linnaeus, 1758**

## **6 *Mytilus galloprovincialis* Lamarck, 1819**

(Fig. 3) (Plate 5: A-D)

**ORIGINAL DESCRIPTION:** Lamarck, J. P. B. A de Monet de 1819. Histoire naturelle des animaux sans vertèbres, présentant les caractères généraux et particuliers de ces animaux, leur distribution, leurs classes, leurs familles, leurs genres, et la citation des principales espèces qui s'y rapportent; précédée d'une introduction offrant la détermination des caractères essentiels de l'animal, sa distinction du végétal et des autres corps naturels, enfin, l'exposition des principes fondamentaux de la zoologie. Tome sixième. Ire. partie. Paris. 126. (As *Mytilus galloprovincialis* Lamarck, 1819) (Without illustration)

**TYPE LOCALITY:** French Mediterranean coast

**HABITAT:** Byssally attached to rocks, stones, and other objects, in the intertidal zone to depth of 24 m

**GENERAL DISTRIBUTION:** Native to Mediterranean Sea, Black Sea, and Adriatic Sea. Introduced to Southern Africa, eastern and western North America, Hawaii, and north-eastern Asia; **JEJU:** Gimnyeong, Wolpyeong, Haengwon, Handong, Sehwa, Seongsan, Shinyang, Yerae, Hwasoon, Gapado, Marado, Sinchang, Keumneung

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Circumboreal-subtropical

**REMARKS:** *M. edulis*, *M. galloprovincialis* and *M. trossulus* are not only morphologically, but also genetically very close. Overall, biogeography seems the easiest way to differentiate within *Mytilus*. The distinction between *edulis* and *galloprovincialis* is particularly difficult (Huber, 2010). Originally regarded as *M. edulis* Linnaeus, 1758 among Asian researchers.

## 7 *Mytilus coruscus* Gould, 1861

(Fig. 4) (Plate 5: E-H)

**ORIGINAL DESCRIPTION:** Gould, A.A. 1861. *Descriptions of shells collected by the Natural History 8: 38.* (As *Mytilus coruscus* Gould, 1861) (Without illustration)

**TYPE LOCALITY:** Hakodate Bay, S. Hokkaido

**HABITAT:** Byssally attached to rocks or stones, from the intertidal zone to depth of 20 m

**GENERAL DISTRIBUTION:** Korea; Japan; eastern Russia to East China Sea; **JEJU:** Seongsan, Supseom, Seogwipo

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** A rather fragile shell for its size that often cracks when dried.

**Genus: *Perna*: Philipsson, 1788**

**8 *Perna viridis* (Linnaeus, 1758)**

(Fig. 4)

**ORIGINAL DESCRIPTION:** Linnæus, C. 1758. *Systema naturæ per regna tria naturæ, secundum classes, ordines, genera, species, cum characteribus, differentiis, synonymis, locis. Tomus I. Editio decima, reformata. Holmiæ. (Salvius). 706.* (As *Mytilus viridis* Linnaeus, 1758) (Without illustration)

**TYPE LOCALITY:** Unknown (“O. Meridionali” (Southern ocean) (Linnaeus))

**HABITAT:** Byssally attached on rocks, rocky beaches, timbers, also sheltered areas in estuaries; from the intertidal zone to depth of 10 m

**GENERAL DISTRIBUTION:** Southern Korea and Japan (introduced) to Indo-Pacific; U.S.A. and Caribbean (Introduced); **JEJU:** Shinyang, Hwasoon

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Dead shells only. *P. viridis* may not be living in Jeju Island.

**Subfamily: Septiferinae Scarlato and Starobogatov, 1979**

**Genus: *Septifer* Dunker, 1848**

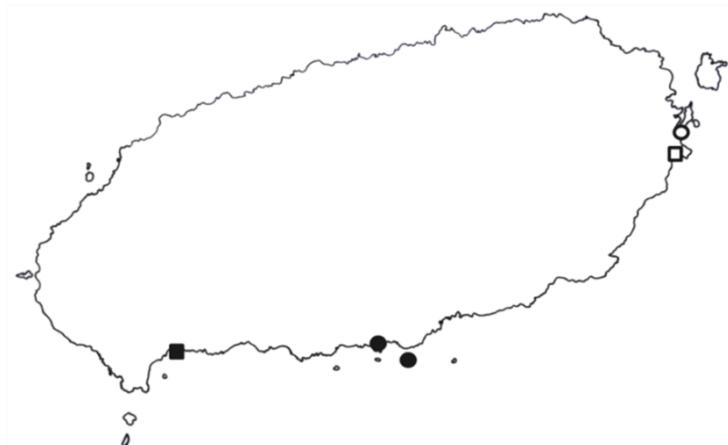

Fig. 4: Distribution of *M. coruscus* (●) and *Perna viridis* (■)

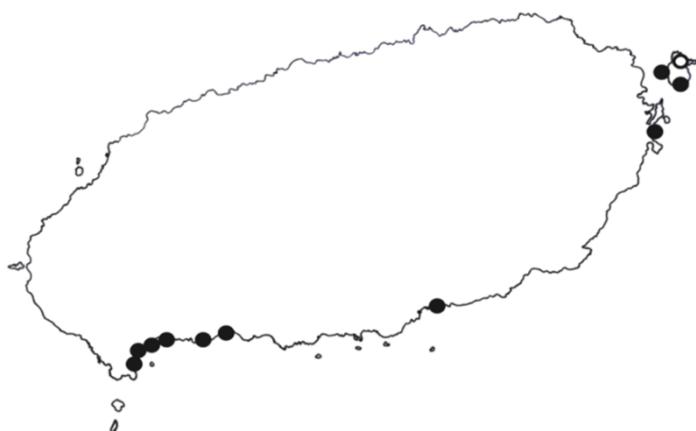

Fig. 5: Distribution of *S. bilocularis*

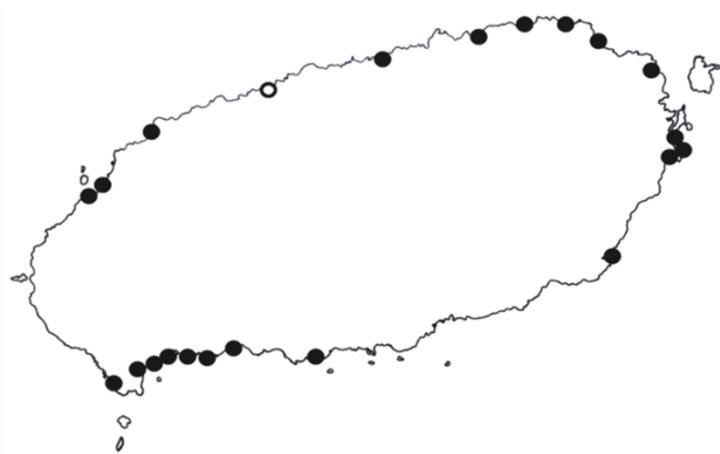

Fig. 6: Distribution of *S. excisus*

**9 *Septifer bilocularis* (Linnaeus, 1758)**

(Fig. 5)

**ORIGINAL DESCRIPTION:** Linnæus, C. 1758. *Systema naturæ per regna tria naturæ, secundum classes, ordines, genera, species, cum characteribus, differentiis, synonymis, locis.* Tomus I. Editio decima, reformata. Holmiæ. (Salvius). 705. (As *Mytilus bilocularis* Linnaeus, 1758) (Without illustration)

**TYPE LOCALITY:** Indian Ocean

**HABITAT:** Byssally attached to rocks among algae, near low tide mark, from intertidal zone to depth of 35 m

**GENERAL DISTRIBUTION:** Korea and Japan to Indo-West Pacific and Australia; introduced into UK and Eastern Mediterranean; **JEJU DISTRIBUTION:** Udo (Hagosudong), Udo (Sanhosa), Udo (Geomeollae), Seongsan, Wimi, Jungmun, Yerae, Hwasoon, Yongmeori, Sagyei, Songaksan

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Recognizable from *Septifer keenae* and *Septifer excisus* by its finer ribs and bluish interior.

**10 *Septifer excisus* (Wiegmann, 1837)**

(Fig. 6)

**ORIGINAL DESCRIPTION:** Wiegmann, A.F.A., 1837. *Ueber neue Arten der Gattung Tichogonia, Rossm. (Dreissena, Van Ben.) nach den Exemplaren des Berliner Museums. Archiv fur Naturgeschichte 3: 49. (*Tichogonia excisa* Wiegmann, 1837)* (Without illustration)

**TYPE LOCALITY:** Indian Ocean

**HABITAT:** Byssally attached to or under rocks from intertidal zone to depth of 35 m

**GENERAL DISTRIBUTION:** Korea and SE Japan to Indo-W. Pacific; **JEJU:** Iho,

Samyang, Bukchon-ri, Gimnyeong, Wolpyeong, Handong, Hado, Seopjikoji, Seongsan, Shinyang, Pyoseon, Seogundo, Jungmun, Yerae, Daepyeong, Hwasoon, Yongmeori, Sagyei, Hamo, Keumneung, Hyeopjae, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** *S. excisus* can be immediately distinguished from other members of the genus by the notch in its septal shelf, from which its name presumably derives. It can be further distinguished from other Indo-West Pacific members of its subgenus by the strong beading on the ribs and the frequently raised posterior adductor scar.

**11 *Septifer virgatus* (Wiegmann 1837)**

(Fig. 7) (Plate 5: I- L)

**ORIGINAL DESCRIPTION:** Wiegmann, A.F.A., 1837. Ueber neue Arten der Gattung *Tichogonia*, Rossm. (Dreissena, Van Ben.) nach den Exemplaren des Berliner Museums. Archiv fur Naturgeschichte 3:49. (As *Tichogonia virgata* Wiegmann, 1837) (Without illustration)

**TYPE LOCALITY:** Unknown

**HABITAT:** Byssally attached to rocks, often in clumps, on exposed rocky shores in high intertidal zone;

**GENERAL DISTRIBUTION:** Korea and Japan to Vietnam; **JEJU:** Iho, Jeju-shi, Samyang, Hamdeok, Bukchon-ri, Hado, Udo (Sanhosa), Jongdal-ri, Ojo-ri, Shinyang, Pyoseon, Wimi, Bomok, Supseom, Seogwipo, Munseom, Bumseom, Gangjeong, Jungmun, Yerae, Daepyeong, Hwasoon, Yongmeori, Sagyei, Songaksan, Gapado, Marado, Hamo, Gosan, Chagwi-do, Keumneung, Biyangdo, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** In large specimens collected at Sado Island and Sagami Bay, Japan, dentition

in both right and left valves has been encountered; habitat, size, or morphology does not differ. In addition, this alternate position is found in *keenae* as well. *S. virgatus* is a large species; specimens found in Japan are up to 50 mm, Dunker gives 55 mm and in Hong Kong specimens even attain 60 mm (Huber, 2010). A possible food species but its small size in Jeju Island inhibits commercial harvesting. *Mytilisepta virgata* (Wiegmann, 1837) is a synonym.

## 12 *Septifer keenae* (Nomura, 1936)

(Fig. 8)

**ORIGINAL DESCRIPTION:** Nomura, S. 1936. A new species of the genus *Septifer* from Japan (*S. keeni*). *Venus*, 6: 205-208. (As *Septifer keeni* Nomura, 1936)

**TYPE LOCALITY:** Northern Honshu, Japan

**HABITAT:** Byssally attached to rocks; from the intertidal zone to depth of 30m

**GENERAL DISTRIBUTION:** Korea and Japan; East Sea to East China Sea; **JEJU:** Dong-gwi, Iho, Hwabuk, Hamdeok, Bukchon-ri, Gimnyeong, Wolpyeong, Haengwon, Handong, Hado, Udo (Hagosudong), Udo (Sanhosa), Udo (Geomeollae), Jongdal-ri, Ojo-ri, Seongsan, Seopjikoji, Shinyang, Pyoseon, Namwon, Wimi, Bomok, Seogwipo, Beophwan, Gangjeong, Daepo, Jungmun, Yerae, Hwasoon, Yongmeori, Sagyei, Songaksan, Gapado, Marado, Hamo, Chagwido, Keumneung, Biyangdo, Hyeopjae, Gwideok, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** The small, trigonal Japanese species, generally whitish inside, is *S. keenae*. *Keenae* remains much smaller and attains only about half size of the larger *S. virgatus* (Huber, 2010). *Mytilisepta keenae* Nomura, 1936 is a synonym

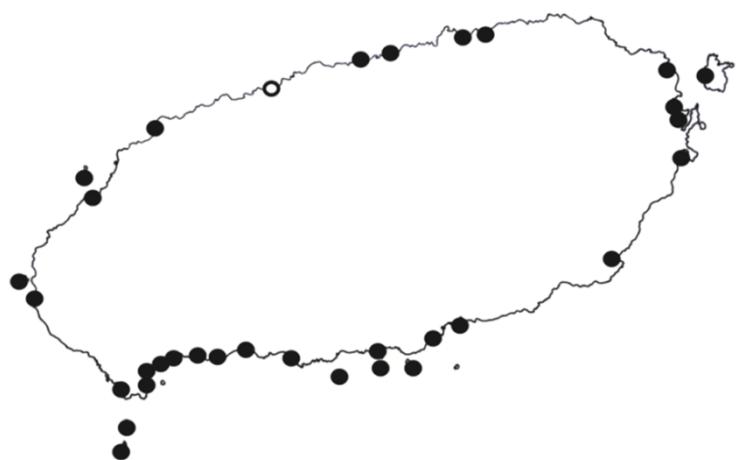

Fig. 7: Distribution of *S. virgatus*

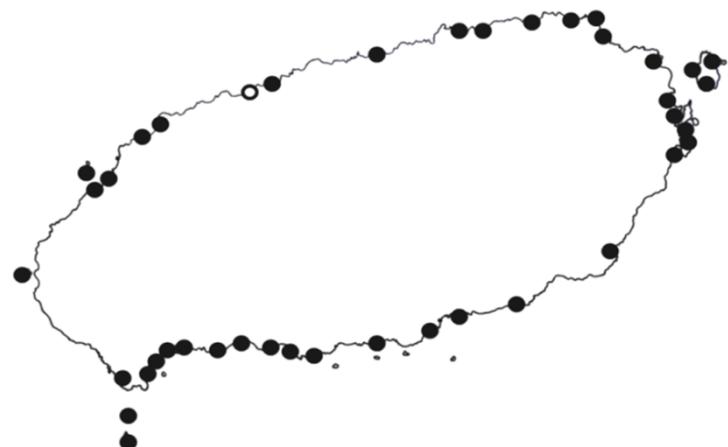

Fig. 8: Distribution of *S. keenae*

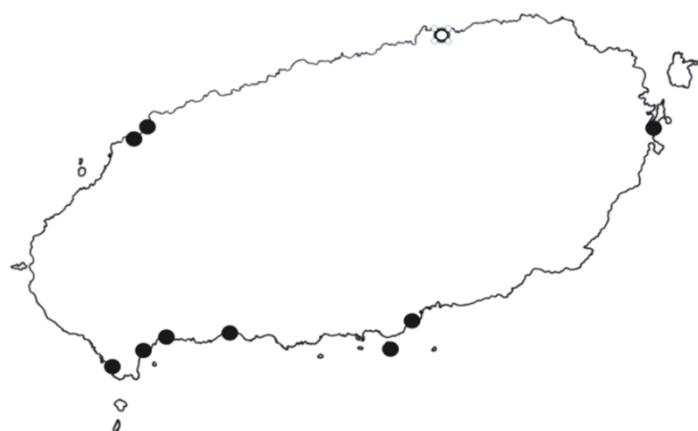

Fig. 9: Distribution of *M. modiolus*

**Subfamily: Modiolinae G. Termier & H. Termier, 1950**

**Genus: *Modiolus* Lamarck, 1799**

**13 *Modiolus modiolus* (Linnaeus, 1758)**

(Fig. 9)

**ORIGINAL DESCRIPTION:** Linnæus, C. 1758. *Systema naturæ per regna tria naturæ, secundum classes, ordines, genera, species, cum characteribus, differentiis, synonymis, locis.* Tomus I. Editio decima, reformata. Holmiæ. (Salvius): p. 706. (As *Mytilus modiolus* Linnaeus, 1758) (Without illustration)

**TYPE LOCALITY:** None (“M. Mediterraneo” (Linnaeus), but *M. modiolus* has not been reported from the Mediterranean Sea)

**HABITAT:** Shallowly burrowed in mud or sand bottoms, or byssally attached to rocks, shells, gravel, or in the holdfasts of *Laminaria*, from the intertidal zone to a depth of 146 m

**GENERAL DISTRIBUTION:** Korea and N. Japan to Arctic; south to California; south to New Jersey; northern Europe; **JEJU:** Hamdeok, Seongsan, Bomok, Supseom, Jungmun, Hwasoon, Sagyei, Hamo, Gwideok, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Circumboreal

**REMARKS:** *M. kurilensis* has been analyzed by Coan et al. (2000) and synonymized with *modiolus*. Recently, this view has also been accepted by Russian authors (Huber, 2010). *Modiolus kurilensis* Bernard, 1983 is a synonym.

**14 *Modiolus auriculatus* (Krauss, 1848)**

(Fig. 10)

**ORIGINAL DESCRIPTION:** Krauss, F. 1848. Die Südafrikanischen Mollusken. Eine Beitrag zur Kenntnis der Mollusken Des Kap- und Natallandes und zur Geographischen

Verbreitung Derselben, mit Beschreibung und Abbildung der Neuen Arten. Stuttgart, Verlag von Ebner & Seubert: p. 20, pl. 2; fig, 4. (As *Modiola auriculatus* Krauss, 1848)

**TYPE LOCALITY:** Natal, South Africa

**HABITAT:** Byssally attached to rocks, in tidepools and in crevices, also on dead coral blocks and among rubble, from the intertidal zone to depth of 35 m

**GENERAL DISTRIBUTION:** Korea and S. Japan to Indo-Pacific; Mediterranean: **JEJU:** Jungmun, Yerae, Hwasoon, Yongmeori, Sagyei, Hamo, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** *M. auriculatus* is very common and also highly variable in color. It is typically brownish, with umbos lighter ventrally. The interior is usually purple dorsally and whitish ventrally; but dark-purplish and lighter yellowish, orange, and red colors occur.

## 15 *Modiolus nipponicus* (Oyama 1950)

(Fig. 11) (Plate 4: O-R)

**ORIGINAL DESCRIPTION:** Oyama, K. 1950. Studies of fossil molluscan biocoenosis, No. 1. Biocoenological studies on the mangrove swamps, with description of new species from Yatuo Group. Report of Geological Survey of Japan, 132pp. 1–15. pls. 1–3. (As *Volsella nipponicus* Oyama 1950)

**TYPE LOCALITY:** Japan

**HABITAT:** Byssally attached to rocks and other hard substrates, from the intertidal zone to depth of 40 m

**GENERAL DISTRIBUTION:** Korea and Japan to West Pacific; **JEJU:** Iho, Handong, Udo (Sanhosa), Jongdal-ri, Seongsan, Seopjikoji, Shinyang, Supseom, Bumseom, Jungmun, Yerae, Hwasoon, Yongmeori, Sagyei, Hamo, Biyangdo, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

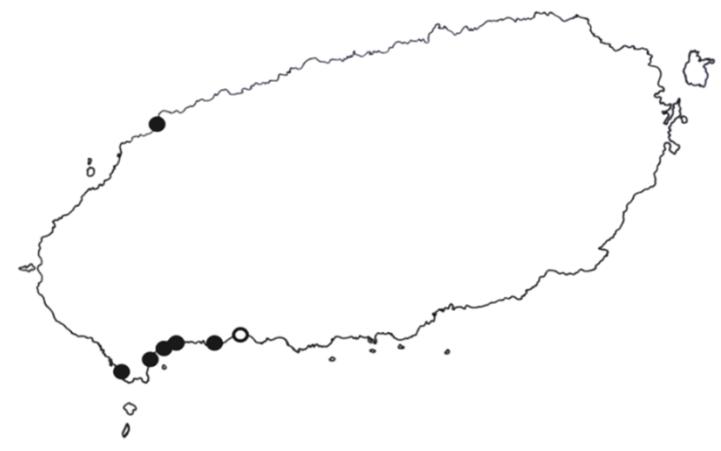

Fig. 10: Distribution of *M. auriculatus*

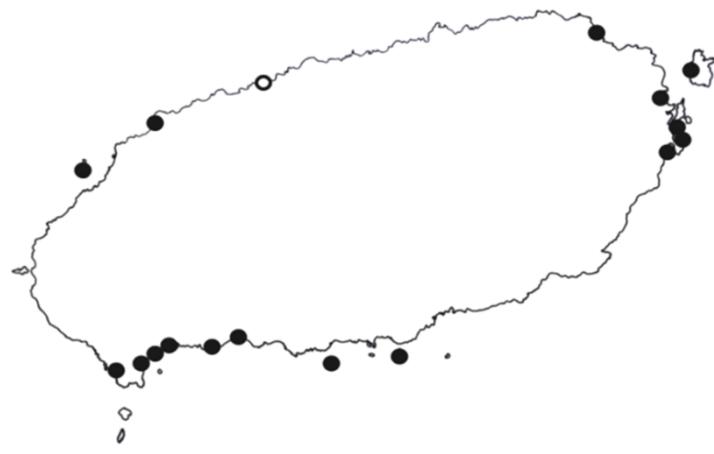

Fig. 11: Distribution of *M. nipponicus*

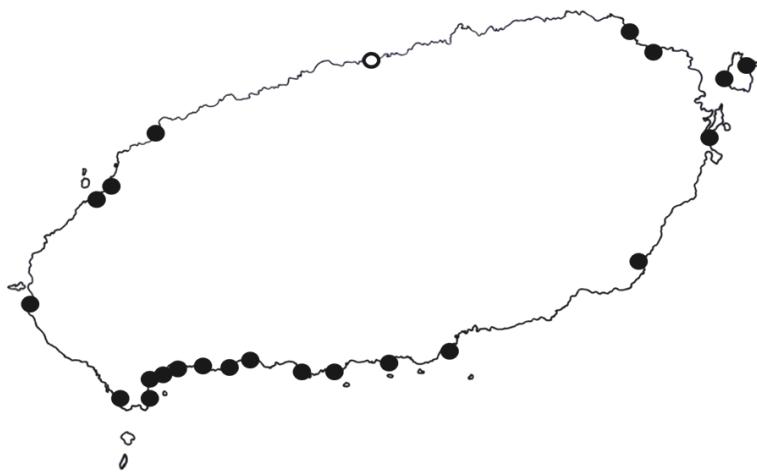

Fig. 12: Distribution of *B. mutabilis*

**REMARKS:** *M. nipponicus* seems much more widely distributed than *auriculatus*, which occurs occasionally in reddish colors. These two species appear to occur partly within the same areas. Okutani (2000) depicted both from Japan and mentioned differences in color and shape (Huber, 2010). *Modiolus agripetus* (Iredale, 1939) is a synonym.

**Subfamily: Brachidontinae "Thiele" Nordsieck, 1969**

**Genus: *Brachidontes* Swainson, 1840**

**16 *Brachidontes mutabilis* (Gould, 1861)**

(Fig. 12)

**ORIGINAL DESCRIPTION:** Gould, A.A. 1861. *Descriptions of shells collected by the North Pacific Exploring Expedition (continued).* Proceedings of the Boston Society of Natural History 8: 38. (As *Mytilus mutabilis* Gould, 1861) (Without illustration)

**TYPE LOCALITY:** Kagoshima Bay, Kyushu, Japan

**HABITAT:** Byssally attached to rock, shells and stones in intertidal zone

**GENERAL DISTRIBUTION:** Southern Korea and Japan to W. Pacific; **JEJU:** Jeju-shi, Handong, Sehwa, Udo (Hagosudong), Udo (Sanhosa), Seongsan, Pyoseon, Bomok, Seogwipo, Seogundo, Gangjeong, Jungmun, Yerae, Daepyeong, Hwasoon, Yongmeori, Sagyei, Songaksan, Hamo, Gosan, Keumneung, Hyeopjae, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** This species has been observed using its byssal threads to trap muricid predators (Ishida and Iwasaki, 1999). *Hormomya (Brachidontes) mutabilis* (Gould, 1861) and *Hormomya mutabilis* (Gould, 1861) are synonyms.

**Subfamily: Crenellinae Gray, 1840**

**Genus: *Exosiperna* Iredale, 1929**

**17 *Exosiperna kuroharai* Habe, 1961**

(Fig. 13)

**ORIGINAL DESCRIPTION:** Habe, T., 1961. Four new bivalves from Japan. Venus 21 (2):152-156. (As *Exosiperna kuroharai* Habe, 1961)

**TYPE LOCALITY:** Southwestern Shikoku, Japan

**HABITAT:** Sand and gravel, from depths of 100-300 m

**GENERAL DISTRIBUTION:** Korea; S. Japan; **JEJU:** Seongsan (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**Genus: *Limnoperna* Rochebrune, 1882**

**18 *Limnoperna atrata* (C. E. Lischke 1871)**

(Fig. 14)

**ORIGINAL DESCRIPTION:** Lischke, C. E. 1871. Diagnosen neuer Meeres-Conchylien von Japan. Malakozoologische Blätter, xviii 1871: p. 44. (As *Mytilus atratus* Lischke, 1871) (Without illustration)

**TYPE LOCALITY:** Nagasaki, Kyushu, Japan

**HABITAT:** Marine-estuarine, sheltered situations; byssally attached to rocks or shells, from the high intertidal zone to depth of 1 m

**GENERAL DISTRIBUTION:** Korea and Japan to W. Pacific; **JEJU:** Hamdeok, Handong, Yongmeori, Hyeopjae

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** *Xenostrobus atrata* (Lischke, 1871) is a synonym.

**Subfamily: Musculinae Iredale, 1939**

**Genus: *Gregariella* Monterosato, 1884**

Fig. 13: Distribution of *E. kuroharai* (●), *Gregariella barbata* (■), and *G. coralliophaga* (▲)

Fig. 14: Distribution of *Limnoperna atrata*

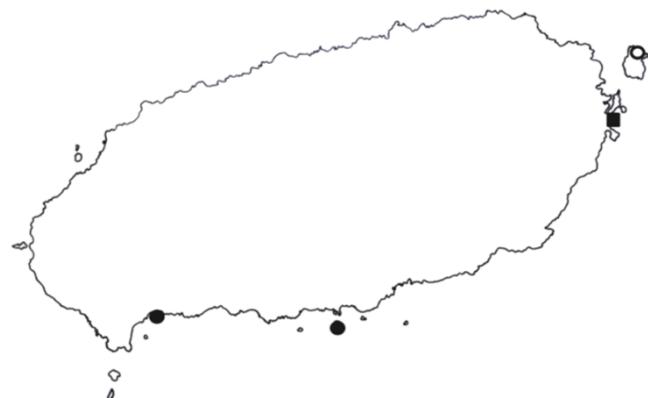

Fig. 15: Distribution of *M. (M.) pusio* (●) and *M. (Modiolarca) cumingianus* (■)

## **19 *Gregariella barbata* (Reeve, 1858)**

(Fig. 13)

**ORIGINAL DESCRIPTION:** Reeve, L. A., 1857–58. Monograph of the genus *Lithodomus*.

In: *Conchologia Iconica*, 10: 5 Pls. (+ descriptions). London, Reeve Brothers, pl. 5; fig. 27.

[January, 1858] (As *Lithodomus barbata* Reeve, 1858)

**TYPE LOCALITY:** Sydney, Australia

**HABITAT:** Under stones, on rocks, nestling in cavities of larger shells, also embedded in sandy clay and mud; from the intertidal zone to depth of 90 m

**GENERAL DISTRIBUTION:** Korea and Japan to Thailand, southern Australia; New Zealand; **JEJU:** Hwasoon (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Replaces *Trichomusculus semigranatus* (Reeve, 1858). This species is referable to Reeve's *Lithodomus barbata*. Reeve, 1858 stated that *semigranatus* is "grain-striated only on the posterior area"; however Okutani (2000 p. 869 sp. 36), states that the Japanese species has "radial ribs present in anterior and posterior regions" as also noted by Reeve for his *Lithodomus barbatus*. *G. barbata* is a small species, rarely more than 10 mm in length with strongly-branched periostracal hairs (Huber, 2010). *Trichomusculus semigranatus* jap. auctt. non Reeve 1858; *Trichomusculus barbatus* (Reeve, 1858) are synonyms.

## **20 *Gregariella coralliophaga* (Gmelin, 1791)**

(Fig. 13)

**ORIGINAL DESCRIPTION:** Gmelin, J. F. 1791. Caroli a Linné, systema naturae. Lipsiae (Leipzig), (Beer). 13. Tom. I. Pars VI. (Vol. 1, part 6) pp. 3351, 3352. (As *Mytilus coralliophaga* Gmelin, 1791) (Without illustration)

**TYPE LOCALITY:** Caribbean; Indo-Pacific

**HABITAT:** Chemically boring in corals (*Porites sp*), limestone, and shells; from the intertidal zone to depths of 20 m

**GENERAL DISTRIBUTION:** Korea and Japan to Indo-West Pacific; Caribbean; **JEJU:** Seongsan (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** This species also occurs in Florida and Brazil. Originally, *G. coralliophaga* was described from both the Western Atlantic and the Indo-Pacific. This rare cosmopolitan distribution is accepted by virtually all modern authors. However, a genetic confirmation is at present lacking (Huber, 2010).

**Genus: *Musculus* Röding, 1798**

**21 *Musculus (Musculus) pusio* (A. Adams 1862)**

(Fig. 15)

**ORIGINAL DESCRIPTION:** Adams A. 1862a. On some new species of acephalous Mollusca from the Sea of Japan. *Annals and Magazine of Natural History, Series 3* (9): 229. (As *Modiolaria pusio* A. Adams, 1862) (Without illustration)

**TYPE LOCALITY:** Mishima, East Sea, Japan

**HABITAT:** Byssally attached to rock, gravel and seaweed in soft mud, from the intertidal zone to depth of 20 m

**GENERAL DISTRIBUTION:** Western part of East Sea to East China Sea; **JEJU:** Udo (Hagosudong), Munseom, Hwasoon

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-lowboreal

**22 *Musculus (Musculus) viridulus* (H. Adams 1871)**

(Fig. 16) (Plate 4: K-N (as *nanus*); S-T)

**ORIGINAL DESCRIPTION:** Adams, H., 1871. Descriptions of twenty-six new species of shells collected by Robert McAndrew, Esq., in the Red Sea. *Proceedings of the Zoological Society of London* 1870: 792. (As *Crenella (Modiolaria) viridulus* H. Adams, 1871) (Without illustration)

**TYPE LOCALITY:** Red Sea

**HABITAT:** Rocky and sandy areas, byssally attached to sand grains, also nestling on rocks and on large shells, from the intertidal zone to depth of 70 m

**GENERAL DISTRIBUTION:** (Southern Korea and southern Japan to Indo-W. Pacific;

**JEJU:** Wolpyeong, Udo (Sanhosa), Bomok, Munseom, Hwasoon

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** *Musculus nanus* has been described by Dunker, 1857 from Port Lincoln, Southern Australia. From all data available, this species is restricted to S. Australia. The species referred to as *M. nanus*, from the Philippines to Japan, is actually *M. viridulus*. Adams' "viridulus" from the Red Sea has been described as a small greenish species, and is widely distributed, being also reported from Japan. This is a minute, ovate, compressed, fragile species. It is often found in reddish and brownish colors, but whitish, reddish or greenish specimens may occur in the same locality; it is smaller than 10 mm (Huber, 2010). "M. nanus" in Okutani (2000) is *M. viridulus* (Huber, 2010), exhibiting some variability in shape. According to Moolenbeek (2009), *Musculus viridulus* (H. Adams, 1871), has a rounded shape, and the one shell figured by Oliver (1992) looks very similar to *M. nanus*.

## 23 *Musculus (Modiolarca) cumingianus* ("Dunker" Reeve 1857)

(Fig. 15)

**ORIGINAL DESCRIPTION:** Monograph of the genus *Modiola*. In: *Conchologia Iconica*,

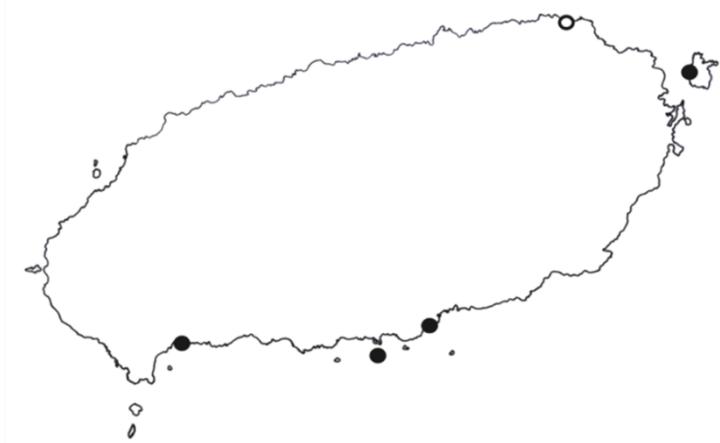

Fig. 16: Distribution of *M. (M.) viridulus*

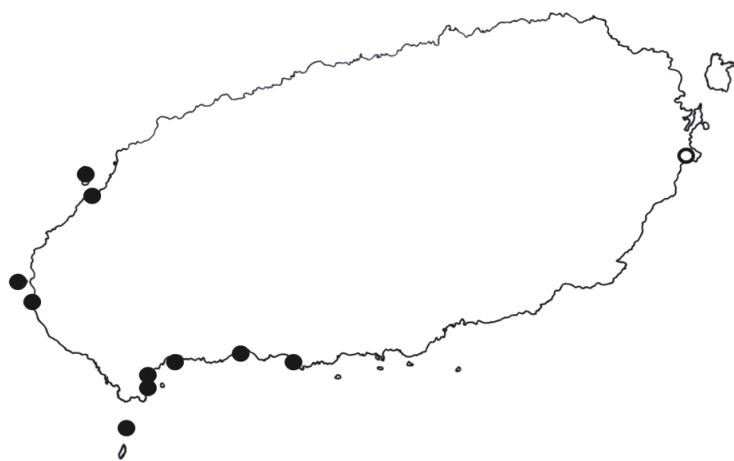

Fig. 17: Distribution of *Arcuatula senhousia*

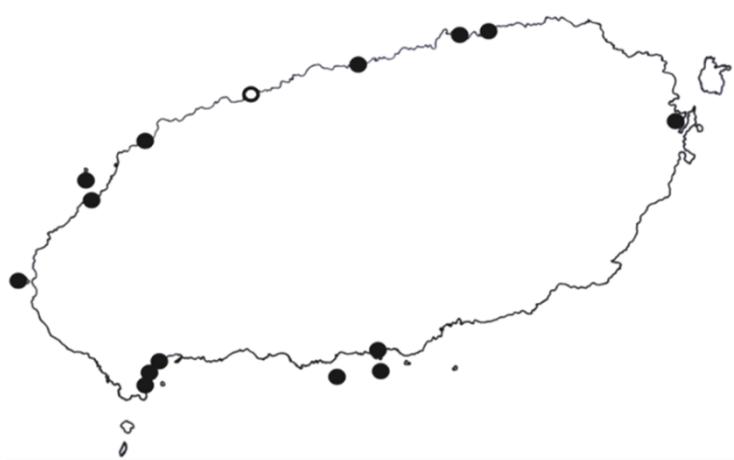

Fig. 18: Distribution of *L. lischkei*

10: 11 Pls. (+ descriptions). London, Reeve Brothers, Pl. IX, fig. 63 (a, b). (As *Modiola cumingiana* Reeve, 1857)

**TYPE LOCALITY:** Moreton Bay, Queensland, Australia

**HABITAT:** Parasitic in tests of ascidians, on rocky bottoms, from intertidal zone to depth of 56 m

**GENERAL DISTRIBUTION:** Southern Korea and southern. Japan to Indo-W. Pacific;

**JEJU:** Seongsan (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** *Musculus cumingiana* (Reeve, 1857) is a synonym.

**Subfamily: Arcuatulinae Scarlato & Starobogatov, 1979**

**Genus: *Arcuatula* Jousseaume in Lamy, 1919**

**24 *Arcuatula senhousia* (Benson in Cantor 1842)**

(Fig. 17)

**ORIGINAL DESCRIPTION:** Benson W. H. (1842). Mollusca. In: Cantor, Th. "General features of Chusan, with remarks on the flora and fauna of that island". *Annals and Magazine of Natural History* 9: 486-489. (Reprint (1842) pages 1-38), 34. (As *Modiola senhousia* Benson in Cantor 1842) (Without illustration)

**TYPE LOCALITY:** Zhousan (Chusan), Zhejiang Province, China

**HABITAT:** Sheltered bays, burrowing in soft mud, also among eelgrass, occasionally building nests by byssal threads, from the intertidal zone to depth of 20 m

**GENERAL DISTRIBUTION:** Eastern Russia to Vietnam; Kurile Is. to northwest Mexico (introduced); Mediterranean (introduced); S. Australia (introduced); New Zealand (introduced); **JEJU:** Shinyang, Gangjeong, Jungmun, Hwasoon, Sagyei, Songaksan, Gapado, Gosan, Chagwido, Keumneung, Biyangdo

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-lowboreal

**REMARKS:** *Musculista* is here declared synonymous to the older *Arcuatula*. In Japan greenish-yellowish specimens with brown streaks have been found. Nowadays, *Arcuatula senhousia* is widely introduced in various regions and has to be regarded as virtually cosmopolitan (Huber, 2010). *Musculista senhousia* (Benson, 1842) is a synonym.

**Subfamily: Lithophaginae H. & A. Adams, 1857**

**Genus: *Lithophaga* Carpenter, 1856**

**25 *Lithophaga (Leiosolenus) lischkei* (Huber, 2010)**

(Fig. 18)

**ORIGINAL DESCRIPTION:** Huber, M. 2010. Formal description and designation of holotypes for 23 bivalve species and type species for 2 bivalve genera (Mollusca: Bivalvia). *Conchylia* 41(1): 1-32.

**TYPE LOCALITY:** Tokyo, Japan

**HABITAT:** Chemically boring into soft rocks, corals (*Montipora*), limestone, and other shells, from the intertidal zone to depth of 20 m

**GENERAL DISTRIBUTION:** Korea and Japan to Vietnam; **JEJU:** Dong-gwi, Jeju-shi, Hamdeok, Bukchon-ri, Ojo-ri, Seogwipo, Munseom, Bumseom, Yongmeori, Sagyei, Songaksan, Chagwido, Keumneung, Biyangdo, Gwideok

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Non *Lithodomus curta* Stoliczka, 1870, an Indian fossil. *Lischkei* is named after the original author. Both *Lithophagus* and *Lithodomus* are synonyms of *Lithophaga*, and both species are closer to *Leiosolenus*, than to *Lithophaga*. Although Lischke's type has not been located, *lischkei* is consistently recognized in Japan literature and is a quite common Japanese species (Huber, 2010). *Lithophaga (Leiosolenus) curta* (Lischke, 1874) is a

synonym.

**26 *Lithophaga* cf. *malaccana* (Reeve 1857)**

(Fig. 19)

**ORIGINAL DESCRIPTION:** Reeve, L. A., 1857–58. Monograph of the genus *Lithodomus*. In: *Conchologia Iconica*, 10: 5 Pls. (+ descriptions). London, Reeve Brothers, pl. 4, fig. 20. [October, 1857] (As *Lithodomus malaccana* Reeve, 1857)

**TYPE LOCALITY:** Malaysia

**HABITAT:** Chemically boring mainly in dead corals but also in calcareous rocks and shells, from the intertidal zone to depth of 40m

**GENERAL DISTRIBUTION:** Southern Korea and southern Japan to Indo-Pacific; **JEJU:** Munseom, Keumneung, Biyangdo

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** First report from Korea. This species exhibits variability in shape from rather narrow to broader. *Malaccana* occurs occasionally with almost smooth incrustations; however, typically, these are strongly wrinkled (Huber, 2010).

**Order: ARCIDA Gray, 1854**

**Superfamily: Arcoidea Lamarck, 1809**

**Family: ARCIDAE Lamarck, 1809**

**Subfamily: Arcinae Lamarck, 1809**

**Genus: *Arca* Linnaeus, 1758**

**27 *Arca avellana* Lamarck, 1819**

(Fig. 20) (Plate 1: E-H)

Fig. 19: Distribution of *L. cf. malaccana*

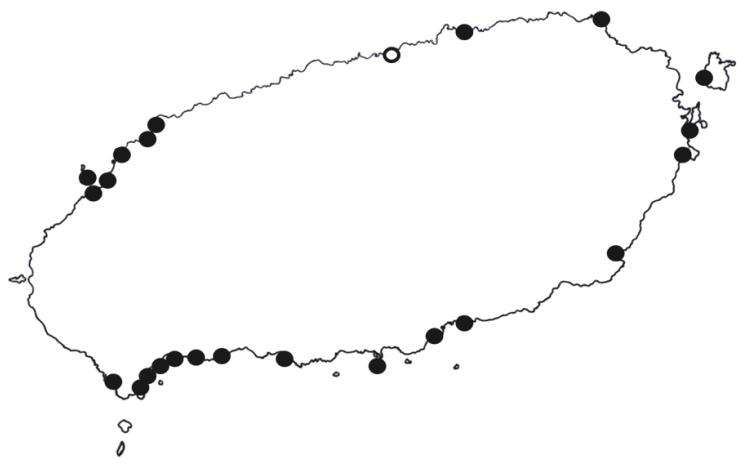

Fig. 20: Distribution of *Arca avellana*

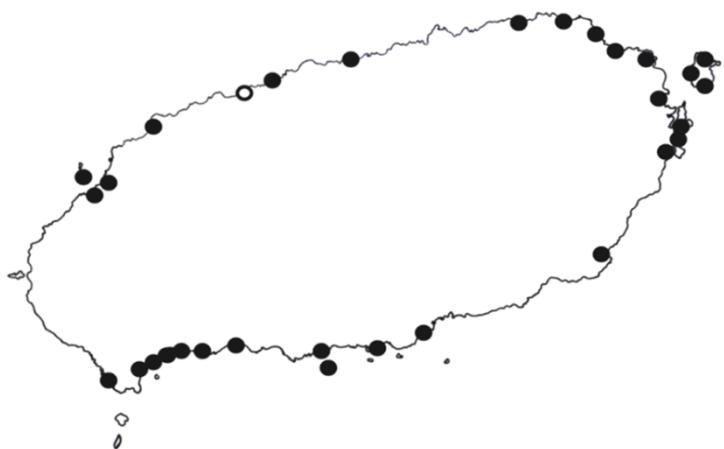

Fig. 21: Distribution of *A. boucardi*

**ORIGINAL DESCRIPTION:** Lamarck, J. P. B. A de Monet de. 1819. Histoire naturelle des animaux sans vertèbres, présentant les caractères généraux et particuliers de ces animaux, leur distribution, leurs classes, leurs familles, leurs genres, et la citation des principales espèces qui s'y rapportent; précédée d'une introduction offrant la détermination des caractères essentiels de l'animal, sa distinction du végétal et des autres corps naturels, enfin, l'exposition des principes fondamentaux de la zoologie. Tome sixième. Ire. partie. Paris. - pp. i-vi [= 1-6], 1-343. (As *Arca avellana* Lamarck, 1819) (Without illustration)

**TYPE LOCALITY:** Suez

**HABITAT:** Sheltered bays and coral reefs; byssally attached to rocks, shells, coral, or coarse sand, also in crevices, from the intertidal zone to depth of 100 m.,

**GENERAL DISTRIBUTION:** Korea and Japan to Indo-W. Pacific; South Africa; **JEJU:** Samyang, Hamdeok, Haengwon, Udo (Sanhosa), Seongsan, Shinyang, Pyoseon, Wimi, Bomok, Munseom, Gangjeong, Yerae, Daepyeong, Hwasoon, Yongmeori, Sagyei, Songaksan, Hamo, Keumneung, Biyangdo, Hyeopjae, Suwon, Gwideok, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** May be the only *Arca* species occurring on Jeju Island; specimens attributed to *A. boucardi* may instead be elongated forms of *A. avellana* (K. Lutaenko, pers. comm.).

## 28 *Arca boucardi* Jousseaume, 1894

(Fig. 21)

**ORIGINAL DESCRIPTION:** Jousseaume, F., 1894. - Description d'une espèce nouvelle de coquille du Japon du genre *Arca*. *The Humming Bird* 4: 41-56, (As *Arca boucardi* Jousseaume, 1894) (Without illustration)

**TYPE LOCALITY:** "Mers du Japon" (Japanese waters)

**HABITAT:** Byssally attached to rocks and stones, from intertidal zone to depth of 68m

**GENERAL DISTRIBUTION:** Southern Okhotsk Sea to Vietnam; **JEJU:** Dong-gwi, Iho, Jeju-shi Gimnyeong, Wolpyeong, Handong, Sehwa, Hado, Udo (Hagosudong), Udo (Sanhosa), Udo (Geomeollae), Jongdal-ri, Seongsan, Seopjikoji, Shinyang, Pyoseon, Bomok, Seogwipo, Seogundo, Bumseom, Jungmun, Yerae, Daepyeong, Hwasoon, Yongmeori, Sagyei, Hamo, Keumneung, Biyangdo, Hyeopjae, Gwakji,

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-lowboreal

**REMARKS:** *Arca boucardi* may not occur in Jeju Island. (See previous comment on *A. avellana*.)

**Genus: *Barbatia* Gray, 1842**

**29 *Barbatia trapezina* (Lamarck, 1819)**

(Fig. 22)

**ORIGINAL DESCRIPTION:** Lamarck, J. P. B. A de Monet de 1819. Histoire naturelle des animaux sans vertèbres, présentant les caractères généraux et particuliers de ces animaux, leur distribution, leurs classes, leurs familles, leurs genres, et la citation des principales espèces qui s'y rapportent; précédée d'une introduction offrant la détermination des caractères essentiels de l'animal, sa distinction du végétal et des autres corps naturels, enfin, l'exposition des principes fondamentaux de la zoologie. Tome sixième. Ire. Partie, Paris. 41. (As *Arca trapezina* Lamarck, 1819) (Without illustration)

**TYPE LOCALITY:** Timor Island

**HABITAT:** Byssally attached to rocks and coral blocks, from the intertidal zone to depth of 30m

**GENERAL DISTRIBUTION:** Korea and Japan to Indo-W. Pacific; **JEJU:** Udo (Sanhosa), Songsan, Bomok, Seogwipo, Munseom, Seogundo, Jungmun, Yerae, Hwasoon, Yongmeori,

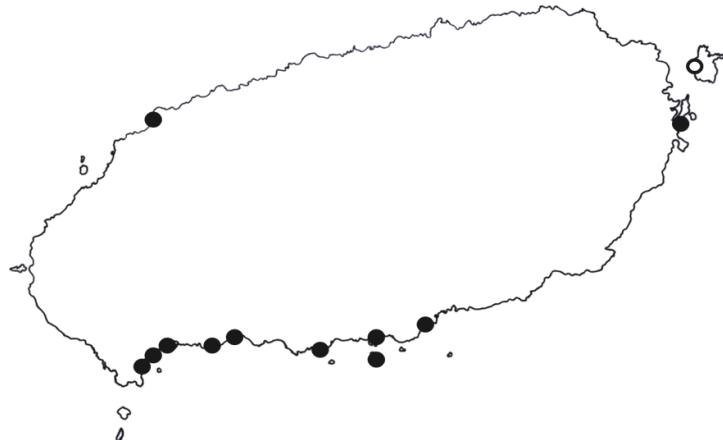

Fig. 22: Distribution of *B. trapezina*

Fig. 23: Distribution of *B. (S.) virescens*

Fig. 24: Distribution of *B. (U.) stearnsi*

Sagyei, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Synonyms are: *Barbatia (Abarbatia) decussata* (Sowerby I, 1833), *Arca decussata* (Sowerby I, 1833), *Byssocardia decussata* Sowerby I, 1833.

**30 *Barbatia (Savignyarca) virescens* (Reeve, 1844)**

(Fig. 23) (Plate 1: O-R)

**ORIGINAL DESCRIPTION:** Reeve, L A. 1844. Descriptions of new species of *Arca*, chiefly collected by H. Cuming, Esq. in the Philippine Islands. *Proceedings of the Zoological Society of London*, 12, 124-125. (As *Arca virescens* Reeve, 1844) (Without illustration; first illustration in Conch. Icon. (Reeve, 1844))

**TYPE LOCALITY:** Catbalonga, Samar Island, Philippines

**HABITAT:** Byssally attached to rocks, under stones, and in crevices, from the intertidal zone to depth of 20 m

**GENERAL DISTRIBUTION:** Japan to Vietnam; **JEJU:** Hamdeok, Handong, Hado, Udo (Hagosudong), Udo (Sanhosa), Jongdal-ri, Seongsan, Shinyang, Pyoseon, Bomok, Munseom, Yerae, Hwasoon, Yongmeori, Sagyei, Keumneung

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Periostracum eroded in central shell area, with velvety, dark greenish periostracum around edge of shell. Variable in shape, usually white, occasionally greenish from algae, often deformed.

**31 *Barbatia (Ustularca) stearnsi* (Pilsbry, 1895)**

(Fig. 24) (Plate 1: S-V)

**ORIGINAL DESCRIPTION:** Pilsbry. 1895. Catalogue of the Marine Mollusks of Japan,

(Nemoto, Boshiu; Yokohama, Japan). P. 148, 149, pl. 3, fig. 8-10. (As *Arca stearnsi* Pilsbry, 1895)

**TYPE LOCALITY:** Japan: “Nemoto, Boshiu, and Yokohama” (Pilsbry)

**HABITAT:** Byssally attached to rocks, in coarse or muddy sand, from the intertidal zone to depth of 83 m.

**GENERAL DISTRIBUTION:** Japan to South China Sea; **JEJU:** Iho, Jeju-si, Hamdeok, Bukchon-ri, Gimnyeong, Wolpyeong, Haengwon, Handong, Sehwa, Udo (Hagosudong), Udo (Sanhosa), Jongdal-ri, Songsan, Seopjikoji, Shinyang, Pyoseon, Bomok, Supseom, Seogwipo, Munseom, Seogundo, Gangjeong, Jungmun, Yerae, Daepyeong, Hwasoon, Yongmeori, Sagyei, Songaksan, Hamo, Keumneung, Biyangdo, Hyeopjae, Gwideok, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** A common shell in beach drift. *Stearnsi* is typically trapezoidal with a very fine, spicate periostracum (Huber, 2010).

**Genus: *Acar* Gray, 1857**

**32    *Acar plicata* ("Chemnitz" Dillwyn 1817)**

**(Fig. 25) (Plate 1: I-J)**

**ORIGINAL DESCRIPTION:** Dillwyn, Lewis W. 1817. A Descriptive Catalogue of Recent Shells Arranged According to the Linnean Method with Particular Attention to Synonomy, Vol. 1. John and Arthur Arch, London. 227, 228. (As *Arca plicata* Dillwyn, 1817) (Without illustration)

**TYPE LOCALITY:** Red Sea

**HABITAT:** byssally attached to rocks and gravel, from intertidal zone to depth of 20 m

**GENERAL DISTRIBUTION** Korea and Japan to Indo-Pacific; South Africa; Hawaii, Clipperton Island, Panama; Mediterranean (Lessepsian); **JEJU:** Handong, Hado, Jongdal-ri,

Seopjikoji, Shinyang, Pyoseon, Munseom, Hwasoon, Yongmeori, Sagyei, Hamo, Keunmeung, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** *Acar plicatum* (Dillwyn, 1817) is a synonym.

**Genus:** *Hawaiarca* Dall, Bartsch & Rehder, 1938

**33 *Hawaiarca uwaensis* (Yokoyama, 1928)**

(Fig. 26)

**ORIGINAL DESCRIPTION:** Yokoyama, M., 1928b: Pliocene shells from Hyuga. Journal of the Faculty of Science, Imperial University of Tokyo, Section 2, vol. 2, pt. 7, p. 349; Pl. 67, fig. 13, 14. (As *Arca uwaensis* Yokoyama, 1928)

**TYPE LOCALITY:** Hyuga, Kyushu, Japan

**HABITAT:** Byssally attached to rocks, shells, and sunken wood, from depth of 10-500 m

**GENERAL DISTRIBUTION:** Korea and Japan to Vietnam; **JEJU:** Hwasoon (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**Genus:** *Mesocibota* Iredale, 1939

**34 *Mesocibota bistrigata* (Dunker 1866)**

(Fig. 26)

**ORIGINAL DESCRIPTION:** Dunker, W.R. 1858-1878. *Novitates conchologicae. Abbildung und Beschreibung neuer Conchylien. 11. Abtheilung. Meeres-Conchylien.* Cassel (Fischer). 8, pl. 30, figs. 4, 5, 67. (As *Arca bistrigata* Dunker, 1866.)

**TYPE LOCALITY:** Mumbai, India, and China

**HABITAT:** In bays, byssally attached to rocks, in shell debris and muddy areas, at depth of

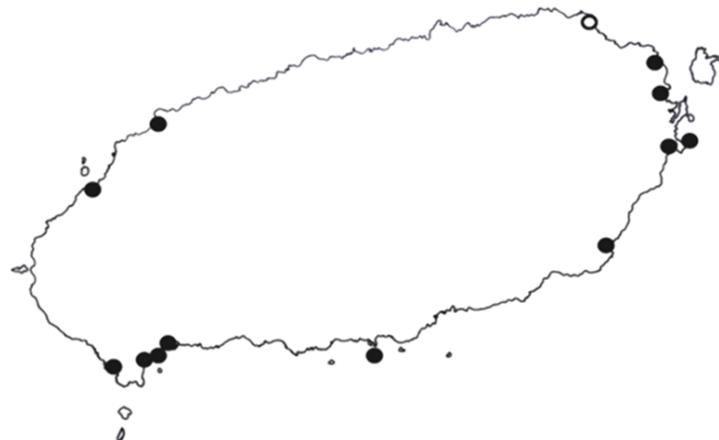

Fig. 25: Distribution of *A. plicata*

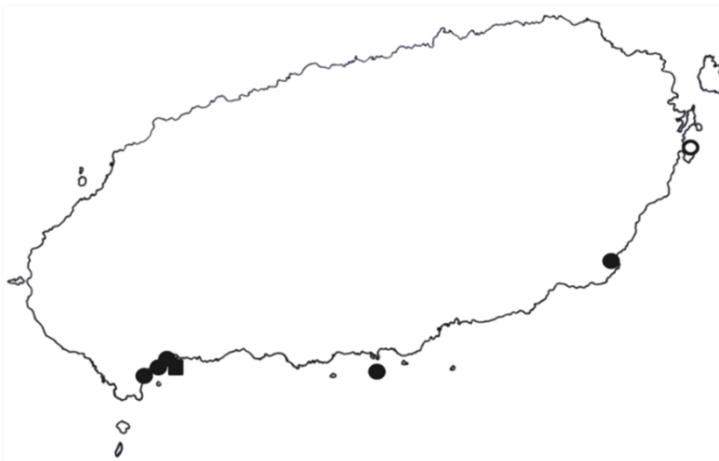

Fig. 26: Distribution of *Mesocibota bistrigata* (●) and *H. uwaensis* (■)

Fig. 27: Distribution of *B. (B.) kyurokusimana* (●) and *Samacar strabo* (■)

3-55 m

**GENERAL DISTRIBUTION:** Southern Korea and Japan to Indo-W. Pacific; **JEJU:** Seopjikoji, Pyoseon, Munseom, Hwasoon, Yongmeori, Sagyei

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical ??

**REMARKS:** *M. bistrigata* is the type of *Nipponarca*. *Nipponarca bistrigata* (Dunker, 1866) is a synonym.

**Subfamily: Bathyarcinae Scarlato & Starobogatov, 1979**

**Genus: *Bathyarca* Kobelt, 1891**

**35 *Bathyarca (Bathyarca) kyurokusimana* (Nomura & Hatai 1940)**

(Fig. 27)

**ORIGINAL DESCRIPTION:** Nomura, S. and Hatai, K. 1940. The marine fauna of Kyuroku-sima and its vicinity, Northeast Honshu, Japan. Saito Ho-on Kai Museum Research Bulletin. 19: 75, pl. 4, fig.1a, b. (As *Bathyarca*. (*Microcucullaea*) *kyurokusimana* Nomura & Hatai 1940)

**TYPE LOCALITY:** Kyuroku-sima, northwest Honshu, Japan

**HABITAT:** Fine sand and mud, from depth of 20-500 m

**GENERAL DISTRIBUTION:** Northern Japan, East Sea, and southern Korea to East China Sea; **JEJU:** Seongsan (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-lowboreal

**REMARKS:** Japanese authors have synonymized *B. kyurokusimana* with *anaclima* from the Indian Ocean to Indonesia and the Philippines, although Okutani (2000) lists only *B. kyurokusimana*. However, it appears that these two species are different: *B. kyurokusimana* has a sculpture of fine radial riblets and growth striae giving a cancellate appearance (Okutani, 2000), as opposed to *B. anaclima* which has fewer radial riblets and is smaller. The figure in

Min (2004) appears to be a specimen of *B. kyurokusimana*.

**Genus: *Samacar* Iredale, 1936**

**36 *Samacar strabo* (Hedley, 1915)**

(Fig. 27)

**ORIGINAL DESCRIPTION:** Hedley, C. 1915. Studies on Australian Mollusca, Part XII.

Proceedings of the Linnean Society of New South Wales. 39. 697, pl. 78, figs. 19, 20. (As *Arca strabo* Hedley, 1915)

**TYPE LOCALITY:** Port Macquarie, New South Wales, Australia

**HABITAT:** Byssally attached to rocks and sponges, at depths from 20-500 m (Higo *et al.*, 1999)

**GENERAL DISTRIBUTION:** Korea and Japan to Indo-West Pacific; South Africa (Check);

**JEJU:** Seongsan (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** For a detailed discussion and description of this species, see Kamenev (2007).

**Subfamily: *Anadarinae* Reinhart, 1935**

**Genus: *Anadara* Gray, 1847**

**37 “*Anadara (Scapharca) inaequivalvis*” (J. G. Bruguière 1789)**

(Fig. 28) (Plate 2: A-F)

**ORIGINAL DESCRIPTION:** Bruguiere, J. G., (1789) Encyclopedie Methodique. Histoire naturelle des vers. Paris, Vol. 1 (1), 1-344. (As *Arca inaequivalvis* Bruguière, 1789) (Without illustration)

**TYPE LOCALITY:** Tranquebar, India

**GENERAL DISTRIBUTION:** Korea; Japan (Min, 2004; Okutani, 2000) India to

Philippines (Huber, 2010); **JEJU:** Iho, Udo (Geomeollae), Jongdal-ri, Seongsan, Shinyang, Jungmun, Hwasoon, Yongmeori

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** (May not occur in Jeju) “*Sativa* is the same as the Japanese “*inaequivalvis*” (e.g. Okutani, 2000 pl. 424 fig. 39). *Sativa* has fewer ribs, is less inequivalve and has a very solid texture markedly distinct from true *inaequivalvis*” (Huber, 2010). However, Lutaenko (pers. comm.) believes that this species is not *A. sativa*. *Scapharca inaequivalvis* (Bruguiere, 1789) is a synonym.

### 38 *Anadara broughtonii* (Schrenck, 1867)

(Fig. 29)

**ORIGINAL DESCRIPTION:** Schrenck, L.I. 1867. Mollusken des Amur-Landes und des Nordjapanischen Meeres. Reisen und Forschung im Amur-Landes in den Jahren 1854–1856. Akademie der Wissenschaften zu St. Petersburg, 2. 578-580, pl. 24, figs. 1-3. (As *Arca broughtonii* Schrenck, 1867)

**TYPE LOCALITY:** Hakodate Bay; Nagasaki, Japan

**GENERAL DISTRIBUTION:** Japan and Eastern Russia to Vietnam; **JEJU:** Ojo-ri, Munseom, Bumseom, Supseom

**HABITAT:** In bays in sandy mud, at depths of 5-50 m

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Uncommon in Jeju Island; harvested commercially in mainland Korea.

**Genus:** *Tegillarca* Iredale, 1939

### 39 *Tegillarca granosa* (Linnaeus, 1758)

(Fig. 30)

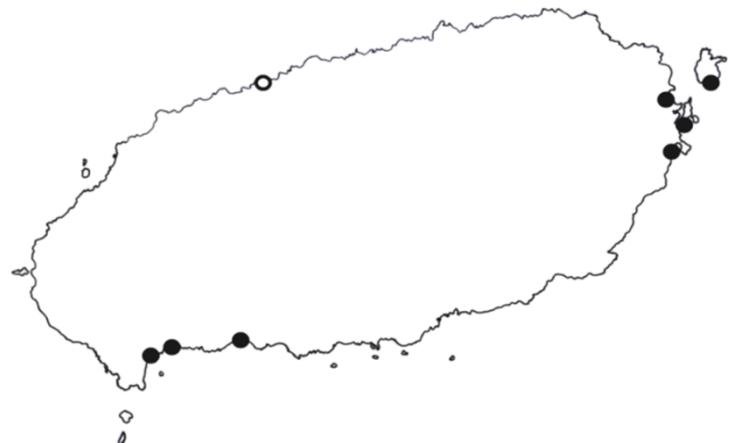

Fig. 28: Distribution of “*A. (S.) inaequivalvis*

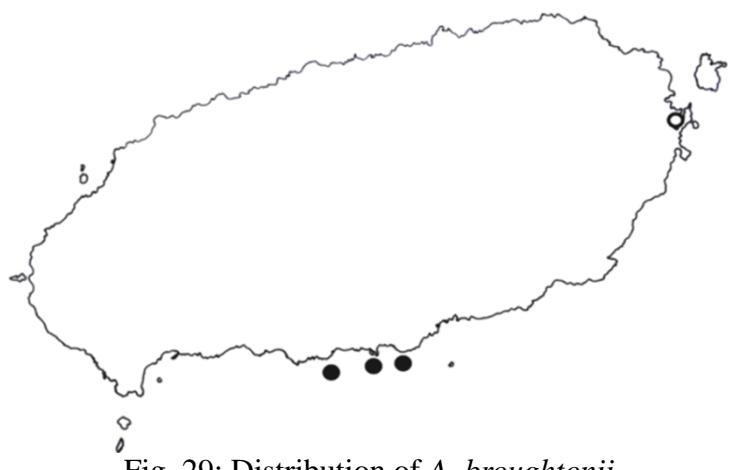

Fig. 29: Distribution of *A. broughtonii*

Fig. 30: Distribution of *T. granosa*

**ORIGINAL DESCRIPTION:** Linnaeus, C. 1758, *Systema Naturae per regna tria naturae, secundum Classes, Ordines, Genera, Species Editio decima, reformata* (10<sup>th</sup> Edition), 1. Stockholm: 694. (As *Arca granosa* Linnaeus, 1758) (Without illustration)

**TYPE LOCALITY:** Unknown

**HABITAT:** Bays and sheltered shores, estuarine-marine environment, in mangrove areas and brackish water, close to the surface of soft mud, from the intertidal zone to depth of 10m

**GENERAL DISTRIBUTION:** Southern Korea and Japan to Indo-Pacific; **JEJU:** Udo (Geomeollae), Seongsan, Shinyang, Bomok, Hamo

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** *T. granosa* is ovate with 17-21 nodulose ribs, a comparatively narrow, flat, chevroned ligament, and a break in the hinge line under the beaks; highly variable. A possible new species record for Jeju Island; most specimens appear subfossil.

**Family: GLYCYMERIDIDAE Dall, 1908**

**Genus: *Glycymeris* da Costa, 1778**

**40    *Glycymeris aspersa* (Adams & Reeve 1850)**

(Fig. 31)

**ORIGINAL DESCRIPTION:** Adams, A. and Reeve, L. 1850. *Mollusca [in] Adams A. (ed.) The Zoology of the Voyage of H.M.S. Samarang, under the command of Captain Sir Edward Belcher C. B., F. R. A. S., F. G. S., during the years 1843-1846.* London: Reeve, Benham & Reeve, Part III, p. 76, pl. XXII, fig. 8. (As *Pectunculus aspersa* Adams and Reeve, 1850)

**TYPE LOCALITY:** Honshu, Japan (Huber, 2010) (“Sulu Archipelago, Philippines – erroneous”) (Huber, 2010)

**HABITAT:** Shelly coarse sandy bottom from depth of 3-71 m.

**GENERAL DISTRIBUTION:** (Japan to East China Sea); **JEJU:** Iho, Jeju-shi, Handong,

Jongdal-ri, Seongsan, Seopjikoji, Shinyang, Wimi, Bomok, Beophwan, Gangjeong, Jungmun, Yerae, Daepyeong, Hwasoon, Yongmeori, Sagyei, Hamo, Biyangdo, Hyeopjae, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical???

**REMARKS:** The original type locality “Philippines, Sulu Arch.” is considered erroneous and here corrected to Japan, Honshu (Huber, 2010). *Glycymeris vestita* (Dunker, 1877) is a synonym.

**41 *Glycymeris albolineata* (Lischke 1872)**

(Fig. 32) (Plate 3: A-D)

**ORIGINAL DESCRIPTION:** Lischke, C.E., 1872. Diagnosen neuer Meeres-Conchylien von Japan . *Malakozoologische Blatter*, 19: 109. (As *Pectunculus albolineata* Lischke, 1872)  
(Without illustration)

**TYPE LOCALITY:** Tokyo Bay, Japan

**HABITAT:** Fine sand and sandy mud subtidal, at depths from 3 - 20 m

**GENERAL DISTRIBUTION:** Korea and Japan to Taiwan; **JEJU:** Iho, Udo (Hagosudong),  
Jongdal-ri, Seongsan Seopjikoji Shinyang Wimi Bomok, Jungmun, Hwasoon

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** Smaller members of this species may resemble *G. aspersa*. However, *G. albolineata* is subquadrate, as opposed to the subcircular shape of *G. vestita*, usually with shades of yellowish-brown with narrow, incised, white radial lines, and ornamented with fine punctations. Also, *G. aspersa* usually possesses more varied color patterns.

**42 *Glycymeris rotunda* (Dunker 1882)**

(Fig. 33)

**ORIGINAL DESCRIPTION:** Dunker, W. 1882. Index Molluscorum Maris Japonici. Cassel:

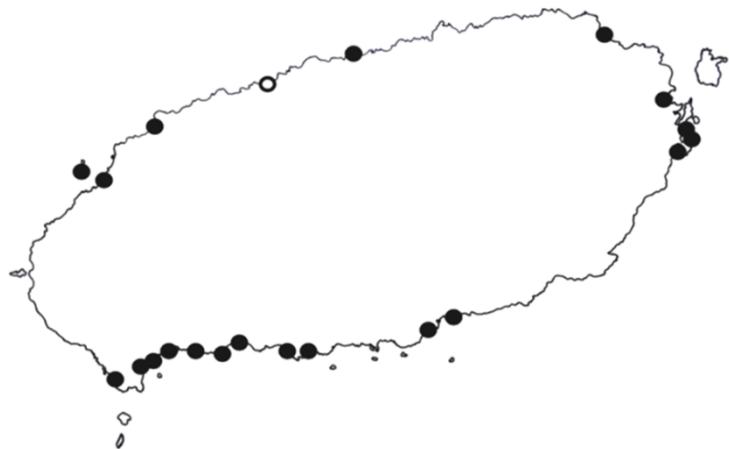

Fig. 31: Distribution of *G. aspersa*

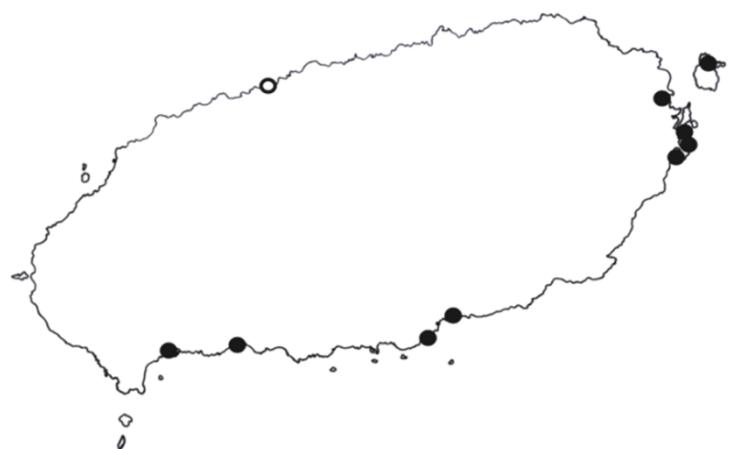

Fig. 32: Distribution of *G. albolineata*

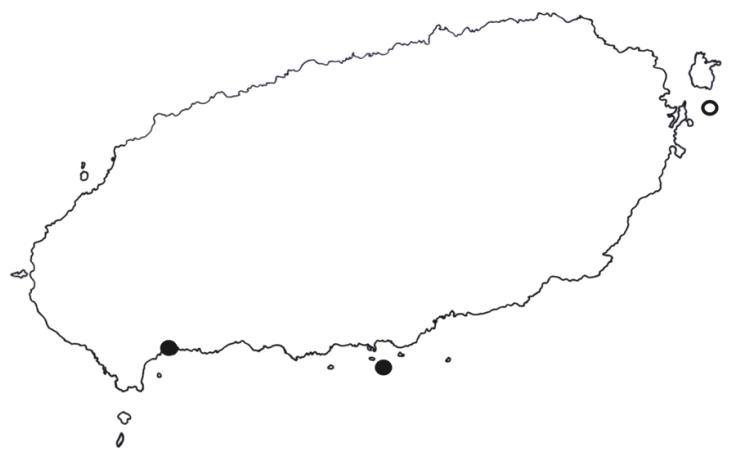

Fig. 33: Distribution of *G. rotunda*

Fischer, p. 236, pl. 16; figs, 9, 10. (As *Pectunculus rotundus* Dunker, 1882)

**TYPE LOCALITY:** Tokyo Bay, Japan

**HABITAT:** Fine sand and sandy mud, from depths of 20-300 m

**GENERAL DISTRIBUTION:** Korea and Japan to E. China Sea; **JEJU:** East of Songsan, South of Seogwipo, Hwasoon

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**Family:** NOETIIDAE Stewart, 1930

**Genus:** *Striarca* Conrad, 1862

**43 *Striarca symmetrica* (Reeve, 1844)**

(Fig. 34) (Plate 1: K-N)

**ORIGINAL DESCRIPTION:** Reeve, L. A. 1844. Descriptions of new species of *Arca*, chiefly collected by H. Cuming, Esq. in the Philippine Islands. *Proceedings of the Zoological Society of London*, 12: 127, 128. (As *Arca symmetrica* Reeve, 1844) (Without illustration)

**TYPE LOCALITY:** Manila Bay, Philippines

**HABITAT:** Attached to rocks from the intertidal zone to depth of 30m

**GENERAL DISTRIBUTION:** Korea and Japan to tropical West Pacific; Burma; **JEJU:** Jeju-shi, Hamdeok, Gimnyeong, Wolpyeong, Sehma, Haengwon, Handong, Sehma, Udo (Hagosudong), Udo (Sanhosa), Jongdal-ri, Seongsan, Shinyang, Pyoseon, Bomok, Seogundo, Gangjeong, Jungmun, Yerae, Daepyeong, Hwasoon, Sagyei, Hamo, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** *Arcopsis symmetrica* (Reeve, 1844) is a synonym.

**Genus:** *Didimacar* Iredale, 1939

**44 *Didimacar tenebrica* (L. A. Reeve 1844)**

(Fig. 35)

**ORIGINAL DESCRIPTION:** Reeve, L. A. 1844. Descriptions of new species of *Arca*, chiefly collected by H. Cuming, Esq. in the Philippine Islands. *Proceedings of the Zoological Society of London*, 12, 126. (As *Arca tenebricum* Reeve, 1844) (Without illustration)

**TYPE LOCALITY:** Samar Island, Eastern Philippines

**HABITAT:** Attached to the underside of large rocks, on or under stones or dead corals from the intertidal zone to depth of 31m;

**GENERAL DISTRIBUTION:** Korea and Japan to Indo-West Pacific; **JEJU:** Udo (Hagosudong), Udo (Sanhosa), Seongsan, Hamo, Biyangdo

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** *D. tenebrica* is extremely variable in shape. The more elongate Indian Ocean forms seem at first glance distinct from the very humped, inflated Chinese and Japanese forms, but Australian specimens (= *repenta*) are just in between and intermediate well (Huber, 2010). *Didimacar tenebricum* (Reeve, 1844) is a synonym.

**Family: PARALLELODONTIDAE Dall, 1898**

**Genus: *Porterius* B. L. Clark, 1925**

**45    *Porterius dalli* (E. A. Smith, 1885)**

(Fig. 36) (Plate 4: I, J)

**ORIGINAL DESCRIPTION:** Smith, E.A., (1885) Report on the Lamellibranchiata collected by HMS Challenger, 1873-76, Challenger Reports (Zoology) Vol. 13: 269, pl. 17. figs. 10-10b. (As *Arca (Macrodon) dalli* E. A. Smith, 1885)

**TYPE LOCALITY:** Off Kobe, Japan

**HABITAT:** Byssally attached to rocks and stones on gravelly substrate, from depth of 20-300 m

Fig. 34: Distribution of *S. symmetrica*

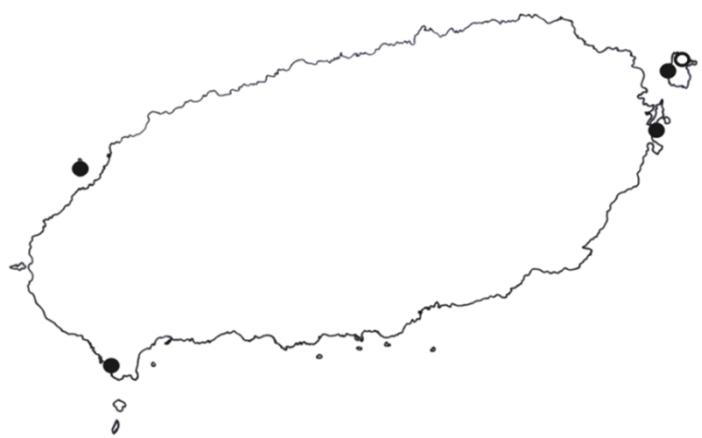

Fig. 35: Distribution of *D. tenebrica*

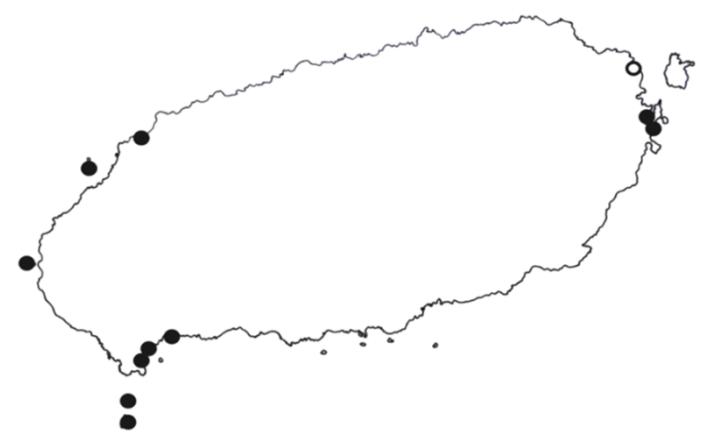

Fig. 36: Distribution of *P. dalli*

**GENERAL DISTRIBUTION:** Yellow Sea to Bering Sea; **JEJU:** Hado, Ojo-ri, Seongsan, Hwasoon, Sagyei, Songaksan, Gapado, Marado, Chagwi-do, Biyangdo, Gwideok

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** Resembles *Barbatia trapezina* but can be identified by its hinge teeth which are arranged radially anteriorly and horizontal posteriorly.

### **Superfamily: Limopoidea Dall, 1895**

**Family: LIMOPSIDAE Dall, 1895**

**Genus: *Limopsis* Sassi, 1827**

#### **46 *Limopsis (Oblimopa) japonica* A. Adams, 1863**

(Fig. 37) (Plate 4: (A-H)

**ORIGINAL DESCRIPTION:** Adams, A. 1863. Descriptions of Some New Species of Limopsis from the Cumingian Collection. *Proceedings of the Zoological Society of London*. 1862: 229. (As *Limopsis japonica* A. Adams, 1863) (Without illustration)

**TYPE LOCALITY:** Kuroshima, Kyushu, Japan

**HABITAT:** Muddy sand from depth of 26 – 290 m.

**GENERAL DISTRIBUTION:** Korea and Japan to East China Sea; **JEJU:** Wolpyeong, Songsan, Seopjikoji, Seogwipo, Jungmun, Yerae, Hwasoon, Yongmeori, Sagyei, Hamo

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** A common species on the south coast of Jejudo. *Oblimopa japonica* (A. Adams, 1863) is a synonym.

#### **47 *Limopsis (Nipponolimopsis) azumana* Yokoyama, 1910**

(Fig. 37)

**ORIGINAL DESCRIPTION:** Yokoyama, M. 1910. On species of *Limopsis* found in the Neogene of Koshiba. Journal of the Geological Society of Japan. 17:3, 4, pl. 9, figs. 16-18.  
(As : *Limopsis azumana* M. Yokoyama, 1910)

**TYPE LOCALITY:** Koshiba, Kanagawa Prefecture, Japan

**HABITAT:** In sand; at depths of 100-250 m

**GENERAL DISTRIBUTION:** Korea; E. Japan; JEJU: Seongsan (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** Shell large for genus. *Nipponolimopsis azumana* (Yokoyama, 1910) is a synonym.

### **Order: PTERIIDAE Newell, 1965**

#### **Superfamily: Pterioidea Gray, 1847**

**Family: PTERIIDAE Gray, 1847**

**Genus: *Pteria* Scopoli, 1777**

#### **48 *Pteria heteroptera* (Lamarck 1819)**

**(Fig. 38)**

**ORIGINAL DESCRIPTION:** Lamarck, J. P. B. A de Monet de 1819. Histoire naturelle des animaux sans vertèbres, présentant les caractères généraux et particuliers de ces animaux, leur distribution, leurs classes, leurs familles, leurs genres, et la citation des principales espèces qui s'y rapportent; précédée d'une introduction offrant la détermination des caractères essentiels de l'animal, sa distinction du végétal et des autres corps naturels, enfin, l'exposition des principes fondamentaux de la zoologie. Tome sixième. Ire. partie. Paris. 148. (As *Avicula heteroptera* Lamarck 1819) (Without illustration)

**TYPE LOCALITY:** Java

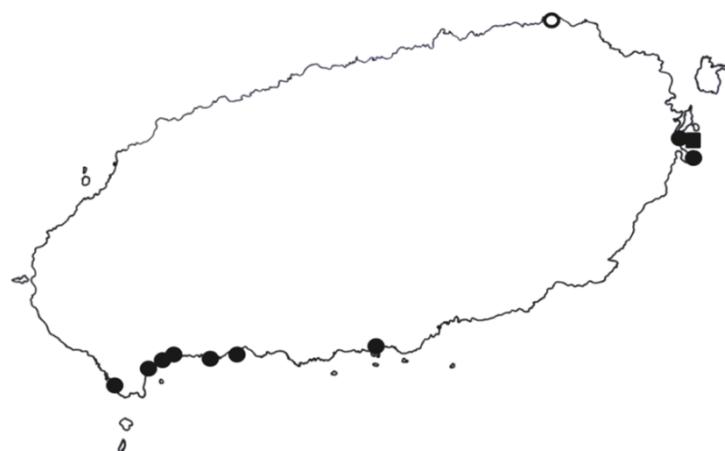

Fig. 37: Distribution of *L. (O.) japonica* (●) and *L. (N.) azumana* (■)

Fig. 38: Distribution of *P. heteroptera* (●), *P. gregata* (■), and *P. maura* (▲)

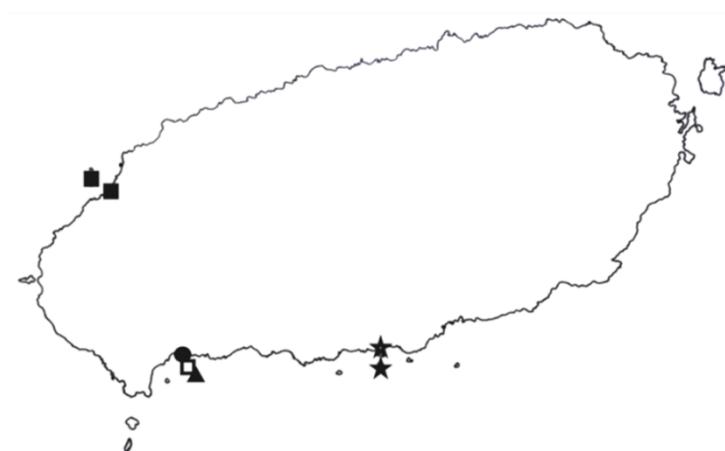

Fig. 39: Distribution of *P. albina* (●), *P. imbricata* (■), *P. nigra* (▲), and *Electroma physoides* (★)

**HABITAT:** Byssally attached to gorgonians *Sphaerococcus coronopifolius*, on mud, sand, and fine gravel, also coral substrate from depth of 10-350 m

**GENERAL:** Southern Korea and Japan to Indo-West Pacific; northern New Zealand; **JEJU:** Munseom

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** This reddish, broad form with size in excess of 100 mm was described earlier than *Avicula brevialata* Dunker, 1872. Lamarck gave no type locality for *heteroptera*; but the Geneva specimens are correctly labelled “Oc. Indien”. Consequently *P. heteroptera* is here applied for the brownish-red, duller, more quadrate forms, often with strongly twisted wings (Huber, 2010). *Pteria brevialata* (Dunker, 1872) is a synonym.

#### 49 *Pteria gregata* (Reeve 1857)

(Fig. 38)

**ORIGINAL DESCRIPTION:** Reeve, L. A. 1857: Monograph of the genus *Avicula*. Conchologia Iconica; or, illustrations of the shells of molluscous animals, vol. 10. London, L. A. Reeve. 17 pl. with captions. [June, 1857], pl. 16, fig. 63. (As *Avicula gregata* L. A. Reeve 1857)

**TYPE LOCALITY:** Tutuilla (Tutuila), Samoa

**HABITAT:** Reef slopes, byssally attached to gorgonians, from depth of 2-144 m

**GENERAL DISTRIBUTION:** Southern Korea and Japan to Indo-West Pacific; **JEJU:** Seogwipo, Munseom (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** As *loveni* occurs commonly and is widely distributed, it seemed highly unlikely that Reeve, disposing of Cuming's rich Indo-Pacific collection, one of the largest ever assembled, should not have described this widespread species. Here the earlier *A.*

*gregata* is selected to represent this species. *P. loveni* (Dunker, 1872) is a junior synonym (Huber, 2010).

**50 *Pteria maura* (Reeve 1857)**

(Fig. 38)

**ORIGINAL DESCRIPTION:** Reeve, L. A. 1857: Monograph of the genus *Avicula*. Conchologia Iconica; or, illustrations of the shells of molluscous animals, vol. 10. London, L. A. Reeve. 17 pl. with captions. [June, 1857], pl. 17, fig. 72. (As *Avicula maura* L. A. Reeve 1857)

**TYPE LOCALITY:** Sydney

**HABITAT:** Byssally attached to alcyonarians *Dendronephytyna* sp., gorgonians, or shell debris from depth of 10-180 m

**GENERAL DISTRIBUTION:** Southern Korea and Japan to Indo-West Pacific; **JEJU:** Munseom, "All around" (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** From shape, size, habitat, and from the material analysed throughout the Indo-Pacific, there is no doubt that *maura* is the earlier name for Dunker's species. As such, *Pteria maura* (Reeve, 1857) is the valid earlier, not preoccupied name, and *Pteria coturnix* (Dunker, 1879) is a synonym (Huber, 2010).

**Genus: *Pinctada* Röding, 1798**

**51 *Pinctada albina* (Lamarck, 1819)**

(Fig. 39)

**ORIGINAL DESCRIPTION:** Lamarck, J. P. B. A de Monet de 1819. Histoire naturelle des animaux sans vertèbres, présentant les caractères généraux et particuliers de ces animaux,

leur distribution, leurs classes, leurs familles, leurs genres, et la citation des principales espèces qui s'y rapportent; précédée d'une introduction offrant la détermination des caractères essentiels de l'animal, sa distinction du végétal et des autres corps naturels, enfin, l'exposition des principes fondamentaux de la zoologie. Tome sixième. Ire. partie. Paris. 152. (As *Meleagrina albina* Lamarck, 1819) (Without illustration)

**TYPE LOCALITY:** Tasmania (error? – Huber, 2010)

**HABITAT:** Sand, gravel, or rocky bottoms, also among eelgrass, from the intertidal zone to depth of 30 m

**GENERAL DISTRIBUTION:** S. Japan to Tropical W. Pacific (Western Australia only) (Huber, 2010); **JEJU:** Hwasoon (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Huber (2010) regards this species as restricted to Western Australia only. “This is a large species and grows to at least 130 mm. As such the original locality, Tasmania, is erroneous and *albina* appears distributed along the Western Australian coast only.” However, Temkin (2010) states, with reference to his phylogenetic analysis: “This study also suggested that *Pinctada albina* and *P. nigra*, generally distinguished by shell color (as their names imply), represent two colormorphs of the same species. This finding was consistent with other molecular studies that invariably resolved these species (represented by single exemplars) as sister taxa.” Not cited by Huber who may not have been aware of this study. Thus, these taxa may be conspecific and, if so, then “*albina*”, as the oldest name, must take priority, with a much wider distribution.

## 52 *Pinctada imbricata* Roding, 1798

(Fig. 39)

**ORIGINAL DESCRIPTION:** Röding, P. F. (1798) *Museum Boltenianum sive catalogus*

*cimeliorum e tribus regnis naturae quae olim collegerat Joa. Fried Bolten, M.D.p.d. Pars Secunda continens conchylia sive testacea univalvia, bivalvia & multivalvia. Johan. Christi. Trappii., Hamburgi. 167. (As *Pinctada imbricata* Roding, 1798) (Without illustration)*

**TYPE LOCALITY:** India and West Indies (Huber, 2010)

**HABITAT:** Byssally attached to rocks or corals, occasionally estuarine attached to mangrove roots; in muddy areas attached to seagrass or shells, from the intertidal zone to depth of 60 m

**GENERAL DISTRIBUTION:** Japan to Indo-Pacific; Hawaii; Caribbean; Mediterranean;

**JEJU:** Hwasoon, Biyangdo, Hyeopjae, "All around" (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Huber (2010) states that the original listed specimen came from the West Indies, whereas the depicted specimen came from Tranquebar, India. Thus, the original type locality of Röding can be understood as India **and** West Indies. This makes *Avicula fucata* Gould, 1850 (Fiji), *Avicula martensi* Dunker, 1872 (Japan) and about a dozen Dunkerian "species" synonymous. Therefore, *Pinctada fucata* (Gould, 1850) is also a synonym.

### 53 *Pinctada nigra* (Gould, 1850)

(Fig. 39)

**ORIGINAL DESCRIPTION:** Gould, A. A. 1850. [Shells from the United States Exploring Expedition]. Proceedings of the Boston Society of Natural History 3(19): 309. (As *Avicula nigra* Gould, 1850) (Without illustration: see Atlas (1856) pl. 38 (40), figs. 554, 544 b)

**TYPE LOCALITY:** Singapore

**HABITAT:** Byssally attached to rocks, among stones, corals or gorgonians, also on wrecks, from the intertidal zone to depth of 35 m

**GENERAL DISTRIBUTION:** Southern Korea and southern Japan to Indo-Pacific; **JEJU:** Hwasoon (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** See comments on *P. albina*.

**Genus: *Electroma* Stoliczka, 1871**

**54 *Electroma physoides* (Lamarck 1819)**

(Fig. 39)

**ORIGINAL DESCRIPTION:** Lamarck, J. P. B. A de Monet de 1819. Histoire naturelle des animaux sans vertèbres, présentant les caractères généraux et particuliers de ces animaux, leur distribution, leurs classes, leurs familles, leurs genres, et la citation des principales espèces qui s'y rapportent; précédée d'une introduction offrant la détermination des caractères essentiels de l'animal, sa distinction du végétal et des autres corps naturels, enfin, l'exposition des principes fondamentaux de la zoologie. Tome sixième. Ire. partie. Paris. 149. (As *Avicula physoides* Lamarck, 1819) (Without illustration)

**TYPE LOCALITY:** Northern Australia

**HABITAT:** Coral reefs, rocky and gravel substrate, byssally attached to whip corals *Lytocarpus phoeniceus*, *Plumularia badia*, and *Ophiodes dichotomus*, at depth of 3-150m

**GENERAL DISTRIBUTION:** Southern Korea and Japan to Indo-W. Pacific; **JEJU:** Seogwipo, Munseom (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** *Pterelectroma zebra* (Reeve, 1857) and *Electroma zebra* (Reeve, 1857) are synonyms.

**Family: ISOGNOMONIDAE Woodring, 1925**

**Genus: *Isogonomon* Lightfoot, 1786**

**55 *Isogonomon (Isognomon) ephippium* (Linnaeus, 1758)**

(Fig. 40)

**ORIGINAL DESCRIPTION:** Linnæus, C. 1758. *Systema naturæ per regna tria naturæ, secundum classes, ordines, genera, species, cum characteribus, differentiis, synonymis, locis.* Tomus I. Editio decima, reformata. Holmiæ. (Salvius).700. (As *Ostrea ephippium* Linnaeus, 1758) (Without illustration)

**TYPE LOCALITY:** “M. Asiatico” (Indo-Pacific) (Linnaeus)

**HABITAT:** Byssally attached to rocks or shells from the intertidal zone to depth of 10 m

**GENERAL DISTRIBUTION:** Southern Korea and southern. Japan to Indo-W. Pacific;

**JEJU:** Seongsan, Bomok, Seogwipo, Munseom, Seogundo, Jungmun, Yerae, Hwasoon, Yongmeori, Sagyei, Songaksan, Keumneung

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Easily identified by comb-like dentition and coarse, blackish byssus.

## Superfamily: Pinoidea Leach, 1819

**Family:** PINNIDAE Leach, 1819

**Genus:** *Pinna* Linnaeus, 1758

### 56 *Pinna (Quantulopinna) muricata* Linnaeus, 1758

(Fig. 41)

**ORIGINAL DESCRIPTION:** *Systema naturæ per regna tria naturæ, secundum classes, ordines, genera, species, cum characteribus, differentiis, synonymis, locis.* Tomus I. Editio decima, reformata. Holmiæ. (Salvius). 707. (As *Pinna muricata* Linnaeus, 1758) (Without illustration)

**TYPE LOCALITY:** Hawaii/India (“Mediterranean” (Linnaeus –error))

**HABITAT:** Sandy mud, also among gravel or rocks and on *Thalassia* sandflats, from the intertidal zone to depth of 60 m

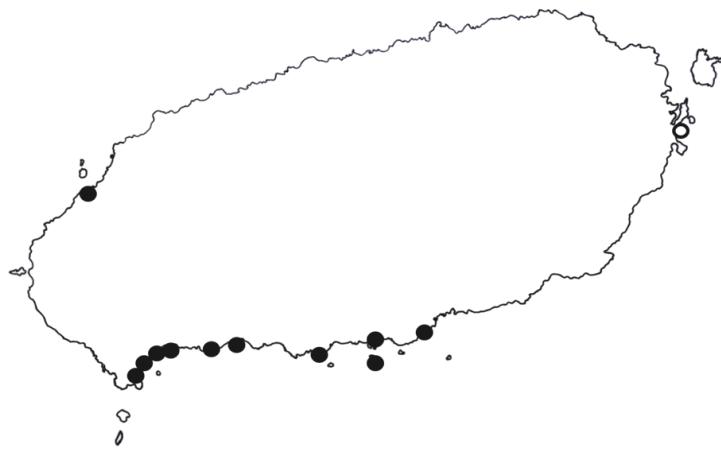

Fig. 40: Distribution of *I. ephippium*

Fig. 41: Distribution of *P. (Q.) muricata* (●) and *P. saccata* (■)

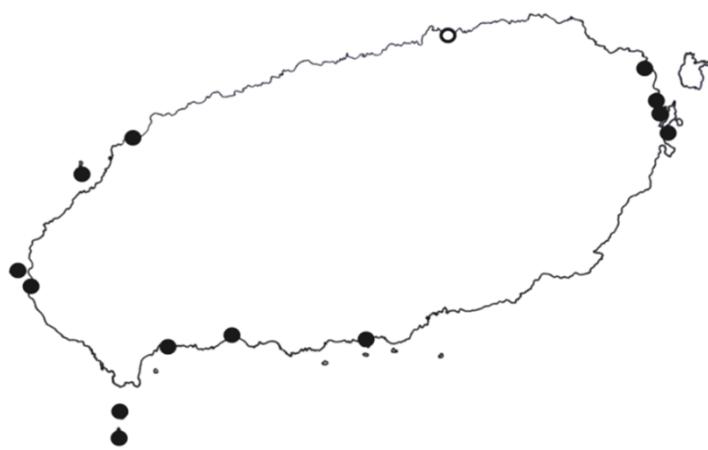

Fig. 42: Distribution of *O. denselammelosa*

**GENERAL DISTRIBUTION:** Southern Korea and southern Japan to Indo-Pacific; Hawaii;

South Africa; **JEJU:** Udo (Sanhosa), Yerae, Hwasoon

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** No marked differences were detected between East African, Indian, Australian and Hawaiian material. *P. muricata* is perceived as very widely distributed and one of the most common Indo-Pacific pinnids (Huber, 2010).

### **57 *Pinna saccata* Linnaeus, 1758**

(Fig. 41)

**ORIGINAL DESCRIPTION:** *Systema naturæ per regna tria naturæ, secundum classes, ordines, genera, species, cum characteribus, differentiis, synonymis, locis.* Tomus I. Editio decima, reformata. Holmiæ. (Salvius). 707. (As *Pinna saccata* Linnaeus, 1758) (Without illustration)

**HABITAT:** Byssally attached to gorgonians, *Sphaerococcus coronopifolius*, on mud, sand and fine gravel, also in coralline algae, from depth of 10–350 m

**GENERAL DISTRIBUTION:** Japan to Indo-Pacific; Hawaii; South Africa; Isla del Coco, Costa Rica; **JEJU:** Jungmun, "All around" (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Used for food in China. *Streptopinna saccata* is the only species currently included in the genus *Streptopinna*, and is Panpacific, being recorded from the Red Sea to offshore Panamic islands. *Streptopinna saccata* (Linnaeus, 1758) is a synonym.

## **Order: OSTREIDA Féruſſac, 1822**

### **Superfamily: Ostreoidea Rafinesque, 1815**

**Family: OSTREIDAE Rafinesque, 1815**

**Subfamily: Ostreinae Rafinesque, 1815**

**Genus: *Ostrea* Linnaeus, 1758**

**58 *Ostrea denselammelosa* Lischke, 1869**

(Fig. 42)

**ORIGINAL DESCRIPTION:** Lischke, C. E. 1869. Diagnosen neuer Meeres-Konchylien aus Japan. *Malakozoologische Blatter* 16: 109. (As *Ostrea denselammelosa* Lischke, 1869) (Without illustration; Figured in Lischke (1869b) (Pl. 13, figs a-b; pl. 14, fig. 1)

**TYPE LOCALITY:** Nagasaki, Kyushu, Japan

**HABITAT:** Left valve cemented to rocks and pebbles, on sand and gravel bottoms from the intertidal zone to depth of 35 m

**GENERAL DISTRIBUTION:** East Sea to Indonesia; **JEJU:** Hamdeok, Hado, Jongdal-ri, Ojo-ri, Seongsan, Seogwipo, Jungmun, Hwasoon, Gapado, Marado, Gosan, Chagwido, Biyangdo, Gwideok

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**Subfamily: Lophinae Vyalov, 1936**

**Genus: *Dendostrea* Swainson, 1835**

**59 *Dendostrea folium* (Linnaeus 1758)**

(Fig. 43)

**ORIGINAL DESCRIPTION:** Linnaeus, C. 1758. *Systema naturæ per regna tria naturæ , secundum classes, ordines, genera, species, cum characteribus, differentiis, synonymis, locis.* Tomus I. Editio decima, reformata. Holmiæ . (Salvius) p. 699. (As *Mytilus folium* Linnaeus, 1758) (Without illustration)

**TYPE LOCALITY:** Pacific Ocean (“Jamaica” (error - Linnaeus)

**HABITAT:** Cemented by finger-like processes to stems of gorgonians, sea fans, rocks or corals, from depths of 5-50 m

**GENERAL DISTRIBUTION:** Southern Korea and southeastern Japan to Indo-Pacific; eastern Mediterranean; **JEJU:** Seongsan (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Type species of *Dendostrea*.

## 60 *Dendostrea sandvicensis* (G. B. Sowerby II 1871)

(Fig. 43)

**ORIGINAL DESCRIPTION:** Sowerby, G.B. 1871. Monograph of the genus *Ostraea*, in: G. B. Sowerby II, ed., *Conchologia Iconica; or, Illustrations of the Shells of Molluscous Animals* Vol. 18: p. 27, figs. 66 (a-b) (As *Ostraea sandvicensis* G.B. Sowerby II, 1871)

**TYPE LOCALITY:** “Sandwich Islands” (Hawaii)

**HABITAT:** Attached to other shells, on pilings, rocky substrate, or coral rubble, from the intertidal zone to depth of 40 m

**GENERAL DISTRIBUTION:** Japan to Indo-W. Pacific, eastern Mediterranean; Hawaii, Mexico (Gulf of California); **JEJU:** Jongdal-ri, Munseom, Hwasoon, Yongmeori

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** “Several authors have studied *sandvicensis*, and now regard *O. crenulifera* Sowerby, 1878 as a synonym of this species” (Huber, 2010). *Dendostrea crenulifera* (Sowerby, 1878) is a synonym.

**Subfamily: Crassostreinae Scarlato & Starobogatov, 1979**

**Genus: *Crassostrea* Sacco, 1897**

## 61 *Crassostrea gigas* (Thunberg, 1793)

(Fig. 44)

**ORIGINAL DESCRIPTION:** Thunberg C. P. (1793). Tekning och Beskrifning på en stor Ostronsort ifrån Japan. *Kongliga Vetenskaps Academiens Nya Handlingar*, 14(4-6): 140-142, pl. 6, figs 1-3. (As *Ostrea gigas* Thunberg, 1793)

**TYPE LOCALITY:** Japan

**HABITAT:**, Sheltered, often brackish, bays with low salinity; on rocks, often in mud, from intertidal zone to depth of 30 m

**GENERAL DISTRIBUTION:** Eastern Asia; **JEJU:** Hamdeok. Wolpyeong. Jongdal-ri, Seopjikoji. Shinyang. Wimi. Bomok, Beophwan, Jungmun. Yerae. Daepyeong, Hwasoon. Yongmeori. Sagyei. Hamo, Hyeopjae. Gwideok. Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-lowboreal

**REMARKS:** *Crassostrea* are quite unanimously recognized as nonincubatory, without chomata. However, *Crassostrea* is not affixed with clasper spines to wood, other shells or stones (Huber, 2010)

## 62 *Crassostrea nippona* (H. Seki 1934)

(Fig. 44)

**ORIGINAL DESCRIPTION:** Seki, H., 1934: Description of *Ostrea nippona* n. sp. with remarks on *Ostrea circumpicta* Pilsbry. Venus, Kyoto, 4 (5), 276, text figs. 1-5. (As *Ostrea nippona* Seki, 1934.

**TYPE LOCALITY:** ???

**HABITAT:** Marine environment; left valve cemented to rocks, from the intertidal zone to depth of 20 m

**GENERAL DISTRIBUTION:** East Sea to Yellow Sea; **JEJU:** Jungmun (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

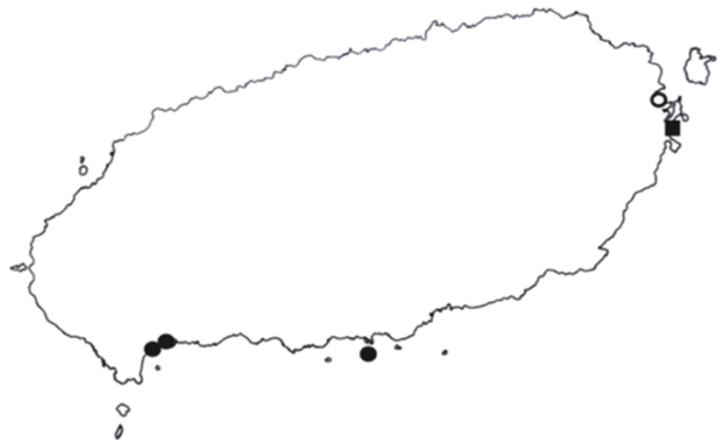

Fig. 43: Distribution of *D. folium* (■) and *D. sandvicensis* (●)

Fig. 44: Distribution of *C. gigas* (●) and *C. nippona* (■)

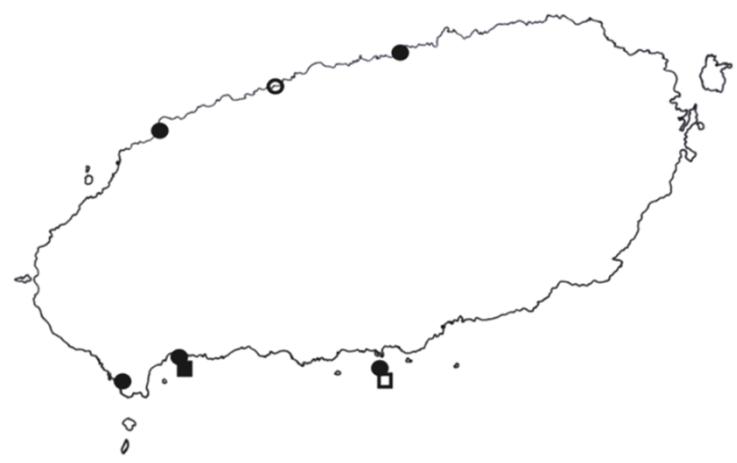

Fig. 45: Distribution of *S. kegaki* (●) and *S. echinata* (■)

**REMARKS:** *Crassostrea nipponica* (Seki, 1934) is a misspelling.

**Genus: *Saccostrea* Dollfus & Dautzenberg, 1920**

**63 *Saccostrea echinata* (Quoy & Gaimard, 1835)**

(Fig. 45)

**ORIGINAL DESCRIPTION:** Quoy, J. R.'e. and Gaimard, J. P. 1835. Mollusca. Voyage de decouvertes de l'Astrolabe, execute par ordre du rois, pendant les annees 1826-29, sous le commandement de M. J. Dumont d'Urville. *Zoologie* 3: 455, pl. 76, figs. 13-14. (As *Ostrea echinata* Quoy & Gaimard, 1835)

**TYPE LOCALITY:** Amboina, (Amboin, Indonesia)

**HABITAT:**; Marine-estuarine; attached to rocks, mangrove roots, and trees, in the intertidal zone

**GENERAL DISTRIBUTION:** Korea and Southern Japan to Indo-West Pacific; **JEJU:** Munseom, Hwasoon (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** *Crassostrea nigromarginata* (Sowerby, 1871) is a synonym.

**64 *Saccostrea kegaki* Torigoe and Inaba, 1981**

(Fig. 45)

**ORIGINAL DESCRIPTION:** Torigoe, K. and A. Inaba. 1981. On the scientific name of Japanese spiny oyster "kegaki". *Venus* 40: 126-134. Pl. 1, figs. 1-7; Pl. 2, figs. 1-9) (As *Saccostrea kegaki* Torigoe and Inaba, 1981)

**TYPE LOCALITY:** Seto Inland Sea, Japan

**HABITAT:** Attached to rocks and other hard substrate in the intertidal zone

**GENERAL DISTRIBUTION:** East Sea to East China Sea; **JEJU:** Iho, Samyang, Munseom,

Hwasoon, Hamo, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** The usually strongly spinose, comparatively small, and rather fragile *S. kegaki*, though morphologically quite close to *echinata*, has been genetically isolated by Lam & Morton (2006). Compared to *echinata* which also occurs in mangrove areas or mud flats, *kegaki* has only been found intertidally attached to stones on rocky shores (Huber, 2010). Okutani (2000) states that juvenile individuals of *S. echinata* may resemble *S. kegaki*; however, the shell of *S. echinata* becomes much larger and elongate-oval, as opposed to the generally subcircular shape of *S. kegaki*. See Torigoe and Inaba (1981) for a detailed comparison.

**Genus: *Striostrea* Vialov, 1936**

**65 *Striostrea circumpicta* (Pilsbry, 1904)**

(Fig. 46)

**ORIGINAL DESCRIPTION:** Pilsbry, H. A. 1904. New Japanese Marine Mollusca: Pelecypoda. Proceedings of the Academy of Natural Sciences Philadelphia 56: 559, pl. 40, fig. 12-13. (As *Ostrea circumpicta* Pilsbry, 1904).

**TYPE LOCALITY:** Hirado, Nagasaki Prefecture, Kyushu, Japan

**HABITAT:** Exposed shores; attached to non-calcareous rocks, forming dense banks, from intertidal zone to depth of 7 m

**GENERAL DISTRIBUTION:** Korea and Japan to Taiwan; **JEJU:** Iho, Jeju-shi, Jongdal-ri, Seongsan, Supseom, Seogwipo, Munseom, Bumseom, Jungmun, Daepyeong, Hwasoon, Sagyei, Keumneung, Biyangdo

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** Very characteristic of *Striostrea* are divaricate riblets on the lamellae, but these

are usually worn off; then a regular commarginal sculpture is visible. According to Huber (2010), *S. circumpicta* is heavy and solid with an iridescent, often whitish gray-green, interior and reddish margins.

**Family: GRYPHAEIDAE Vialov, 1936**

**Subfamily: Pycnodonteinae Stenzel, 1959**

**Genus: *Hyotissa* Stenzel, 1971**

**66 *Hyotissa hyotis* (Linnaeus, 1758)**

(Fig. 47)

**ORIGINAL DESCRIPTION:** Linnæus, C. 1758. *Systema naturæ per regna tria naturæ, secundum classes, ordines, genera, species, cum characteribus, differentiis, synonymis, locis. Tomus I. Editio decima, reformata. Holmiæ. (Salvius). p. 704.* (As *Mytilus hyotis* Linnaeus, 1758) (Without illustration)

**TYPE LOCALITY:** Unknown

**HABITAT:** Coral and rocky reefs, often attached to rocks and corals, occasionally free living, at depths from 2-30 m

**GENERAL DISTRIBUTION:** Southern Korea and Southern Japan to Indo-W. Pacific; Florida (introduced); **JEJU:** Jeju-shi, Seongsan, Seogwipo, Munseom, Bumseom, Yerae, Hwasoon, Keumneung

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** “Easiest for distinction in *Hyotissa* are the muscle scars in adults which are yellowish-brown and markedly elevated in *hyotis*” (Huber, 2010).

**Genus: *Parahyotissa* Harry, 1985**

**67 *Parahyotissa inermis* (Sowerby II, 1871)**

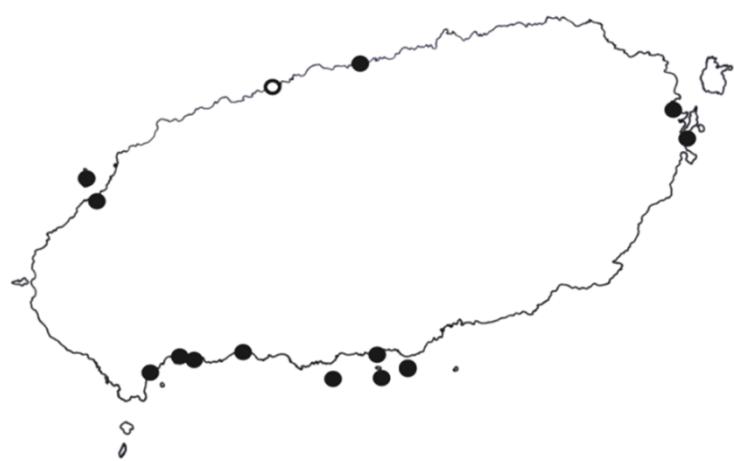

Fig. 46: Distribution of *S. circumpicta*

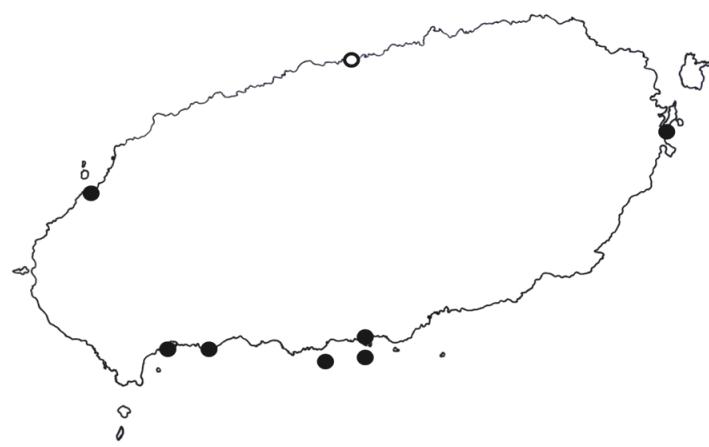

Fig. 47: Distribution of *H. hyotis*

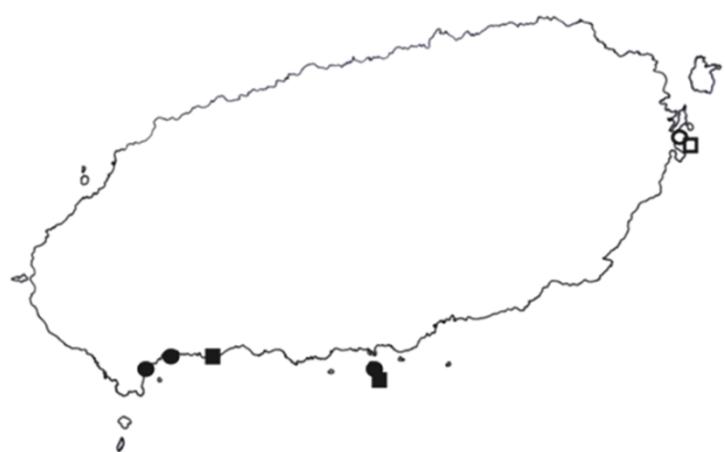

Fig. 48: Distribution of *P. inermis* (●) and *P. (Plioxytissa)* sp. (■)

(Fig. 48)

**ORIGINAL DESCRIPTION:** Sowerby, G.B. 1871. Monograph of the genus *Ostraea*.

Conchologia Iconica Vol. 18: pl. 28, fig. 70. (As *Ostrea inermis* G.B. Sowerby II, 1871)

**TYPE LOCALITY:** No original type locality; Hota, Chiba Pref., Honshu, Japan (selected by Huber, 2010)

**HABITAT:** Cemented by left valve to rocks and corals, rocky bottoms, from the intertidal zone to depth of 30 m

**GENERAL DISTRIBUTION:** Southern Korea and Japan to W. Pacific; Hawaii (introduced); **JEJU:** Seongsan, Munseom, Hwasoon, Sagyei

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** *Ostrea imbricata* Lamarck, 1819 is preoccupied by *O. imbricata* Gmelin, 1791 (= *Caribachlamys pellucens*). *Ostrea inermis* Sowerby II, 1871, described from an unknown locality, is accepted by modern authors as a synonym and the next available valid name for this widely distributed *Parahyotissa*. The rough purple-brown forms depicted by Sowerby II (1871) are typically found in Japan. Thus, Hota, Honshu, Chiba Prefecture, is designated as type locality for *Ostrea inermis*. *P. inermis* is the most commonly found gryphaeid in the Indo-Pacific, and extremely variable in colors (white, yellow, brown, grey, golden, silvery, red, purple and in all shades in between). It is also extremely variable in shape, usually rather flat and ovate, but some small specimens even approach *Dendostrea sandvicensis*. It is always quite easily differentiated by its spongy shell structure, usually best seen on the inside borders in fresh specimens, and the round, whitish muscle scar (Huber, 2010).

## 68 *Parahyotissa (Pliohyotissa) sp.*

(Fig. 48)

**HABITAT:** At depth of 3 m

**GENERAL DISTRIBUTION:** Korea and Japan to North Borneo (Sabah); **JEJU:** Seongsan, Munseom Yerae (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** A *Parahyotissa* (*Pliohyotissa*) species present in Borneo, S Chi Sea, to Sagami Bay Honshu, Japan, is often named *chemnitzii* auctt. This species has a more elongated muscle scar than *inermis*. This Indo-Pacific species is understood as undescribed. At present, as the very limited Asian material prevents progress, this species is therefore listed as *P. (Pliohyotissa) sp.*, and *P. chemnitzii* auctt. non Hanley, 1846 is a synonym (Huber, 2010).

## Order: PECTINIDA Gray, 1854

### Superfamily: Anomioidea Rafinesque, 1815

**Family:** ANOMIIDAE Rafinesque, 1815

**Genus:** *Isomonia* Dautzenberg & Fischer, 1897

#### 69 *Isomonia umbonata* (A. A. Gould 1861)

(Fig. 49)

**ORIGINAL DESCRIPTION:** Gould, A.A. 1861. *Descriptions of shells collected by the North Pacific Exploring Expedition (continued)*. Proceedings of the Boston Society of Natural History 8: 39, 40. (As *Placun anomia umbonata* Gould 1861) (Without illustration)

**TYPE LOCALITY:** Kagoshima Bay, Japan

**GENERAL DISTRIBUTION:** Korea and Japan to East China Sea; **JEJU:** Udo (Hagosudong), Seongsan, Bomok, Seogwipo, Munseom, Seogundo, Jungmun, Yongmeori, Sagyei, Keumneung, Biyangdo, Hyeopjae, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** *Monia umbonata* (Gould, 1861) is a synonym.

**Superfamily: Dimyoidea P. Fischer, 1886**

**Family: DIMYIDAE P. Fischer, 1886**

**Genus: *Dimya* Rouault, 1850**

**70 *Dimya japonica* Habe, 1971**

(Fig. 49)

**ORIGINAL DESCRIPTION:** Habe, T. 1971. Dimyidae in Japan and its adjacent areas. The Veliger, 13: 331, 332, p l. 1, figs. 9-19. (As *Dimya japonica* Habe, 1971)

**TYPE LOCALITY:** Tomioka, Kyushu, Japan

**HABITAT:** Attached to other shells or gravel at depths of 20 600 m

**GENERAL DISTRIBUTION:** Southern Korea and Japan to East China Sea; **JEJU:** Hwasoon (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**Superfamily: Pectinoidea Rafinesque, 1815**

**Suborder: Pectinidina Gray, 1854**

**Family: PROPEAMUSSIIDAE Abbott, 1954**

**Genus: *Parvamussium* Sacco, 1897**

**71 *Parvamussium intuscostatum* (Yokoyama 1920)**

(Fig. 50)

**ORIGINAL DESCRIPTION:** Yokoyama, M. 1920. Fossils from the Miura Peninsula and its immediate north. Journal of the College of Science., Imperial University, Tokyo. Vol. 39 (6) pp. 156, 157, pl. 13, figs. 9, 10. (As *Pecten intuscostatus* Yokoyama, 1920)

**TYPE LOCALITY:** Miura, Honshu, Japan

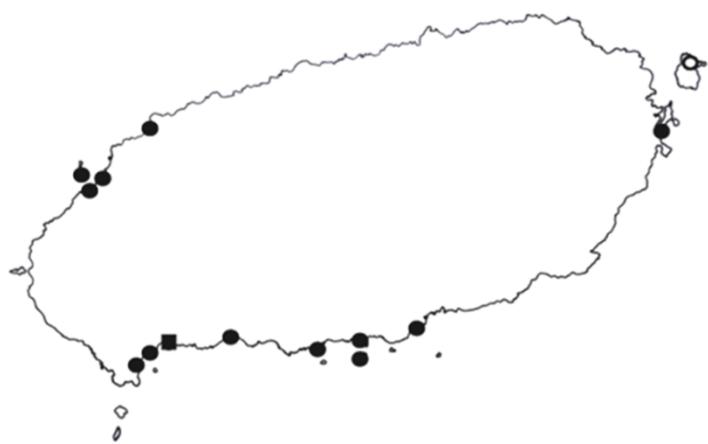

Fig. 49: Distribution of *I. umbonata* (●) and *Dimya japonica* (■)

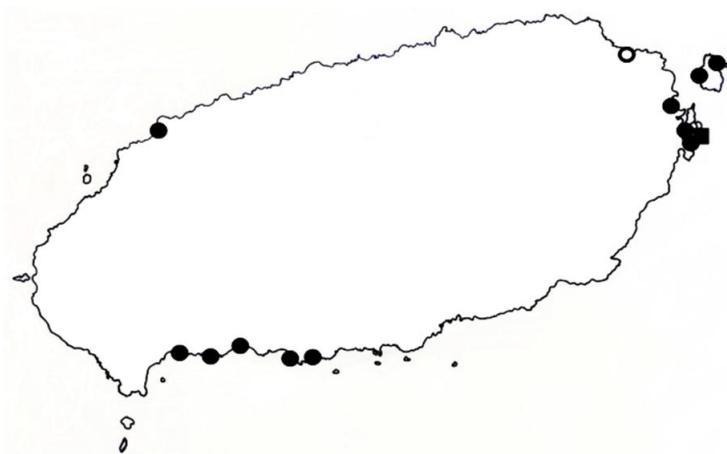

Fig. 50: Distribution of *P. albicans* (●) and *Parvamussium intuscostatum* (■)

Fig. 51: Distribution of *P. excavatus*

**HABITAT:** Fine sand and mud, coarse sand and gravel, at depths of 50–500 m

**GENERAL DISTRIBUTION:** Southern Korea and Japan to East China Sea; **JEJU:**

Seongsan (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** *Parvamussium intuscostatus* (Yokoyama, 1920) is a synonym.

**Family:** PECTINIDAE Rafinesque, 1815

**Subfamily:** Pectininae

**Genus:** *Pecten* O. F. Müller, 1776

**72 *Pecten albicans* (Schroter, 1802)**

(Fig. 50) (Plate 6: E-H)

**ORIGINAL DESCRIPTION:** Schroter, J. S. 1802. *Neue Cochylienarten und Abenderutzgen, Antnerkungen und Berichfigungeri rzuch deti~L intzeischen Sysrern.* Wiedmann Archiv. Zoological Zootomie 3:227-283. (As *Ostrea albicans* Schröter, 1802)

**TYPE LOCALITY:** Unknown

**HABITAT:** Sand and sandy mud at depths of 10 – 150 m

**GENERAL DISTRIBUTION:** Korea and Japan to Taiwan; **JEJU:** Sehwa, Udo (Hagosudong), Udo (Sanhosa), Jongdal-ri, Seongsan, Seopjikoji, Beophwan, Gangjeong, Jungmun, Yerae, Hwasoon, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**73 *Pecten excavatus* Anton, 1838**

(Fig. 51)

**ORIGINAL DESCRIPTION:** Anton, H. E. (1838) Verzeichniss der Conchylien welche sich in der Sammlung von Herrmann Eduard Anton befinden. Herausgegeben von dem Besitzer.

Halle: Anton. 19. (As *Pecten excavatus* Anton, 1838) (Without illustration)

**TYPE LOCALITY:** China

**HABITAT:** Sandy substrate at depth of 10-50 m;

**GENERAL DISTRIBUTION:** Korea and Japan to East China Sea (Check); **JEJU:** Seongsan, Shinyang, Jungmun, Hwasoon, Yongmeori, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** This species exhibits strong radial ribbing also in the interstices of the right valve, not found in the closely-related species *P. puncticulatus* and *P. sinensis*. Also, "*P. excavatus* has a stronger radiate grooved structure, flatter squarish ribs on the left valve, is much more excavated than the other two, with a larger umbo, and is only known in dark reddish-white with a brown border inside. It has a similar size as *puncticulatus*, about 60 mm." (Huber, 2010). Min (2004) lists only "Jejudo". *Pecten puncticulatus* Dunker, 1877 and *Pecten sinensis* Sowerby II, 1842 have been confused with this species.

**Genus: *Ylistrum* Mynhardt and Alejandrino, 2014**

**74 *Ylistrum japonicum* (Gmelin, 1791)**

(Fig. 52) (Plate 6: A-D)

**ORIGINAL DESCRIPTION:** Gmelin, J. F. 1791. Caroli a Linné, systema naturae. Lipsiae (Leipzig), (Beer). 13. Tom. I. Pars VI. (Vol. 1, part 6) p. 3317. (As *Ostrea japonica* Gmelin, 1791) (Without illustration)

**TYPE LOCALITY:** Japan

**HABITAT:** In fine sand, at depths of 10-100 m

**GENERAL DISTRIBUTION:** Western area of East Sea to East China Sea; **JEJU:** Wimi, Seogwipo, Munseom, Beophwan, Gangjeong, Jungmun, Hwasoon

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

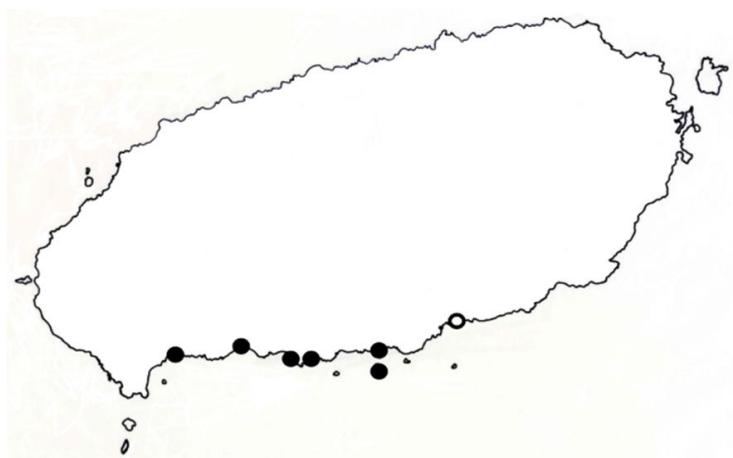

Fig. 52: Distribution of *Y. japonicum*

Fig. 53: Distribution of *D. plica*

Fig. 54: Distribution of *V. jousseaumei*

**REMARKS:** Jeju populations are too small to be commercially viable. Mynhardt *et al.* (2014) have demonstrated that phylogenetic and morphological evidence suggests that *A. japonicum* should be placed in a separate genus, *Ylistrum*. *Amusium japonicum* (Gmelin, 1791) is a synonym.

**Subfamily: Decatopectininae Waller, 1986**

**Genus: *Decatopecten* G. B. Sowerby II, 1839**

**75 *Decatopecten plica* (Linnaeus 1758)**

(Fig. 53)

**ORIGINAL DESCRIPTION:** Linnæus, C. 1758. *Systema naturæ per regna tria naturæ, secundum classes, ordines, genera, species, cum characteribus, differentiis, synonymis, locis.* Tomus I. Editio decima, reformata. Holmiæ. (Salvius). 697. (As *Ostrea plica* Linnaeus, 1758)  
(Without illustration)

**TYPE LOCALITY:** Indian Ocean

**HABITAT:** Free living; sandy substrate, also under rocks and coral slabs, at depths of 20-120 m

**GENERAL DISTRIBUTION:** Japan to Indo-West Pacific; **JEJU:** Jungmun, Yongmeori, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** “Japanese authors usually differentiate a narrow, heavy, thick and strongly convex form as *Decatopecten striatus* (Schumacher 1817). In hinge, dentition, internal color, and usually 5 ribs, Japanese specimens are considered within the variability of *plica*” (Huber, 2010).

**Subfamily: Chlamydinae Teppner, 1922**

**Genus: *Veprichlamys* Iredale, 1929**

**76 *Veprichlamys jousseaumei* (Bavay 1904)**

(Fig. 54)

**ORIGINAL DESCRIPTION:** Bavay, A. (1904). Descriptions de quelques nouvelles espèces du genre *Pecten* et rectifications. *Journal de Conchyliologie. LII*, P.-H. Fischer: Paris: 203, pl. 6, figs, 9, 10. (As *Chlamys jousseaumei* Bavay, 1904)

**TYPE LOCALITY:** Japan

**HABITAT:** On coarse sand and stones, at depth of 50-600 m

**GENERAL DISTRIBUTION:** Southern Korea and Japan; East Sea to South China Sea;

**JEJU:** Hamdeok, Seongsan, Hwasoon, Yongmeori, Sagyei

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** *Chlamys (Coralichlamys) jousseaumei* (Bavay, 1904); *Chlamys empressae* Kuroda, Habe & Oyama, 1971 are synonyms.

**Genus: *Azumapecten* Habe, 1977**

**77 *Azumapecten farreri* (Jones & Preston 1904)**

(Fig. 55)

**ORIGINAL DESCRIPTION:** Jones, K. H. and Preston, H. B. 1904. List of Mollusca collected during the commission of H.M.S. "Waterwitch" in the China Seas, 1900-1903, with descriptions of new species. Proceedings of the Malacological Society of London 6: 149; text fig. (As *Pecten (Chlamys) farreri* Jones & Preston 1904)

**TYPE LOCALITY:** Shandong Peninsula, China

**HABITAT:** Byssally attached to rocks and gravel, able to swim, at depth of 0.5-60 m

**GENERAL DISTRIBUTION:** Sea of Okhotsk to off Taiwan; **JEJU:** Seongsan, Beophwan, Gangjeong, Jungmun, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical?

**REMARKS:** *Chlamys (Azumapecten) farreri farreri* (Jones and Preston, 1904); *Chlamys (Azumapecten) farreri nippensis* (Kuroda, 1932) are synonyms.

**Genus: Scaeochlamys Iredale, 1929**

**78    *Scaeochlamys squamea* Dijkstra & Maestrati, 2009**

(Fig. 56)

**ORIGINAL DESCRIPTION:** Dijkstra H. H. & Maestrati P. 2009. New bathyal species and records of Pectinoidea (Bivalvia: Propeamussiidae and Pectinidae) from Taiwan. Bulletin of Malacology, Taiwan, 33:45-48. pl. 4, figs 32-36. (As *Scaeochlamys squamea* Dijkstra & Maestrati, 2009)

**TYPE LOCALITY:** Taiwan

**HABITAT:** Sand and gravel substrate at depth of 30-300 m

**GENERAL DISTRIBUTION:** Southern Korea and southern Japan to tropical Western Pacific; **JEJU:** Jeju-shi, Udo (Hagosudong), Seongsan, Bomok, Jungmun, Hwasoon, Sagyei, Hyungjaeseom, Biyangdo, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** This species has been attributed to *Laevichlamys lemniscata* (Reeve, 1853) from the south-western Indian Ocean, and is closely related to it, but the right valve of *L. lemniscata* has more irregular ribs (40-50) compared to *S. squamea* (30-35). On the left valve of *S. squamea* there is a shagreen microstructure on the early growth stage which is lacking in *L. lemniscata* (Dykstra and Maestrati, 2009). *Chlamys (Azumpecten) larvata* (Reeve, 1853) (= *Laevichlamys squamosa* (Gmelin, 1791)) in Min (2004) is a misidentification of *S. squamea* (Dijkstra pers. comm.)

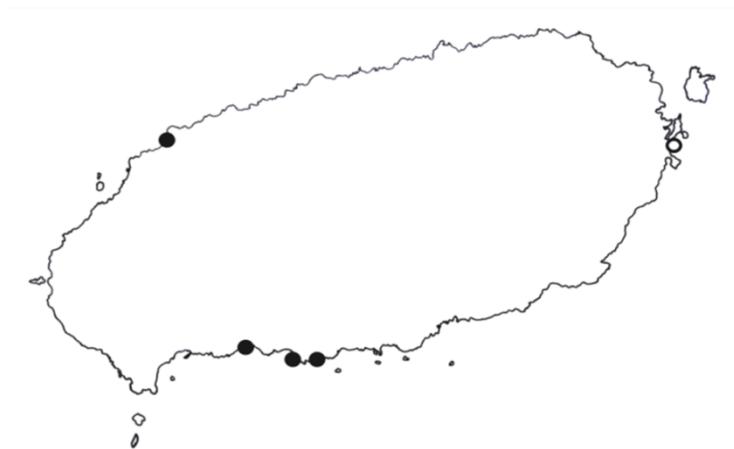

Fig. 55: Distribution of *A. farreri*

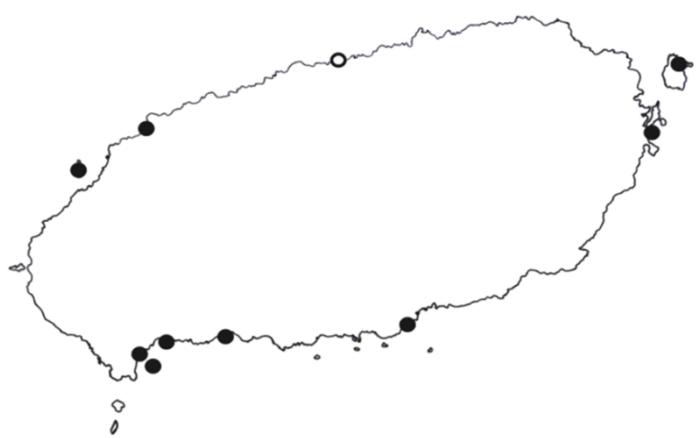

Fig. 56 Distribution of *S. squamea*

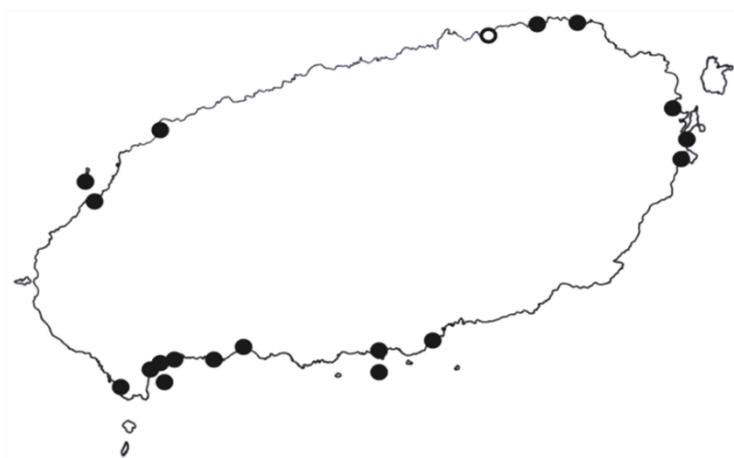

Fig. 57: Distribution of *L. cuneata*

**Genus: *Laevichlamys* Waller, 1993**

**79 *Laevichlamys cuneata* (Reeve, 1853)**

**(Fig. 57)**

**ORIGINAL DESCRIPTION:** Reeve, L. A. 1852–1853. Monograph of the genus *Pecten* In Conchologica Iconica: or, Illustrations of the Shells of Molluscous Animals, vol. 8. Lovell Reeve, London: [unnumbered page], pl. 24, figs. 94, 94a, 95.  
(As *Pecten cuneata* Reeve, 1853)

**TYPE LOCALITY:** Maluku, Indonesia

**HABITAT:** Byssally attached under corals or among coral rubble, on sandy substrate, at depths of 2-150 m

**GENERAL DISTRIBUTION:** East Sea to Northern Australia; **JEJU:** Bukchon-ri, Gimnyeong, Wolpyeong, Jongdal-ri, Seongsan, Shinyang, Bomok, Seogwipo, Munseom, Jungmun, Yerae, Hwasoon, Yongmeori, Sagyei, Hyungjaeseom, Hamo, Keumneung, Biyangdo, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** This species was formerly known as *Pecten irregularis* Sowerby, 1842. Dijkstra (2013) redescribed *L. cuneata*, gave a complete synonymy, and stated that “*Pecten irregularis* Sowerby II, 1842” is a junior primary homonym of *Pecten irregularis* Schlotheim, 1813. Most common Jeju pectinid; usually only single valves found on beaches. *Chlamys* (*Scaeochlamys*) *irregularis* (Sowerby II, 1842), *Pecten irregularis* Sowerby, 1842 are synonyms.

**Family: SPONDYLIDAE Gray, 1826**

**Genus: *Spondylus* Linnaeus, 1758**

**80 *Spondylus varius* Sowerby I, 1827**

(Fig. 58)

**ORIGINAL DESCRIPTION:** Sowerby, G. B., I, 1827. Catalogue of the whole of that splendid collection of rare shells, madrepores, carved paddles, and other curiosities formed by Mr Samuel Stitchbury: 1-4, 1 pl. (Sowerby, London). Page ????, pls. 1-2. (As *Spondylus varius* Sowerby I, 1827)

**TYPE LOCALITY:** Polynesia

**HABITAT:** Attached to dead corals, rocks, debris, shipwrecks, or living free, at depth of 3-60 m

**GENERAL DISTRIBUTION:** Japan to Indo-W. Pacific; **JEJU:** Srongsan, Jungmun, Hwasoon, Yongmeori, Hamo

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Usually possesses reddish area around umbones.

**81 *Spondylus squamosus* K. Schreibers, 1793**

(Fig. 59)

**ORIGINAL DESCRIPTION:** Schreibers, K. 1793. Versuch einer vollständigen Conchylienkenntniß nach Linnes System. Zweyter Band [Vol. 2]. Von den Muscheln. Wien. (Kurzbeck). 157. (As *Spondylus squamosus* K. Schreibers, 1793) (Without illustration)

**TYPE LOCALITY:** East Indies

**HABITAT:** Attached to corals and rocks, at depth of 1-50 m

**GENERAL DISTRIBUTION:** East Sea to Northern Australia; **JEJU:** Iho, Haengwon, Handong, Hado, Udo (Hagosudong), Udo (Sanhosa), Jongdal-ri, Seongsan, Shinyang, Pyoseon, Bomok, Seogwipo, Munseom, Jungmun, Yerae, Hwasoon, Yongmeori, Hamo, Keumneung, Biyangdo, Hyeopjae, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Lamprell and Willan (2000) designated and figured lectotypes of *S. barbatus* and *S. squamosus*, and also described the lectotype of the latter species. “The lectotype of *Spondylus squamosus* Schreibers, 1793 appears inseparable from the lectotype of *S. barbatus* Reeve. 1856, although the former possesses less interstitial spining” (Lamprell and Willan, 2000). They further state that, although the name *S. barbatus* has been generally applied to this species in the literature, the number of usages over the last century has not been enough, in their opinion, to justify an application to the ICZN to suppress *S. squamosus* and retain *S. barbatus*. Huber (2010) also lists *S. cruentus* Lischke, 1868 as a synonym of *S. squamosus*. *Spondylus barbatus cruentus* Lischke, 1868 is a synonym.

## 82 *Spondylus butleri* L. A. Reeve, 1856

(Fig. 60)

**ORIGINAL DESCRIPTION:** Reeve, L. A. 1856: Monograph of the genus *Spondylus*. Conchologia Iconica; or, illustrations of the shells of molluscous animals, vol. 9. London, L. A. Reeve. 18 plates with captions. [Jan. 1856], pl. 4, fig. 14. (As *Spondylus butleri* L. A. Reeve, 1856)

**TYPE LOCALITY:** Philippines

**HABITAT:** Attached to rocks and corals in sheltered areas, from the intertidal zone to depth of 38 m

**GENERAL DISTRIBUTION:** Korea and Japan to Indo-W. Pacific; **JEJU:** Seongsan, Munseom, Jungmun, Yerae, Hwasoon, Yongmeori, Hamo, Keumneung

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** This species has also been known as *S. longitudinalis* Lamarck, 1819.

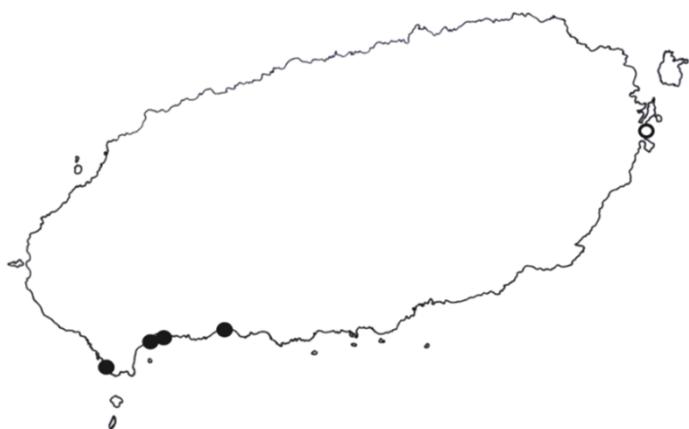

Fig. 58: Distribution of *S. varius*

Fig. 59: Distribution of *S. squamosus*

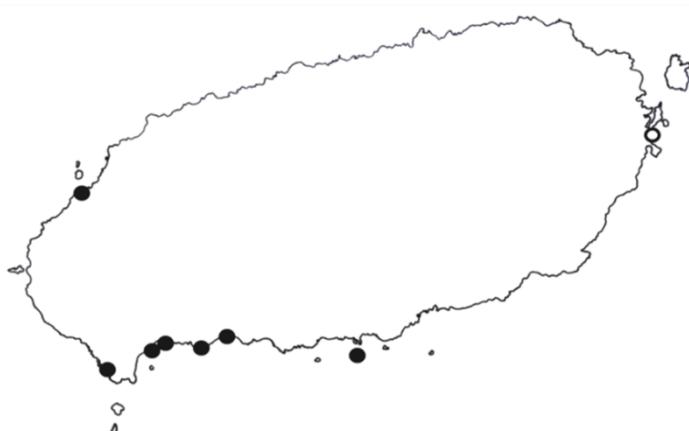

Fig. 60: Distribution of *S. butleri*

However, Finet and Lamprell (2008) discuss problems in selecting a holotype for this species, give figures of the two most likely specimens, and place it in the synonymy of *S. americanus* Hermann, 1791. Subsequently, Huber (2010) states that the type specimen of *Spondylus longitudinalis* Lamarck, 1819 has been lost, the locality and reference are dubious, and accepts *S. butleri* as a valid species. Thus, *Spondylus longitudinalis* Lamarck, 1819 is a synonym.

## **Superfamily: Plicatuloidea Gray, 1854**

### **Family: PLICATULIDAE Gray, 1854**

#### **Genus: *Plicatula* Lamarck, 1801**

##### **83 *Plicatula australis* Lamarck, 1819**

(Fig. 61)

**ORIGINAL DESCRIPTION:** Lamarck, J. P. B. A de Monet de 1819. Histoire naturelle des animaux sans vertèbres, présentant les caractères généraux et particuliers de ces animaux, leur distribution, leurs classes, leurs familles, leurs genres, et la citation des principales espèces qui s'y rapportent; précédée d'une introduction offrant la détermination des caractères essentiels de l'animal, sa distinction du végétal et des autres corps naturels, enfin, l'exposition des principes fondamentaux de la zoologie. Tome sixième. Ire. partie. Paris. 185. (As *Plicatula australis* Lamarck, 1819) (Without illustration)

**TYPE LOCALITY:** Australia (“Ile Fourneau [near Mauritius]” (Lamarck – error))

**HABITAT:** Attached to rocks, dead coral, and gravel, often encrusted, from the intertidal zone to depth of 25 m

**GENERAL DISTRIBUTION:** Southern Korea and Japan to Indo-W. Pacific: **JEJU:** Shinyang, Bomok, Seogwipo, Hwasoon, Sagyei

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**84 *Plicatula horrida* Dunker, 1882**

(Fig. 61)

**ORIGINAL DESCRIPTION:** Dunker, W. 1882. Index Molluscorum Maris Japonici. Cassel: Fischer, 247, pl. 11, figs. 6, 7. (As *Plicatula horrida* Dunker, 1882)

**TYPE LOCALITY:** Japan/China

**HABITAT:** Rubble and coral, at depth of 10-20 m

**GENERAL DISTRIBUTION:** Southern Korea and Japan to East China Sea; **JEJU:** Sagyei (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**Order: LIMIDA Moore, 1852**

**Superfamily: Limoidea Rafinesque, 1815**

**Family: LIMIDAE Rafinesque, 1815**

**Genus: *Lima* Bruguière, 1797**

**85 *Lima (Allolima) vulgatula* Yokoyama, 1922**

(Fig. 62)

**ORIGINAL DESCRIPTION:** Yokoyama, M. (1922) Fossils from the Upper Musashino of Kazusa and Shimosa. Journal of the College of Science, Tokyo Imperial University, 44, 179, pl. 17; figs 18, 19. (As *Lima vulgatula* Yokoyama, 1922)

**TYPE LOCALITY:** Shito. Chiba Prefecture? Japan (fossil)

**HABITAT:** On sand and gravel, at depth of 50 - 150m

**GENERAL DISTRIBUTION:** Korea; Japan, **JEJU:** Hwasoon, Gwakji

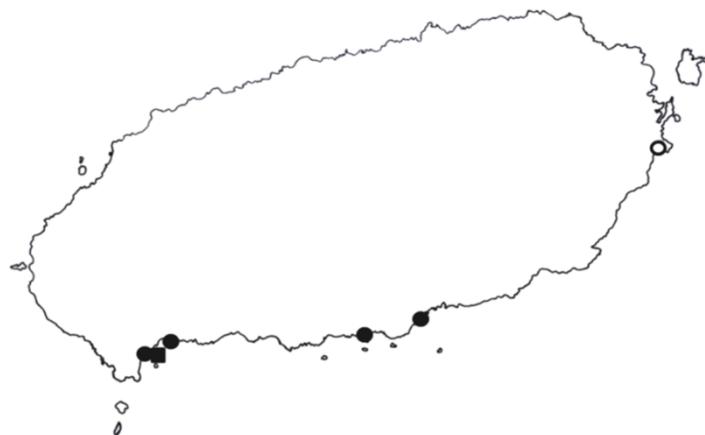

Fig. 61: Distribution of *P. australis* (●) and *P. horrida* (■)

Fig. 62: Distribution of *L. (A.) vulgatula* (●), *L. (A.) fujitai* (■), and *L. (Lima) zushiensis* (▲)

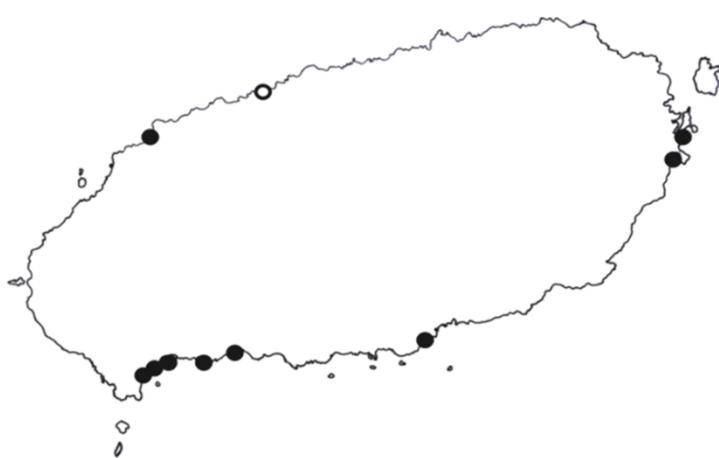

Fig. 63: Distribution of *C. annulata*

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** *L. fujitai* is smaller and more convex with more ribs, 28-35, than *L. vulgatula*. Yokoyama, 1922 described *L. vulgatula* as a Honshu fossil; Okutani (2000 pl. 443 fig. 5) depicted it living from Honshu. Although attempts have been made to synonymize both species, they are regarded as separate (Huber, 2010). *Lima vulgata* Yokoyama, 1922 (misspelling) is a synonym.

**86 *Lima (Allolima) fujitai* K. Oyama, 1943**

(Fig 62)

**ORIGINAL DESCRIPTION:** Oyama, K. 1943. Conchologia Asiatica, 1, Pt. 1, Limidae, 1-74, pls. 1-14, 12 figs. in text. (As *Lima fujitai* Oyama, 1943)

**TYPE LOCALITY:** Japan

**HABITAT:** Byssally attached to sand and gravel, at depth of 40 – 300 m

**GENERAL DISTRIBUTION:** Korea and Japan to S. China Sea; **JEJU:** Hwasoon (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** This species possesses 28-35 ribs; a similar species, *L. vulgatula*, has 22 broad, flattish ribs. “The synonymy of *vulgatula* with *fujitai* as proposed by Koyama *et al.* (1981) and Higo *et al.* (1999) appears from size and ribbing unlikely” (Huber, 2010).

**87 *Lima (Lima) zushiensis* Yokoyama, 1920**

(Fig. 62)

**ORIGINAL DESCRIPTION:** Yokoyama, M. 1920. Fossils from the Miura Peninsula and its immediate north. Journal of the College of Science., Imperial University, Tokyo. Vol. 39 (6), p. 148, pl. XII, fig. 8. (As *Lima zushiensis* Yokoyama, 1920)

**TYPE LOCALITY:** Yokosuka Zone, Zuschi, Sagami Bay, Japan (fossil)

**HABITAT:** Byssally attached to rock and stones; at depth of 30-200 m

**GENERAL DISTRIBUTION:** Southern Korea and Japan; **JEJU:** Seongsan

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-lowboreal

**Genus:** *Ctenoides* Mörch, 1853

**88    *Ctenoides annulata* (Lamarck, 1819)**

(Fig. 63)

**ORIGINAL DESCRIPTION:** Lamarck, J. P. B. A de Monet de 1819. Histoire naturelle des animaux sans vertèbres, présentant les caractères généraux et particuliers de ces animaux, leur distribution, leurs classes, leurs familles, leurs genres, et la citation des principales espèces qui s'y rapportent; précédée d'une introduction offrant la détermination des caractères essentiels de l'animal, sa distinction du végétal et des autres corps naturels, enfin, l'exposition des principes fondamentaux de la zoologie. Tome sixième. Ire. partie. Paris. 157. (As *Lima annulata* Lamarck, 1819) (Without illustration)

**TYPE LOCALITY:** Mauritius

**HABITAT:**; Loosely byssally attached to corals, rocks, and gravel, in crevices, at depth of 5 200 m

**GENERAL DISTRIBUTION:** Southern Korea and southern Japan to Indo-W. Pacific; (Check); **JEJU:** Iho, Seongsan, Shinyang, Bomok, Jungmun, Yerae, Hwasoon, Yongmeori, Sagyei, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** The main differences between *C. annulata* and *C. lischkei* are larger size, with fewer and prickly-scaled ribs in the former, whereas the latter has more and smoother ribs and stays smaller. *Annulata* is much more common.

**89 *Ctenoides lischkei* (Lamy, 1930)**

(Fig. 64)

**ORIGINAL DESCRIPTION:** Lamy, E., 1930. Quelques cas teratologiques chez des gasteropodes. Journal of Conchyliologie 74(3):222-225, pls. 2, 3. (As *Lima lischkei* Lamy, 1930 (New name for *Lima japonica* Dunker, 1877)

**TYPE LOCALITY:** Japan

**HABITAT:** Attached to rocks and gravel, from depths of 2-160 m

**GENERAL DISTRIBUTION:** Japan to Western Pacific; **JEJU:** Iho, Gimnyeong, Wolpyeong, Seongsan, Shinyang, Gangjeong, Jungmun, Yerae, Hwasoon, Yongmeori, Sagyei, Hamo, Keumneung, Biyangdo, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Often quite common on beaches as dead, single valves. *C. lischkei* is smaller with more and smoother ribs than *C. annulata*. *Lima japonica* Dunker, 1877. *Lima dunkeri* Smith, 1885, *Lima lischkei* Lamy, 1930 are synonyms.

**Genus: *Limaria* Link, 1807**

**90 *Limaria (Platilimaria) hirasei* (Pilsbry, 1901)**

(Fig. 65)

**ORIGINAL DESCRIPTION:** Pilsbry, H.A. 1901. *New Mollusca from Japan, the Loo Choo Islands, Formosa and the Philippines*. Proceedings of the Academy of Natural Sciences of Philadelphia 53: 209. (As *Lima hirasei* Pilsbry, 1901) (Without illustration)

**TYPE LOCALITY:** Hirado, Hizen (Nagasaki Prefecture, Kyushu, Japan)

**HABITAT:** Among rocks and gravel, at depths of 1-50 m

**GENERAL DISTRIBUTION:** Korea and Japan to Hong Kong; **JEJU:** Seongsan, Munseom,

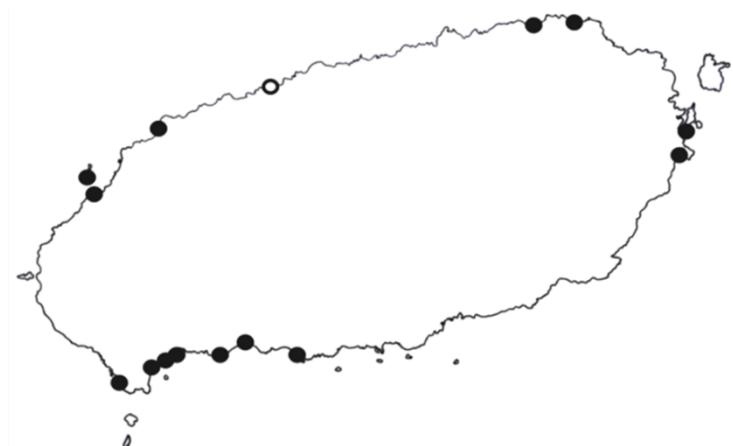

Fig. 64: Distribution of *C. lischkei*

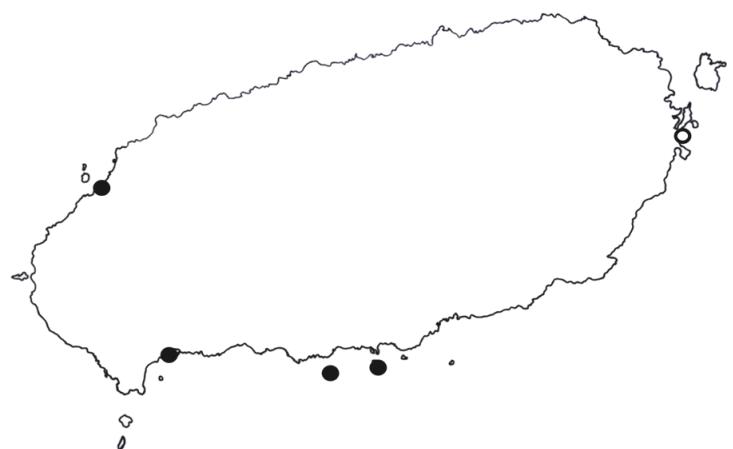

Fig. 65: Distribution of *L. (P.) hirasei*

Fig. 66: Distribution of *L. (L.) vladivostokensis* (●), *L. (L.) nipponica* (■), and *L. (s.l.) kurodai* (▲)

Bumseom, Hwasoon, Hyeopjae

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical (Check)

**REMARKS:** Usually found dead on beaches after storms; very fragile. *L. hirasei*, is the type species of *Platilimaria*.

**Genus: *Limatula* S. V. Wood, 1839**

**91 *Limatula (Limatula) vladivostokensis* (Scarlato, 1955)**

(Fig. 66)

**ORIGINAL DESCRIPTION:** Scarlato, O. 1955. Atlas of the Invertebrates of the Far-Eastern Seas of the U.S.S.R.: 19, pl. 51, f. 4. (As *Lima vladivostokensis* Scarlato, 1955)

**TYPE LOCALITY:** Vladivostok, Eastern Russia

**HABITAT:** Fine sand, at depths of 50-400 m

**GENERAL DISTRIBUTION:** Southern Kamchatka and East Sea to Korea Strait; **JEJU:** Hwasoon (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-boreal

**REMARKS:** *Limaria vladivostokensis* is a somewhat humped species, growing up to 18.2 mm in Russian waters. *L. vladivostokensis* does not appear to occur on the Japanese side of the East Sea (Huber, 2010)

**92 *Limatula (Limatula) nippona* Habe, 1960**

(Fig. 66)

**ORIGINAL DESCRIPTION:** Habe, T., 1960. Eleven new bivalves from Tanabe Bay, Wakayama Prefecture, Japan. *Publications of the Seto Marine Biological Laboratory* 8: 282. (As *Limatula nippona* Habe, 1960) (Without illustration)

**TYPE LOCALITY:** Tanabe Bay, Wakayama Prefecture, Japan

**HABITAT:** Fine sand and sandy mud, at depths of 5-30 m

**GENERAL DISTRIBUTION:** Korea and Japan to East China Sea; **JEJU:** Shinyang, Hwasoon (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-lowboreal

**REMARKS:** *Limaria nipponica*, used by some authors, is an error for *L. nipponica*.

**93 *Limatula (s.l.) kurodai* K. Oyama, 1943**

(Fig. 66)

**ORIGINAL DESCRIPTION:** Oyama, K. 1943. *Conchologia Asiatica*, 1, Pt. 1, Limidae, 24, 25. (As *Limatula kurodai* Oyama, 1943)

**TYPE LOCALITY:** Ibaraki Prefecture, Honshu, Japan

**HABITAT:** Fine sand and sandy mud, from depths of 10-300 m

**GENERAL DISTRIBUTION:** Korea and Japan; **JEJU:** Hwasoon (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**94 *Limatula (Limatuletta) japonica* A. Adams, 1864**

(Fig. 67)

**ORIGINAL DESCRIPTION:** A. Adams. 1863b. Description of a New Genus and of Twelve New Species of Mollusca. *Proceedings of the Zoological Society of London*, p. 509. (As *Limatula japonica* A. Adams, 1864 (Check date)) (Without illustration)

**TYPE LOCALITY:** Japan

**HABITAT:** Sandy bottoms, at depths of 20-600 m

**GENERAL DISTRIBUTION:** Aleutian Islands to Southern Japan; **JEJU:** Shinyang (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Lowboreal

**REMARKS:** This is the type of *Limatuletta*. This genus includes species which are ovate, inflated, and strongly radially ribbed, with weak auricles, a smooth hinge, and broad resilifer.

**95 *Limatula (Stabilima) bullata* (Born, 1778)**

(Fig. 67)

**ORIGINAL DESCRIPTION:** Born, I. 1778. Index rerum naturalium Musei Cæsarei Vindobonensis. Pars I.ma. Testacea. Verzeichniß der natürlichen Seltenheiten des k. k. Naturalien Cabinets zu Wien. Erster Theil. Schalthiere. Pp. [1-40]. 95. 96, (As *Ostrea bullata* Born, 1778). (Without illustration)

**TYPE LOCALITY:** Sorsogon, Philippines (corrected)

**HABITAT:** On coral sand and fine sand, at depths of 8 - 100m

**GENERAL DISTRIBUTION:** East Sea to Indonesia; **JEJU:** Seongsan, Shinyang, Hwasoon, Sagyei

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Born's holotype of *bullata*, a single valve from "Barbados", is 37 mm. The corrected type locality is Sorsogon, Philippines. (Huber, 2010)

**Subclass: HETERODONTA Newmayr, 1884**

Order: Lucinida Gray, 1854

**Superfamily: Lucinoidea J. Fleming, 1828**

**Family: LUCINIDAE J. Fleming, 1828**

**Subfamily: Lucininae Fleming, 1828**

**Genus: Ctena Mörcb, 1861**

**96 *Ctena bella* (Conrad, 1837)**

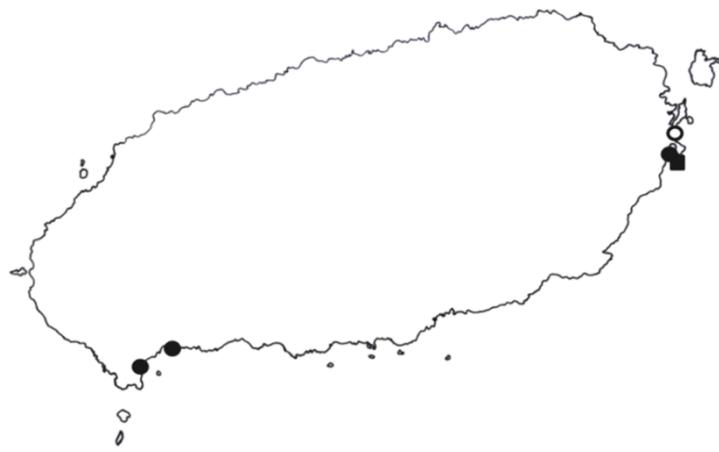

Fig. 67: Distribution of *L. (S.) bullata* (●) and *L. (Limatuletta.) japonica* (■)

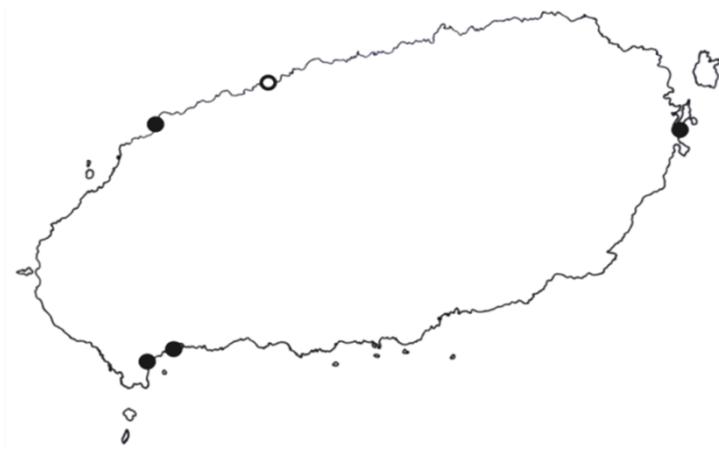

Fig. 68: Distribution of *C. bella*

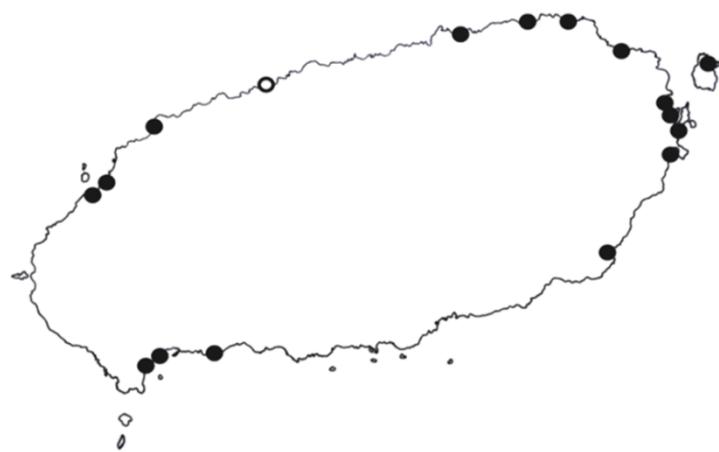

Fig. 69: Distribution of *P. pisidium*

(Fig. 68)

**ORIGINAL DESCRIPTION:** Conrad, T. A. (1837). Descriptions of new marine shells, from Upper California . Journal of the Academy of Natural Sciences Philadelphia. 7 (2): 254, pl. 19, fig. 11. (As *Lucina bella* Conrad, 1837)

**TYPE LOCALITY:** San Diego, California, U.S.A.

**HABITAT:** Sand in lower intertidal zone to depth of 20 m; “Common in muddy marshes (Conrad, 1837)

**GENERAL DISTRIBUTION:** Southern Korea and southern. Japan to Indo-W. Pacific; Hawaii; **JEJU:** Iho, Seongsan, Hwasoon, Sagyei, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** *Epicodakia bella* (Conrad, 1837) is a synonym.

**Genus:** *Pillucina* Pilsbry, 1921

**97 *Pillucina pisidium* (Dunker, 1860)**

(Fig. 69)

**ORIGINAL DESCRIPTION:** Dunker, G. 1859-1860. Neue japanische Mollusken. *Malakozoologische Blatter*, volume 6, page 227. (Illustration in Dunker, 1861: 28, pl. 3, fig. 9) (As *Lucina pisidium* Dunker 1860)

**TYPE LOCALITY:** Dejima, Nagasaki City, Japan

**HABITAT:** Mud and fine sand from the intertidal zone to depth of 90 m

**GENERAL DISTRIBUTION:** Korea and Japan to Indo-West Pacific; **JEJU:** Iho, Hamdeok, Gimnyeong, Wolpyeong, Sehwa, Udo (Hagosudong), Jongdal-ri, Ojo-ri, Seongsan, Shinyang, Pyoseon, Yerae, Yongmeori, Sagyei, Keumneung, Hyeopjae, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** A widely-distributed species, it is similar to *P. neglecta*.

**98 *Pillucina neglecta* Habe, 1960**

(Fig. 70)

**ORIGINAL DESCRIPTION:** Habe, T., 1960b. Eleven new bivalves from Tanabe Bay, Wakayama Prefecture, Japan. *Publications of the Seto Marine Biological Laboratory* 8: 282, figs. 7-9. (As *Pillucina neglecta* Habe, 1960)

**TYPE LOCALITY:** Tanabe Bay, Wakayama Prefecture, Japan

**HABITAT:** Sandy mud at depth of 10-30 m

**GENERAL DISTRIBUTION:** Korea; S. Japan (Check); JEJU: Seongsan (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** This species is similar to *P. pisidium* but can be distinguished by the smaller size, greater inflation, more deeply impressed lunule, and the presence of a strong lateral tooth in the right valve.

**Genus: *Parvilucina* Dall, 1901**

**99 *Parvilucina yamakawai* (Yokoyama, 1920)**

(Fig. 70)

**ORIGINAL DESCRIPTION:** Yokoyama, M. 1920. Fossils from the Miura Peninsula and its immediate north. Journal of the College of Science, Imperial University, Tokyo. Vol. 39 (6) p. 135; pl. 10, fig. 9. (As *Lucina yamakawai* Yokoyama, 1920)

**TYPE LOCALITY:** Shimo-Miyata, Yokosuka City, Honshu, Japan (fossil)

**HABITAT:** Sandy mud, at depth of 5-50 m

**GENERAL DISTRIBUTION:** Korea and Japan to East China Sea; Hawaii; JEJU: Hwasoon, Sagyei

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** This species belongs to the genus *Parvilucina* and can be easily distinguished from *Pillucina* by the absence of an internal ligament. *Pillucina (Sydlorina) yamakawai* (Yokoyama, 1920) is a synonym,

**Genus: *Chavania* Glover & J. D. Taylor, 2001**

**100 *Chavania striata* (Tokunaga, 1906)**

(Fig. 71)

**ORIGINAL DESCRIPTION:** Tokunaga, S., 1906. Fossils from the environs of Tokyo. *Journal of the College of Science, Imperial University, Tokyo* 21: 53–54. pl. 3, fig. 14. (As *Lasaea striata* Tokunaga, 1906

**TYPE LOCALITY:** Oji, Tokyo City, Japan (Pleistocene fossil)

**HABITAT:** Sandy mud, from the intertidal zone to depth of 250 m

**GENERAL DISTRIBUTION:** Central Indo-West Pacific (India to Japan, Marshall Is.);

**JEJU:** Jongdal-ri, Seongsan, Shinyang, Pyoseon, Jungmun, Sagyei

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** *Chavania striata* shows considerable variation in shape, and this is likely typical of the species throughout its range. Differs from *Pillucina* in the lack of prominent radial ribs. *Pillucina (Wallucina) striata* (Tokunaga, 1906) and *Wallucina striata* (Tokunaga, 1906) are synonyms.

**Subfamily: Myrteniae**

**Genus: *Myrtea* Turton, 1822**

**101 *Myrtea delicatula* A. Adams, 1862**

(Fig. 71)

**ORIGINAL DESCRIPTION:** Adams, A. 1862. On Some New Species of Acephalous

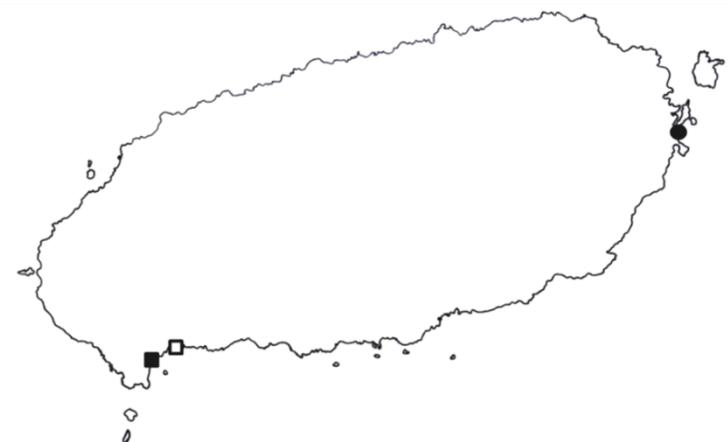

Fig. 70: Distribution of *P. neglecta* (●) and *Parvilucina yamakawai* (■).

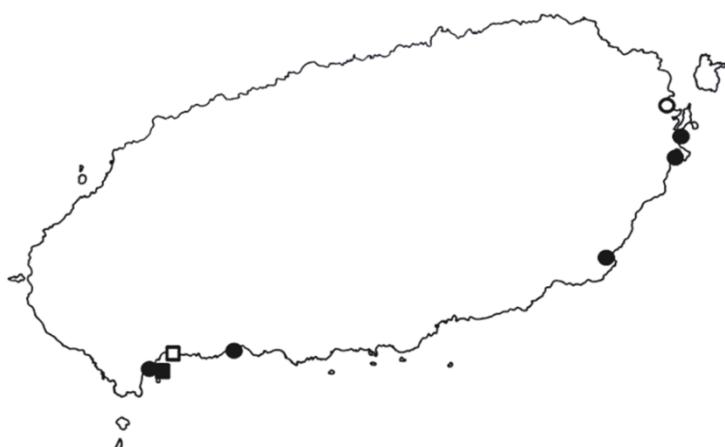

Fig. 71: Distribution of *C. striata* (●) and *Myrtea delicatula* (■).

Fig. 72: Distribution of *L. japonica* (●) and *Leucosphaera oyamai* (■).

Mollusca from the Sea of Japan. Annals and Magazine of Natural History, series 3, volume 9, page 226, (As *Myrtea delicatula* A. Adams, 1862) (Without illustration)

**TYPE LOCALITY:** Korea Strait

**HABITAT:** Coarse sand, from intertidal zone to depth of 20 m

**GENERAL DISTRIBUTION:** Korea and Japan; **JEJU:** Hwasoon, Sagyei

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical (Check)

**REMARKS:** May be confused with *Ctena bella*, but *M. delicatula* is smaller and not as strongly ribbed.

**Genus:** *Lucinoma* Dall, 1901

**102    *Lucinoma japonica* Habe, 1958**

(Fig. 72)

**ORIGINAL DESCRIPTION:** Habe, T. (1958). Report on the Mollusca chiefly collected by the S. S. Soyo-Maru of the Imperial Fisheries Experimental Station on the continental shelf bordering Japan during the years 1922-1930. Part 4. Lamellibranchia (2). Seto Marine Biological Laboratory, Publications [Kyoto University]. 7(1) 28, (As *Lucinoma japonica* Habe, 1958) (Without illustration)

**TYPE LOCALITY:** Off Yamaguchi Prefecture, Honshu, Japan

**HABITAT:** Sandy-mud at depth of 100-150 m

**GENERAL DISTRIBUTION:** Southern Korea and southern Japan; East Sea (western area));

**JEJU:** Bukchon-ri, Seongsan, Sagyei

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** *Gonimyrtaea japonicum* (Habe, 1958) is a synonym.

**Subfamily: Leucosphaerinae J. D. Taylor & Glover, 2011**

**Genus: *Leucosphaera* J. D. Taylor & Glover, 2005**

**103 *Leucosphaera oyamai* (Habe, 1962)**

(Fig. 72)

**ORIGINAL DESCRIPTION:** Habe, T. 1962 *Leptinaxis oyamai* Habe. 1962. Colored Illustrations of the Shells of Japan, 2 (ed. 2), 142-143, app. 46, pl. 64, fig. 8. (As *Leptinaxis oyamai* Habe, 1962)

**TYPE LOCALITY:** Unavailable

**HABITAT:** Sandy mud bottom at depth of 10-50 m

**GENERAL DISTRIBUTION:** Korea; Japan; East Sea (western area); **JEJU:** Shinyang, Sagyei (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical (Check)

**REMARKS:** Lutaenko and Noseworthy (2012) do not record this species in the western area of the East Sea. Moved from Thyasiridae (Okutani, 2000; Min, 2004) to Lucinidae (Taylor, 2014); according to Taylor, *Leucosphaera oyamai* (Habe, 1962) is a temporary name. *Leptinaxis oyamai* Habe, 1962 is a synonym.

**Superfamily: Thyasiroidea Dall, 1900**

**Family: THYASIRIDAE Dall, 1900**

**Genus: *Thyasira* Lamarck, 1818**

**104 *Thyasira tokunagai* (Kuroda & Habe, 1951)**

(Fig. 73)

**ORIGINAL DESCRIPTION:** Kuroda, T. & T. Habe, 1951. Nomenclatorial notes. In: T. Kuroda, (ed.). Illustrated catalogue of Japanese shells 13: (As *Thyasira tokunagai* Kuroda and Habe, 1951)

**TYPE LOCALITY:** Unavailable

**HABITAT:** Mud, at depth of 5-50 m

**GENERAL DISTRIBUTION :** Korea and Japan; **JEJU:** Shinyang, Hwasoon (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**105 *Thyasira kawamurai* (Habe, 1951)**

**ORIGINAL DESCRIPTION:** Habe, T. 1951. Genera of Japanese Shells; Pelecypoda. Kyoto : T. Habe. Vol. 1, pp. 1-96, figs. 1-192. (As *Thyasira kawamurai* Habe, 1951)

**TYPE LOCALITY:** Unavailable

**HABITAT:** Fine sand, at depth of 50-200 m

**GENERAL DISTRIBUTION:** Korea; Japan (Check); **JEJU:** ("Jejudo" (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** *Parathyasira kawamurai* (Habe, 1951) is a synonym.

Order Carditida Dall, 1889

**Superfamily Carditoidea Féruccac, 1822**

**Family: CARDITIDAE Féruccac, 1822**

**Subfamily: Carditinae Féruccac, 1822**

**Genus: *Cardita* Bruguière, 1792**

**106 *Cardita leana* Dunker, 1860**

(Fig. 74)

**ORIGINAL DESCRIPTION:** Dunker, G. 1859-1860. Neue japanische Mollusken.

*Malakozoologische Blätter*, volume 6, 223. (As *Cardita leana* Dunker, 1860) (Without illustration)

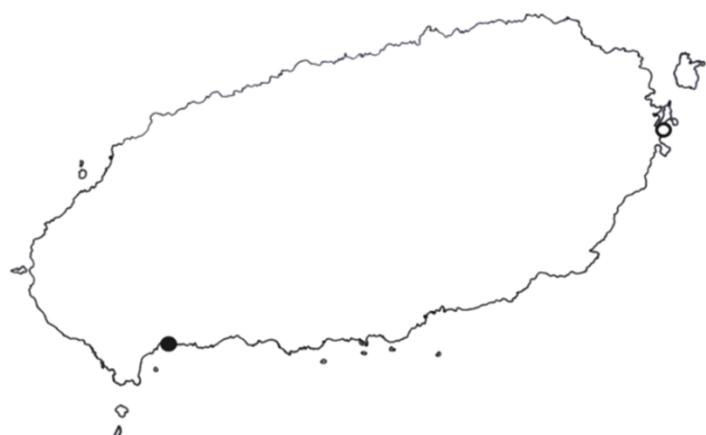

Fig. 73: Distribution of *T. tokunagai*

Fig. 74: Distribution of *C. leana*

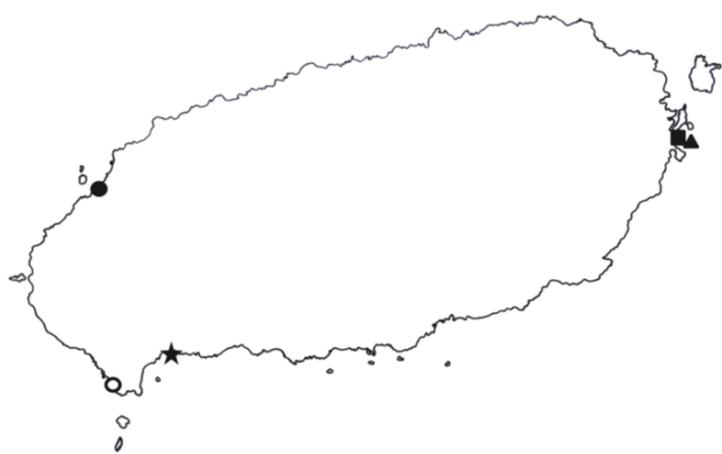

Fig. 75: Distribution of *C. ferruginosa* (●), *Pleuromeris pygmaea* (■), *Centrocardita soyoae* (▲), and *Carditellona pulchella* (★)

**TYPE LOCALITY:** Western Kyushu, Japan

**HABITAT:** Byssally attached to stones among gravel, on underside of rocks, from the intertidal zone to depth of 20m

**GENERAL DISTRIBUTION:** Korea and Japan to Taiwan; **JEJU:** Iho, Hamdeok, Bukchon-ri, Wolpyeong, Haengwon, Handong, Sehwa, Udo (Hagosudong), Udo (Sanhosa), Udo (Geomeollae), Jongdal-ri, Songsan, Seopjikoji, Shinyang, Pyoseon, Supseom, Seogwipo, Munseom, Seogundo, Gangjeong, Jungmun, Yerae, Daepyeong, Hwasoon, Yongmeori, Sagyei, Songaksan, Gapado, Marado, Hamo, Chagwi-do, Keumneung, Biyangdo, Hyeopjae, Suwon, Gwideok, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** *Cardita cumingiana* Dunker, 1860 is a synonym.

**107 *Cardita (s.l.) ferruginosa* (Adams & Reeve 1850)**

(Fig. 75)

**ORIGINAL DESCRIPTION:** Adams, A. & Reeve, L. 1848–50. Mollusca. In: A. Adams, ed. The Zoology of the voyage of H.M.S. Samarang; under the command of Captain Sir Edward Belcher, C.B., F.R.A.S., F.G.S. during the years 1843–1846. Reeve, Benham, and Reeve, London. 76., pl. 21, fig. 21. (As *Cardita ferruginosa* Adams and Reeve, 1850).

**TYPE LOCALITY:** “Philippine Archipelago” (“erroneous” (Huber, 2010))

**HABITAT:** In sand and mud at depth of 5-120 m

**GENERAL DISTRIBUTION:** Korea and southern Japan to East China Sea; **JEJU:** Hamo, Hyeopjae

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** This is a small, quadrate form, quite variable in color and shape with rounded ribs which are smooth or with a very weak commarginal sculpture.

**Subfamily: Carditamerinae Chavan, 1969**

**Genus: *Pleuromeris* Conrad, 1867**

**108 *Pleuromeris pygmaea* (Kuroda & Habe 1951)**

(Fig. 75)

**ORIGINAL DESCRIPTION:**; Kuroda and Habe. 1951. Genera of Japanese Shells; Pelecypoda. 2. Kairui-Bumken-Kankokai, Kyoto. pp 97-186. (As *Venericardia pygmaea* Kuroda & Habe, 1951)

**TYPE LOCALITY:** Western Kyushu, Japan

**HABITAT:** Byssally attached to stones, among rubble, from the intertidal zone to depth of 100 m,

**GENERAL DISTRIBUTION:** Korea and Japan; **JEJU:** Seongsan (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** *Venericardia pygmaea* is a new name for *Cardita abbreviata*. Sowerby III, 1903 (Huber, 2010).

**Genus: *Centrocardita* Sacco, 1899**

**109 *Centrocardita soyaoe* (T. Habe, 1958)**

(Fig. 75)

**ORIGINAL DESCRIPTION:** Habe, T. 1958. Report on the Mollusca chiefly collected by the S. S. Soyo-Maru of the Imperial Fisheries Experimental Station on the continental shelf bordering Japan during the years 1922-1930. Part 4. Lamellibranchia (2). Seto Marine Biological Laboratory, Publications [Kyoto University]. 7(1) 23. (As *Venericardita (Megacardita) soyaoe* Habe, 1958) (Without illustration)

**TYPE LOCALITY:** Off Shimane Prefecture, East Sea

**HABITAT:** Among coarse sand and stones at depth of 50-300 m

**GENERAL DISTRIBUTION:** East Sea to East China Sea; **JEJU:** Seongsan (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** This species is neither a *Megacardita* nor a *Pleuromeris*, but instead resembles *Centrocardita* better in key features. *C. soyaoe* is a small species, approximately 10 mm in length, and found at depths of 100-200 m. It is also known from the East China Sea, but with several different names (Huber, 2010). *Pleuromeris soyaoe* (Habe, 1958) is a synonym.

**Subfamily: Carditellinae Kuroda, Habe & Oyama, 1971**

**Genus: *Carditellona* Iredale, 1936**

**110 *Carditellona pulchella* (Lynge 1909)**

(Fig. 75)

**ORIGINAL DESCRIPTION:** Lynge. 1909. The Danish Expedition to Siam, (1899-1900. IV. Marine Lamellibranchiata. Kongelige Danske Videnskabernes Selskabs Skrifter, 7. Raekke, Naturvidenskabelig og Mathematisk Afdeling, Kjbenhavn, 5(3): 164, pl.III, Figs. 6 8. (As *Carditella pulchella* Lynge, 1909 (Astartidae))

**TYPE LOCALITY:** Gulf of Thailand

**HABITAT:** In fine to coarse sand at depth of 2-150 m

**GENERAL DISTRIBUTION:** East Sea to South China Sea; **JEJU:** Hwasoon (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-lowboreal

**REMARKS:** *Carditella (Carditellona) hanzawai* (Nomura, 1933) is a synonym

**Genus: *Carditellopsis* Iredale, 1936**

**111 *Carditellopsis toneana* (Yokoyama, 1922)**

(Fig. 76)

**ORIGINAL DESCRIPTION:** Yokoyama, M. 1922. Fossils from the Upper Musashino of Kazusa and Shimosa. Journal of the College of Science, Tokyo Imperial University, 44, 163, pl. 13; figs. 6, 7. (As *Venericardia toneana* Yokoyama, 1922)

**TYPE LOCALITY:** Shito, Boso Peninsula, Japan (fossil)

**HABITAT:** In fine sand at depth of 20-150 m

**GENERAL DISTRIBUTION:** Japan to South China Sea; **JEJU:** Supjikoji, Bomok, Munseom, Hwasoon

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**Superfamily: Crassatelloidea Féruccac, 1822**

**Family: CRASSATELLIDAE Féruccac, 1822**

**Subfamily: Crassatellinae Féruccac, 1822**

**Genus: *Indocrassatella* Chavan, 1952**

**112 *Indocrassatella oblongata* (Yokoyama, 1920)**

(Fig. 76)

**ORIGINAL DESCRIPTION:** Yokoyama, M. 1920. Fossils from the Miura Peninsula and its immediate north. Journal of the College of Science, Imperial University, Tokyo. Vol. 39 (6), 142, pl. 11; figs. 8, 9. (As *Crassatella oblongata* Yokoyama, 1920)

**TYPE LOCALITY:** Koshiba (formation), Miura Peninsula, Honshu, Japan (fossil)

**GENERAL DISTRIBUTION:** Southern Japan to East China Sea; **JEJU:** Hwasoon (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** *Indocrassatella* contains species which are rather inflated, subquadrate, quite thin and small with well-marked, impressed, almost smooth, lunule and escutcheon, and a crenulate margin. They have a rather dense commarginal sculpture. All species live in deeper water.

Order: VENERIDA Gray, 1854

**Superfamily: Arcticoidea Newton, 1891**

**Family: TRAPEZIDAE Lamy, 1920**

**Genus: *Coralliophaga* Blainville, 1824**

**113 *Coralliophaga coralliophaga* (Gmelin, 1791)**

(Fig. 76)

**ORIGINAL DESCRIPTION:** Gmelin, J. F. 1791. Caroli a Linné, systema naturae. Lipsiae (Leipzig), (Beer). 13. Tom. I. Pars VI. (Vol. 1, part 6) p. 3305. (As *Chama coralliophaga* Gmelin, 1791) (Without illustration)

**TYPE LOCALITY:** Unknown

**HABITAT:** Embedded in *Porites* coral and other calcareous substrate, from intertidal zone to depth of 20 m.

**GENERAL DISTRIBUTION:** Korea and Northern Japan to Indo-Pacific; North Carolina to Brazil; South Africa; **JEJU:** Jongdal-ri

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**RELEVANT COMMENTS:** Species of *Coralliophaga* are quite variable as a result of their boring behaviors.

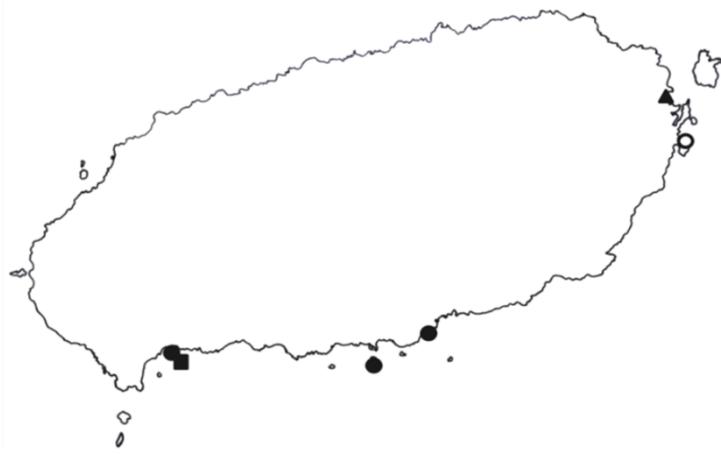

Fig. 76: Distribution of *C. toneana* (●), *Indocrassatella oblongata* (■), and *Coralliophaga coralliophaga* (▲)

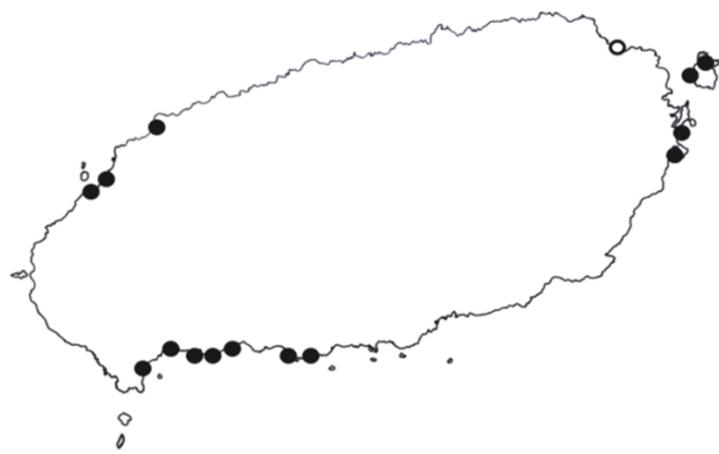

Fig. 77: Distribution of *A. burchardi*

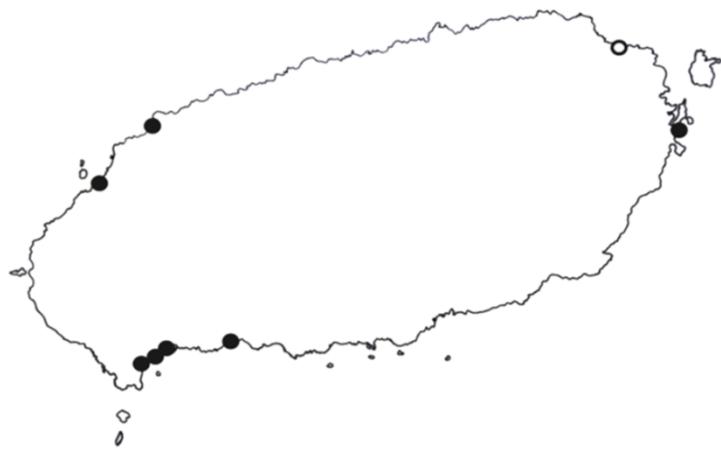

Fig. 78: Distribution of *A. maculosum*

## **Superfamily: Cardioidea Lamarck, 1809**

**Family: CARDIIDAE Lamarck, 1809**

**Subfamily: Cardiinae Lamarck, 1809**

**Genus: *Acrosterigma* Dall, 1900**

### **114 *Acrosterigma burchardi* (W. R. Dunker 1877)**

(Fig. 77) (Plate 3: K-N)

**ORIGINAL DESCRIPTION:** Dunker, W.1877. Mollusca nonnulla nova maris japonici. Malakozoologische Blätter, 24: 67. (As *Cardium burchardi* Dunker, 1877) (Without illustration)

**TYPE LOCALITY:** Sagami Bay, Japan

**HABITAT:** In sand, from intertidal zone to depth of 30m

**GENERAL DISTRIBUTION:** Korea and Japan; **JEJU:** Sehwa, Udo (Hagosudong), Udo (Sanhosa), Seongsan, Shinyang, Beophwan, Gangjeong, Jungmun, Yerae, Daepyeong, Hwasoon, Sagyei, Keumneung, Hyeopjae, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** *Acrosterigma* (*Vasticardium*) *burchardi* (Dunker, 1877); *Vasticardium burchardi* (Dunker, 1877) are synonyms.

### **115 *Acrosterigma maculosum* (Wood 1815)**

(Fig. 78) (Plate 3: G-J, O-P)

**ORIGINAL DESCRIPTION:** Wood, W. 1814-1815. General conchology; or, a description of shells, arranged according to the Linnaean system, and illustrated with plates, drawn and coloured from nature ...vol. 1 [all issued]. London (Booth), 218, pl. 52, figs. 1, 3. (As *Cardium maculosum* Wood, 1815)

**TYPE LOCALITY:** Unknown

**HABITAT:** Coral reefs, coarse sand and rubble, also fine sand, at depth of 5 – 106 m

**GENERAL DISTRIBUTION:** Korea and Japan to Indo-West Pacific; **JEJU:** Sehwa, Seongsan, Jungmun, Hwasoon, Yongmeori, Sagye, Hyeopjae, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** *A. arenicola* has been recognized as a valid species by virtually all Japanese authors (e.g. Okutani, 2000; Higo *et al.*, 1999). However Japanese specimens are similar to *Cardium maculosum* Wood, 1815, thus *arenicola* is a synonym of the earlier species. The Japanese specimens are typically larger end-of-range forms (Huber, 2010). *Acrosterigma* (*Vasticardium*) *arenicola* (Reeve, 1845), *Cardium arenicolum* Reeve, 1845 are regarded as synonyms.

**Genus: *Afrocardium* Tomlin, 1931**

**116 *Afrocardium richardi* (V. Audouin 1826)**

(Fig. 79) (Plate 3: Q-R)

**ORIGINAL DESCRIPTION:** Audouin, V. 1826. Explication sommaire des planches de Mollusques de l'Egypte et de Syrie publiees par J.C. Savigny. Description de l'Egypte ou recueil des observations et des recherches qui ont été faites en Egypte pendant l'expedition de l'armée fran aises, publie par les ordres de sa majeste l'empereur Napoleon le grand. *Histoire Naturelle, Animaux invert bres*, 1(4) 51. Imprimiere imperiale: Paris. (Illustration in Savigny, 1817; Pl. 9, fig. 14 (Holotype). (As *Cardium richardi* Audouin, 1826

**TYPE LOCALITY:** Egypt

**HABITAT:** Reefs, coarse sand, coral rubble, at depth of 2 – 140 m

**GENERAL DISTRIBUTION:** Japan to Indo-West Pacific; Mediterranean; **JEJU:** Seongsan, Shinyang, Hwasoon, Yongmeori, Sagye

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** *A. richardi* is quadrate to elongate and highly variable in color: white, red, yellow, purplish, and intermediate shades. *Afrocardium carditaeforme* (Reeve, 1845); *Cardium carditaeforme* Reeve, 1845 are synonyms.

**Subfamily: Laevicardiinae Keen, 1951**

**Genus: *Trifaricardium* Kuroda & Habe, 1951**

**117 *Trifaricardium nomurai* Kuroda and Habe, 1951**

(Fig. 80)

**ORIGINAL DESCRIPTION:** Kuroda, T. & T. Habe, 1951. Nomenclatorial notes. In: T. Kuroda, (ed.). Illustrated catalogue of Japanese shells 13:86, pl. 3 figs 9a-b (In Nomura, 1933: 81-82). (As *Trifaricardium nomurai* Kuroda and Habe, 1951)

**TYPE LOCALITY:** Unavailable

**HABITAT:** In mud and sand, at depth of 80 – 350 m

**GENERAL DISTRIBUTION:** Southern Japan to tropical West Pacific; **JEJU:** Hwasoon (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** The differences in shell morphology between Philippine and Japanese material appear slight, and can be regarded as falling within the range of intraspecific variation (Huber, 2010). New name for “*Cardium cancellatum* Nomura, 1933” non Gmelin, 1791 (*nom. dub.*).

**Genus: *Microcardium* Thiele, 1934**

**118 *Microcardium sakuraii* (Habe, 1961)**

(Fig. 80)

**ORIGINAL DESCRIPTION:** Habe, T., 1961. Four new bivalves from Japan. Venus 21 (2):152-156. (As *Nemocardium* (*Microcardium*) *sakuraii* Habe, 1961)

Fig. 79: Distribution of *A. richardi*

Fig. 80: Distribution of *T. nomurai* (●) and *Microcardium sakuraii* (■)

Fig. 81: Distribution of *N. australojaponicum*

**TYPE LOCALITY:** Shikoku, Japan

**HABITAT:** In sand at depth from 100 - 200 m

**GENERAL DISTRIBUTION:** Southern Korea and southern Japan to Tropical West Pacific;

**JEJU:** Hwasoon (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**Genus:** *Nemocardium* Thiele, 1934

**119 *Nemocardium australojaponicum* Ter Poorten, 2013**

(Fig. 81)

**ORIGINAL DESCRIPTION:** Poorten (T.), 2013 - Revision of the Recent species of the genus *Nemocardium* Meek, 1876 (Bivalvia, Cardiidae), with the descriptions of three new species. Basteria, t. 77, vol. 4-6, p. 59, 60, 62; figs. 24-27. (As *Nemocardium australojaponicum* Ter Poorten, 2013).

**TYPE LOCALITY:** Off Fukuoka, Kyushu, Japan

**HABITAT:** Mainly sandy substrate, at depth of 10-100 m

**GENERAL DISTRIBUTION:** Southern Korea and southern Japan; **JEJU:** Seogwipo, Beopwhan, Gangjeong (Choi, *et al.*, 2000)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** Juvenile “*bechei*” from Japan, Philippines, and Australia are quite similar and easily confused. However, adults show significant differences in shape, color, and periostracum. Fully adult Japanese specimens differ from those from the Philippines by having a particularly dark periostracum, rose instead of orange colors, and a comparatively high shape. They represent an undescribed species (Huber, 2010). *Nemocardium* (*Nemocardium*) *bechei* (Reeve, 1847) (Min *et al.*, 2004; Noseworthy *et al.*, 2007) is a synonym.

**Genus: *Fulvia* J. E. Gray, 1853**

**120 *Fulvia (Fulvia) mutica* (Reeve 1844)**

(Fig. 82)

**ORIGINAL DESCRIPTION:** Reeve, L.A., 1844. Conchologia Iconica 2. Monograph of the genus *Cardium*: sp. Pl. 6; fig 32; pl. 6, fig. 32. (As *Cardium muticum* Reeve, 1847)

**TYPE LOCALITY:** Unknown

**HABITAT:** In bays with sheltered waters and muddy substrate; at depth of 5 – 60 m

**GENERAL DISTRIBUTION:** Southern Japan and Korea to East China Sea; **JEJU:** Hamdeok, Shinyang, Gapado, Marado

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-low boreal

**REMARKS:** *Cardium japonicum* Dunker, 1860 is a synonym.

**121 *Fulvia (Laevifulvia) hungerfordi* (G. B. Sowerby III 1901)**

(Fig. 82)

**ORIGINAL DESCRIPTION:** Sowerby, G.B. III, 1901. Descriptions of five new species of shells. Journal of Malacology 8 (3):103, pl. 9, fig. 5. (As *Cardium (Papyridia) hungerfordi* Sowerby, 1901)

**TYPE LOCALITY:** Japan

**HABITAT:** Sheltered waters with organic mud substrate, from intertidal zone to depth of 75 m

**GENERAL DISTRIBUTION:** Southern Korea and Southern Japan to Indonesia; **JEJU:** Hwasoon (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** *Fulvia hungerfordi* (Sowerby III, 1901); *Cardium (Papyridia)* [error for *Papyridia*] *hungerfordi* G.B. Sowerby III, 1901 are synonyms.

**122 *Fulvia (Laevifulvia) undatopicta* (H. A. Pilsbry 1904)**

(Fig. 82)

**ORIGINAL DESCRIPTION:** Pilsbry, H.A., 1904. New Japanese Marine Mollusca: Pelecypoda. Proceedings of the Academy of Natural Sciences of Philadelphia 56: 556, pl. 40 figs 14-15. (As *Cardium hungerfordi undatopictum* Pilsbry, 1904)

**TYPE LOCALITY:** Western Kyushu, Japan

**HABITAT:** Coral reefs, calcareous and coarse sand, also in sandy mud, from depths of 2-120 m

**GENERAL DISTRIBUTION:** Korea and Japan to Tropical West Pacific; **JEJU:** Sagyei, Kwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Photos of live specimens (Okutani, 2000: 954-955) clearly show the large guard tentacles carrying ocular organs on their tips. (Ter Poorten, 2009). *Fulvia undatopicta* (Pilsbry, 1904) is a synonym.

**Superfamily: Chamoidea Lamarck, 1809**

**Family:** CHAMIDAE Lamarck, 1809

**Genus:** *Chama* Linnaeus, 1758

**123 *Chama dunkeri* Lischke, 1870**

(Fig. 83)

**ORIGINAL DESCRIPTION:** Lischke, C.E., 1870. Diagnosen neuer Meeres-Conchylien von Japan. Malakozoologische Blätter 17: 27. (As *Chama dunkeri* Lischke, 1870) (Without illustration)

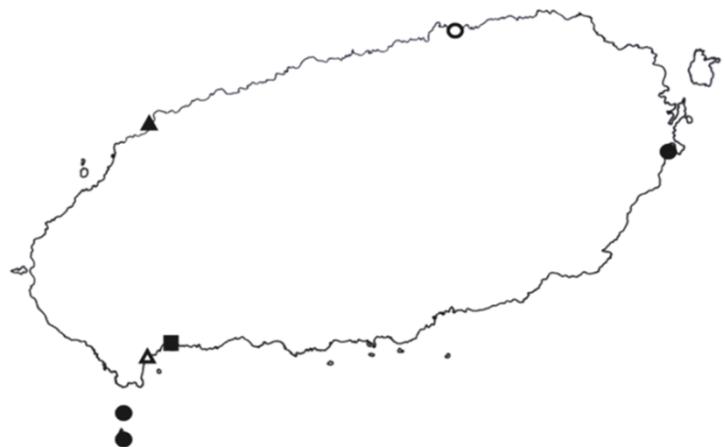

Fig. 82: Distribution of *F. mutica* (●), *F. hungerfordi* (■), and *F. undatopicta* (▲).

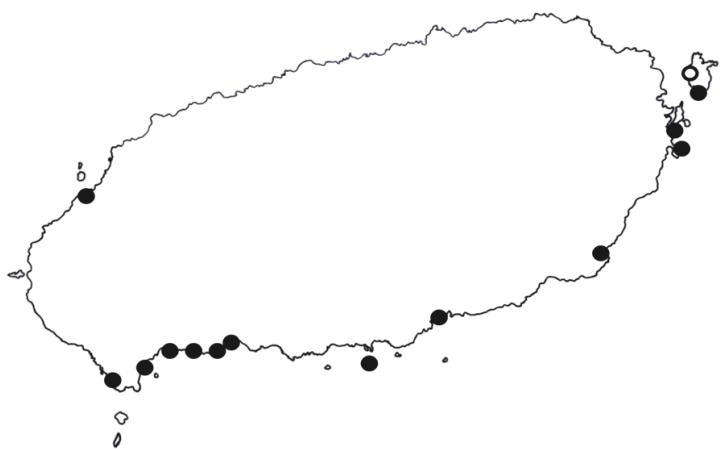

Fig. 83: Distribution of *C. dunkeri*

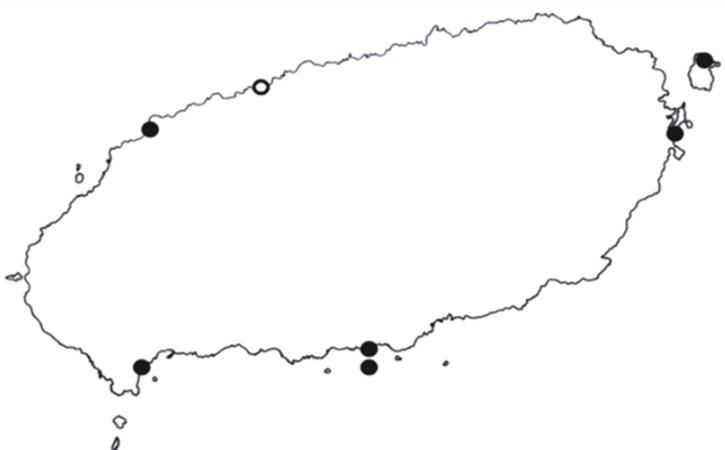

Fig. 84: Distribution of *C. asprella*

**TYPE LOCALITY:** Nagasaki, Kyushu, Japan

**HABITAT:** Attached with left valve to rocks at depth of 1-30 m

**GENERAL DISTRIBUTION:** Southern Korea and Japan to South China Sea; **JEJU:** Udo (Sanhosa), Udo (Geomeollae), Songsan, Seopjikoji, Pyoseon, Wimi, Munseom, Jungmun, Yerae, Daepyeong, Hwasoon, Sagyei, Hamo, Keumneung

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Okutani (2000) did not mention *C. dunkeri*. Shell may be reddish-white or reddish, with short spines. Internally specimens are white or only the dorsal border is colored.

#### 124 *Chama asperella* Lamarck, 1819

(Fig. 84)

**ORIGINAL DESCRIPTION:** Lamarck, J. P. B. A de Monet de 1819. Histoire naturelle des animaux sans vertèbres, présentant les caractères généraux et particuliers de ces animaux, leur distribution, leurs classes, leurs familles, leurs genres, et la citation des principales espèces qui s'y rapportent; précédée d'une introduction offrant la détermination des caractères essentiels de l'animal, sa distinction du végétal et des autres corps naturels, enfin, l'exposition des principes fondamentaux de la zoologie. Tome sixième. Ire. partie. Paris. 95. (As *Chama asperella* Lamarck, 1819) (Without illustration)

**TYPE LOCALITY:** “Les mers australes?” (Lamarck) (South Seas)

**HABITAT:** Cemented to rocks, corals, or shells, also in rock crevices, from the intertidal zone to a depth of 107 m

**GENERAL DISTRIBUTION:** Japan Indo-Pacific; South Africa; Mediterranean; Hawaii;

**JEJU:** Iho, Udo (Hagusodong), Seongsan, Seogwipo, Munseom, Sagyei, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** “The holotype of *Chama japonica* Lamarck, 1819 is in poor condition and

cannot be properly determined, hence the taxon must be understood as *nom. dub.* *Chama japonica* of Japanese authors non Lamarck, 1819 is *asperella*" (Huber, 2010).

### 125 *Chama cerinorhodon* Hamada & Matsukuma, 2005

(Fig. 85)

**ORIGINAL DESCRIPTION:** Hamada N. & Matsukuma A. 2005. A new species of Japanese *Chama* (Bivalvia: Heterodontida) with a calcitic outermost layer. *Venus*, 64(1-2): 11-21, figs. 1-4. (As *Chama cerinorhodon* Hamada & Matsukuma, 2005)

**TYPE LOCALITY:** Off Himeshima Islet ,Shima-machi, Itoshima-gun ,Fukuoka Prefecture ,Japan (Long .130° 03' 10" E, Lat. 33° 33' 30" N).

**HABITAT:** Cemented to hard substrate in the subtidal zone

**GENERAL DISTRIBUTION):** Southern Korea and Japan to East China Sea; **JEJU:** Iho, Wolpyeong, Haengwon, Handong, Hado, Udo (Sanhosa), Udo (Geomeollae), Seongsan, Seopjikoji, Shinyang, Bomok, Munseom, Seogundo, Gangjeong, Jungmun, Yerae, Hwasoon, Yongmeori, Sagyei, Hamo, Keumneung, Biyangdo, Hyeopjae, Gwakji, Gwideok

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Okutani (2000, p. 945) mentions that *Chama "fragum"* has an outermost shell layer consisting of calcite, and states that "true *C. fragum* has the shell solely consisting of aragonite." Huber (2010) states: "The type of Reeve's ... *fragum* is lost. What is present under "*fragum*" BMNH1995182 from unknown origin, even Caribbean is possible, does not conform to Reeve's species. Type material is missing and this species was differently interpreted by various authors; *C. fragum* Reeve, 1847 is here formally declared *nom.dub.*", hence Hamada and Matsukuma's description of *C. cerinorhodon*. *Chama fraga* Reeve, 1846 is a synonym.

**126 *Chama limbula* Lamarck, 1819**

(Fig. 86)

**ORIGINAL DESCRIPTION:** Lamarck, J. P. B. A de Monet de 1819. Histoire naturelle des animaux sans vertèbres, présentant les caractères généraux et particuliers de ces animaux, leur distribution, leurs classes, leurs familles, leurs genres, et la citation des principales espèces qui s'y rapportent; précédée d'une introduction offrant la détermination des caractères essentiels de l'animal, sa distinction du végétal et des autres corps naturels, enfin, l'exposition des principes fondamentaux de la zoologie. Tome sixième. Ire. Partie, Paris. p. 95. (As *Chama limbula* Lamarck, 1819) (Without illustration)

**TYPE LOCALITY:** Australia

**HABITAT:** Attached to stones in the subtidal zone

**GENERAL DISTRIBUTION:** Korea and S. E. Japan to Indo-Pacific; Hawaii; **JEJU:** Udo (Sanhosa), Seongsan, Shinyang, Pyoseon, Munseom, Jungmun, Hwasoon, Yongmeori, Sagyei, Keumneung

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** A rather heavy, quite large species, often encrusted, usually strongly furrowed, with smooth, purplish margins. Large, rather ovate, weakly furrowed, strong scaled forms may also occur; these may have whitish or yellowish-purple margins. *Chama iostoma* Conrad, 1837 is a synonym.

**Genus: *Pseudochama* Odhner, 1917**

**127 *Pseudochama retroversa* (Lischke, 1870)**

(Fig. 87)

**ORIGINAL DESCRIPTION:** Lamarck, J. P. B. A de Monet de 1819. Histoire naturelle des animaux sans vertèbres, présentant les caractères généraux et particuliers de ces animaux,

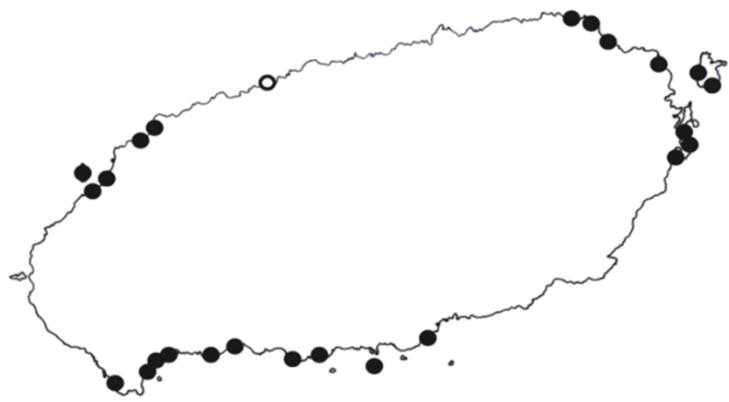

Fig. 85: Distribution of *C. cerinohodon*

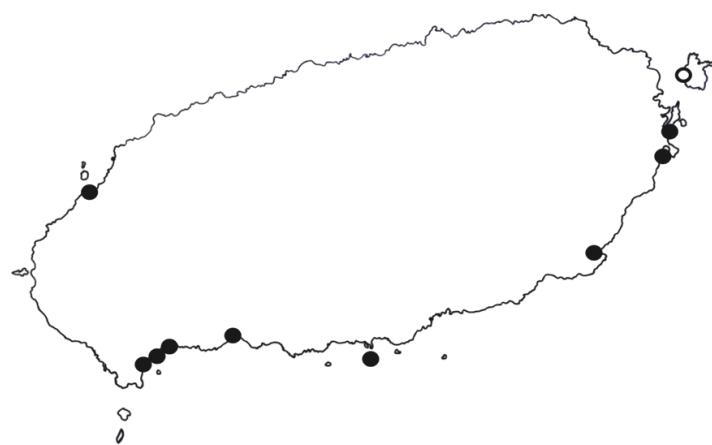

Fig. 86: Distribution of *C. limbula*

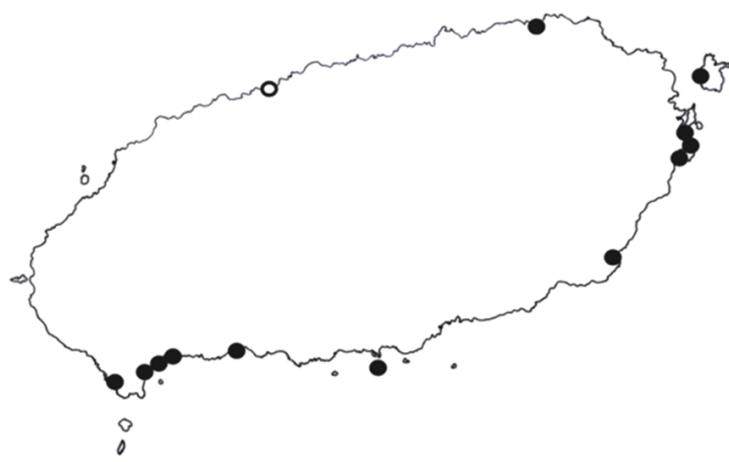

Fig. 87: Distribution of *P. retroversa*

leur distribution, leurs classes, leurs familles, leurs genres, et la citation des principales espèces qui s'y rapportent; précédée d'une introduction offrant la détermination des caractères essentiels de l'animal, sa distinction du végétal et des autres corps naturels, enfin, l'exposition des principes fondamentaux de la zoologie. Tome sixième. Ire. partie. Paris. 95. (As *Chama retroversa* Lischke, 1870) (Without illustration)

**TYPE LOCALITY:** Nagasaki, Kyushu, Japan

**HABITAT:** Cemented by right valve to rocks from the intertidal zone to depth of 20m

**GENERAL DISTRIBUTION:** East Sea to Taiwan; **JEJU:** Gimnyeong, Udo (Sanhosa), Seongsan, Seopjikoji, Shinyang, Pyoseon, Munseom, Jungmun, Hwasoon, Yongmeori, Sagyei, Hamo, Iho

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Species of *Pseudochama* are exclusively or largely attached by the right valve with the apex pointing to the left. *P. retroversa* has a very large ventral scar and a ventrally smooth margin.

**Genus: *Amphichama* Habe, 1964**

**128 *Amphichama argentata* (Kuroda and Habe, 1958)**

(Fig. 88)

**ORIGINAL DESCRIPTION:** Kuroda and Habe. 1958. Report on the Mollusca Chiefly Collected by the S. S. Soyo-Maru of the Imperial Fisheries Experimental Station on the Continental Shelf Bordering Japan During the Years 1922-1930. Part 4. Lamellibranchia (2). Publications of the Seto Marine Biological Laboratory 7(1): 31. (As *Chama argentata* Kuroda and Habe, 1958) (Without illustration)

**TYPE LOCALITY:** Tosa Bay, Shikoku, Japan

**HABITAT:** Cemented to rocks, pebbles, and corals by right or left valve at depths of 50-300

m

**GENERAL DISTRIBUTION:** Korea and Japan to Taiwan; **JEJU:** Supseom, Munseom, Keumneung, Biyangdo,

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** "This deep sea species is very characteristic in having a pearly shell on which distinct lamellae are placed distantly. The growth lines are lamellate but not fimbriate. The attachment area is by either by the left or right valves." (Kuroda and Habe, 1958)

### **Superfamily: Galeommatoidea Gray, i840**

**Family: GALEOMMATIDAE Gray, 1840**

**Genus: *Scintilla* Deshayes, 1856**

#### **129 *Scintilla violescens* Kuroda & Iw. Taki, 1961**

(Fig. 89)

**ORIGINAL DESCRIPTION:** Kuroda, T. and Taki, I. 1961. On a new species of *Scintilla* (Galeommatidae) from Japan. Venus 21: 141. (As *Scintilla violescens* Kuroda and I. W. Taki, 1961) (Without illustration)

**TYPE LOCALITY:** Shirahama, southern Kii Peninsula, central Japan

**HABITAT:** Attached to gorgonians, from middle intertidal zone to depth of 100 m

**GENERAL DISTRIBUTION:** Korea; Japan; East Sea, Thailand; **JEJU:** Pyoseon, Munseom, Hwasoon

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

#### **130 *Scintilla timoriensis* Deshayes, 1856**

(Fig. 89)

**ORIGINAL DESCRIPTION:** Deshayes G. P. 1856. Sur le genre *Scintilla*. Proceedings of

Fig. 88: Distribution of *A. argentata*

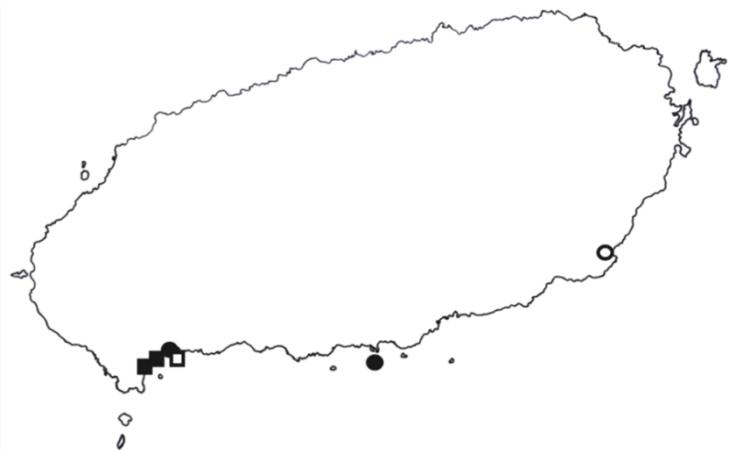

Fig. 89: Distribution of *S. violescens* (●) and *S. timoriensis* (■)

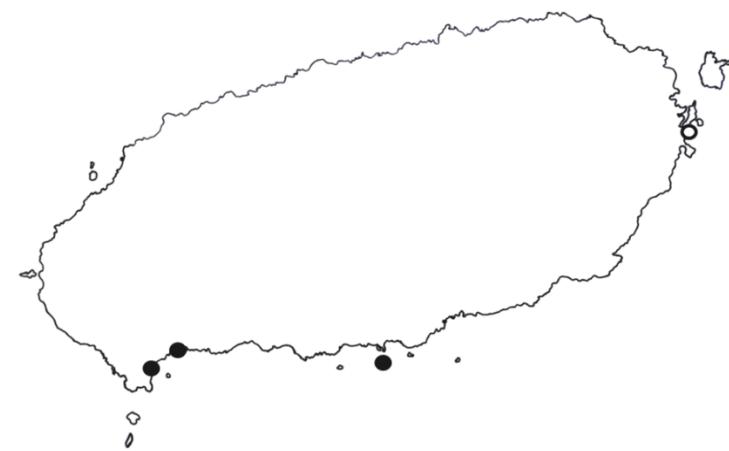

Fig. 90: Distribution of *S. niditella*

the Zoological Society of London 1855: 174. (As *Scintilla timoriensis* Deshayes, 1856)

(Without illustration)

**TYPE LOCALITY:** Timor Island

**HABITAT:** Under rocks just below intertidal zone

**GENERAL DISTRIBUTION:** Southern Korea and southern Japan to Indo-W. Pacific;

**JEJU:** Hwasoon, Yongmeori, Sagyei

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

### **131 *Scintilla nitidella* Habe, 1962**

(Fig. 90)

**ORIGINAL DESCRIPTION:** Habe T. 1962. Coloured illustrations of the shells of Japan, II, 2nd edn. Osaka: Hoikusha (in Japanese). p. 46, pl. 57, fig. 14. (As *Scintilla nitidella* Habe, 1962)

**TYPE LOCALITY:** Tanabe Bay, Wakayama Prefecture, Japan

**HABITAT:** Fine sand bottom, from intertidalzone to 20 m.

**GENERAL DISTRIBUTION:** Southern Korea and Japan; **JEJU:** Seongsan, Munseom, Hwasoon, Sagyei

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** (New name for *Scintilla vitrea* Habe, 1961 preoccupied by *Scintilla vitrea* Quoy and Gaimard, 1832)

### **Family: LASAEIDAE Gray, 1842**

(Kelliidae Forbes and Hanley, 1849 and Montacutidae W. Clark, 1855, often used in regional literature (eg. Min, 2004), are both synonyms of this family (Lutaenko and Noseworthy, 2012). “There is as yet insufficient information to divide this family into supported clades” (Bieler et al., 2010).

**Genus: *Lasaea* Brown, 1827**

**132 *Lasaea undulata* (Gould, 1861)**

(Fig. 91)

**ORIGINAL DESCRIPTION:** Gould, A.A. 1861 Description of shells collected by the North Pacific exploring expedition. Proceedings of the Boston Society of Natural History 8:34. (As *Kellia undulata* Gould, 1861) (Without illustration)

**TYPE LOCALITY:** Kagoshima, Kyushu, Japan

**HABITAT:** On rocks in intertidal zone

**GENERAL DISTRIBUTION:** Korea and Japan; **JEJU:** Udo (Sanhosa), Seongsan, Munseom. Hyeopjae. Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** One of the smallest bivalves found in Jeju Island.

**Genus: *Squillaconcha* Kuroda & Habe, 1971**

**133 *Squillaconcha subsinuata* (Lischke, 1871)**

(Fig. 91)

**ORIGINAL DESCRIPTION:** Lischke, C. E. 1871. Diagnosen neuer Meeres-Conchylien von Japan. Malakozoologische Blätter, xviii 1871: pp. 43, 44. (As *Kellia subsinuata* Lischke, 1871) (Without illustration)

**TYPE LOCALITY:** Unknown

**HABITAT:** Bysally attached to ventral side of *Squilla ornata* (Stomatopoda) in middle to lower intertidal zone.

**GENERAL DISTRIBUTION:** Korea and Japan; East Sea (Western area); **JEJU:** Handong, Hwasoon

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**Genus: *Melliteryx* Iredale, 1924**

**134 *Melliteryx puncticulata* (Yokoyama, 1924)**

(Fig. 91)

**ORIGINAL DESCRIPTION:** Yokoyama, M. 1924. Journal of the College of Science, Imperial University of Tokyo. Mollusca from the Coral-bed of Awa. Vol. 45, art. 1, pp. 48, 49, pl. IV, figs. 8, 8a, 9. (As *Lepton puncticulatum* Yokoyama, 1924)

**TYPE LOCALITY:** Numa, Chiba Prefecture, Japan

**HABITAT:** In sand, from depth of 5-50 m

**GENERAL DISTRIBUTION:** Southern Korea and Japan; **JEJU:** Hwasoon (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**Genus: *Kellia* Turton, 1822**

**135 *Kellia porculus* Pilsbry, 1904**

(Fig. 92)

**ORIGINAL DESCRIPTION:** Pilsbry. 1904, New Japanese Marine Mollusca: Pelecypoda. Proceedings of the Academy of Natural Sciences, Philadelphia 56: 558, pl. 41, fig. 18-20 (As *Kellia porculus* Pilsbry, 1904)

**TYPE LOCALITY:** Hirado, Hizen" (Nagasaki Prefecture, Kyushu, Japan)

**HABITAT:** Shelly gravel and sand bottom from intertidal zone to depth of 20 m

**GENERAL DISTRIBUTION:** Korea and Japan; **JEJU:** Iho, Hamdeok, Handong, Sehwa, Udo (Sanhosa), Jongdal-ri, Seongsan, Shinyang

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-lowboreal

**REMARKS:** May be a thickened form of *K. japonica* Pilsbry, 1895; the former possesses

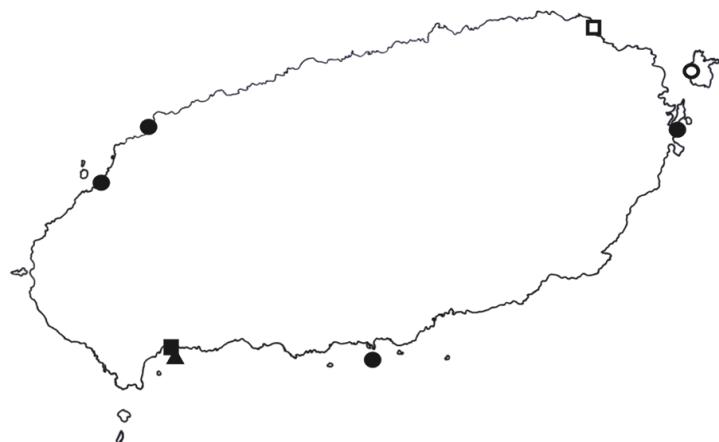

Fig. 91: Distribution of *L. undulata* (●), *Squillaconcha subsinuata* (■), and *Melliteryx puncticulata* (▲)

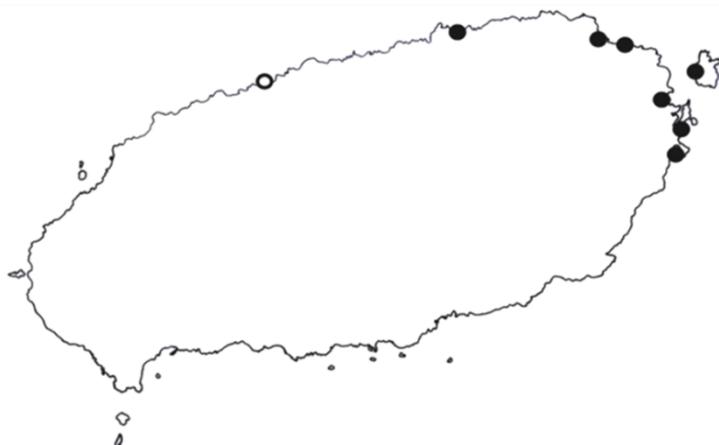

Fig. 92: Distribution of *K. porculus*

Fig. 93: Distribution of *Nesobornia bulla*

much heavier teeth and a thicker, more inflated shell (Lutaenko and Noseworthy, 2012).

**Genus: *Nesobornia* Dall, Bartsch & Rehder, 1938**

**136 *Nesobornia bulla* (Gould, 1861)**

(Fig. 93)

**ORIGINAL DESCRIPTION:** Gould, A.A. 1861 Description of shells collected by the North Pacific exploring expedition. Proceedings of the Boston Society of Natural History 8: 34, (As *Kellia bulla* Gould, 1861) (Without illustration)

**TYPE LOCALITY:** Ryukyu Islands, Japan

**HABITAT:** In sand and mud at depths of 50-100 m

**GENERAL DISTRIBUTION:** Korea and Southern Japan; **JEJU:** Udo (Sanhosa), Yongmeori, Sagyei, Keumneung

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-low boreal

**REMARKS:** There is some confusion concerning the family to which this species belongs. It has been placed in the Kelliidae (Bouchet, 2015) and also the Lasaeidae (Okutani, 2000). Some authors have regarded Kelliidae as a synonym of Lasaeidae (Lutaenko & Noseworthy, 2012).

**Genus: *Pseudopythina* P. Fischer, 1878**

**137 *Pseudopythina tsurumaru* (Habe, 1959)**

(Fig. 94)

**ORIGINAL DESCRIPTION:** Habe, T., 1959. Five new minute bivalves from Japan (Erycinacea, Pelecypoda). *Publ. Seto Mar. Biol. Lab.*, 7(2): 292, text figs. 10-12. (As : *Borniopsis tsurumaru* Habe, 1959)

**TYPE LOCALITY:** Ariake Sea, Kyushu

**HABITAT:** In mud and sand at depths of 10-50 m

**GENERAL DISTRIBUTION:** Southern Korea and Japan; **JEJU:** Munseom, Hwasoon

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**Genus: *Nipponomyssella* Yamamoto & Habe, 1959**

**138 *Nipponomyssella oblongata* (Yokoyama, 1922)**

(Fig. 94)

**ORIGINAL DESCRIPTION:** Yokoyama, M., 1922: Fossils from the upper Musashino of Kazusa and Shimosa. Journal of the College of Science, Imperial University of Tokyo, vol. 44, art. 1, p. 157, pl. 13, figs. 9, 10. (As *Montacuta oblongata* Yokoyama, 1922)

**TYPE LOCALITY:** "Shito" (Boso Peninsula), "Oji" (Tokyo), Japan (fossil)

**HABITAT:** Commensal on ophiuroids in sandy mud from lower intertidal zone to depth of 14 m.

**GENERAL DISTRIBUTION:** Korea and Japan (Check); **JEJU:** Hwasoon (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**Superfamily: Glossoidea Gray, 1847**

**Family: GLOSSIDAE Gray, 1847**

**Genus: *Meiocardia* H. Adams & A. Adams, 1857**

**139 *Meiocardia hawaiana* Dall, Bartsch, and Rehder, 1938**

(Fig. 95)

**ORIGINAL DESCRIPTION:** Dall, W. H., Bartsch, P., and Rehder, H. A., 1938. A Manual of the Recent Pelecypod Mollusks of the Hawaiian Islands. Bernice P. Bishop Museum Bulletin, (153): 1-233, 58 pl. (As *Meiocardia hawaiana* Dall, Bartsch, and Rehder, 1938)

**TYPE LOCALITY:** Kauai, Hawaii

**HABITAT:** On sand and mud bottoms, also gravelly bottom with corals, at depth from 30-600 m

**GENERAL DISTRIBUTION:** Korea and Japan to SE. Asia; Hawaii; Indian Ocean (Reunion); **JEJU:** Hwasoon (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**Family: KELLIELLIDAE P. Fischer, 1887**

**Genus: *Alveinus* Conrad, 1865**

**140 *Alveinus ojianus* (Yokoyama, 1927)**

(Fig. 95)

**ORIGINAL DESCRIPTION:** Yokoyama, M. 1927. Mollusca from the Upper Musashino of Western Shimosa and Southern Musaski. Journal of the Faculty of Science, University of Tokyo. 1: 432, pl. 50, figs, 7, 8. (Holotype and paratype: Taki, Is. and Oyama, K. 1954. Matajiro Yokoyama's "The Pliocene and Later Faunas from The Kwanto Region in Japan". Palaeontological Society of Japan. Special Papers Number 2, pl. 47, figs, 7, 8) (As *Kellia* (?) *ojiana* Yokoyama, 1927)

**TYPE LOCALITY:** Unknown

**HABITAT:** Sandy mud and fine sand, byssally attached to sand grains; at depth of 2-150 m

**GENERAL DISTRIBUTION:** Sea of Okhotsk to Thailand; **JEJU:** Seongsan (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-lowboreal

**Superfamily: Mactroidea Lamarck, 1809**

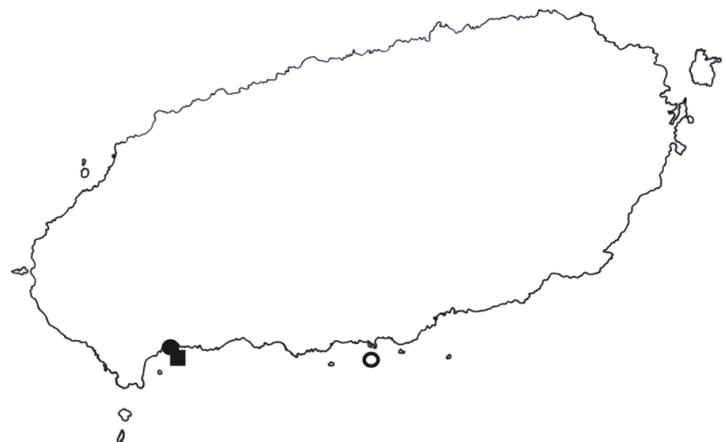

Fig. 94: Distribution of *P. tsurumaru* (●) and *Nipponomysella oblongata* (■)

Fig. 95: Distribution of *M. hawaiana* (●) and *Alveinus ojianus* (■)

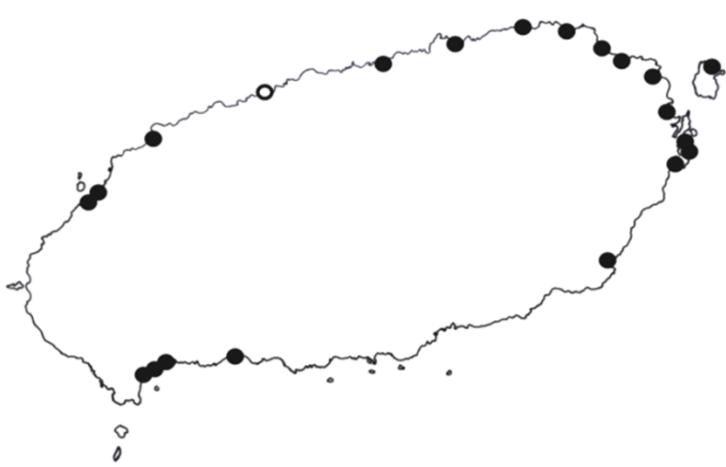

Fig. 96: Distribution of *M. chinensis*

**Family: MACTRIDAE Lamarck, 1809**

**Subfamily: Mactrinae Lamarck, 1809**

**Genus: *Mactra* Linnaeus, 1767**

**141 *Mactra (Mactra) chinensis* Philippi, 1846**

(Fig. 96)

**ORIGINAL DESCRIPTION:** Philippi, R. A. 1846. *Mactra* Tab. II. In Abbildungen und Beschreibungen neuer oder wenig bekannter Conchylien, Cassel (Theodor Fischer). 1847, 2: 73, Pl. II, fig. 1. (As *Mactra chinensis* Philippi, 1846)

**TYPE LOCALITY:** China

**HABITAT:** Burrowed in sand and mud; in bays, from intertidal zone to depth of 30 m

**GENERAL DISTRIBUTION:** Sea of Okhotsk to South China Sea; **JEJU:** Iho, Samyang, Hamdeok, Gimnyeong, Wolpyeong, Handong, Sehwa, Hado, Udo (Hagosudong), Jongdal-ri, Seongsan, Seopjikoji, Shinyang, Pyoseon, Jungmun, Hwasoon, Yongmeori, Sagyei, Keumneung, Hyeopjae, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-lowboreal

**REMARKS:** There appear to be two forms, a northern one which is more triangular (Eastern Russia) and a southern one (Korea) which is more rounded.

**142 *Mactra (Mactra) achatina* "Chemnitz" Holten, 1802**

(Fig. 97) (Plate 7: C, D)

**ORIGINAL DESCRIPTION:** Holten, H. S. 1802. *Enumeratio systematica conchyliorum J. H. Chemnitzii.* - pp. I-VI [= 1-6], 1-88. Havniæ. (As *Mactra achatina* Holten, 1802)

**TYPE LOCALITY:** Unknown

**HABITAT:** Shelly and fine sand, ar depth of 5-60 m

**GENERAL DISTRIBUTION:** Southern Korea and Japan to Indo-West Pacific; **JEJU:**

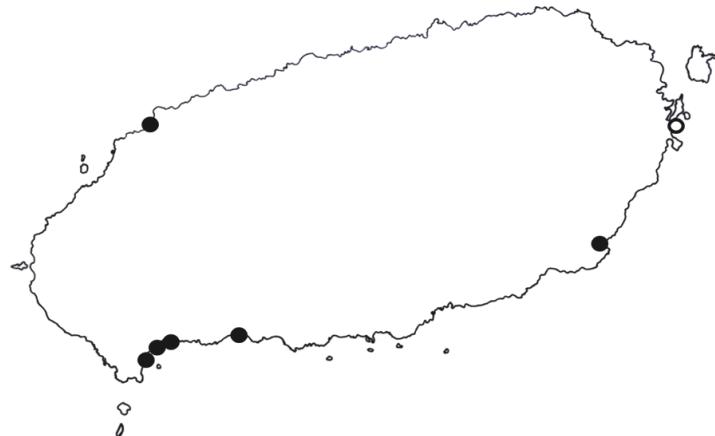

Fig. 97: Distribution of *M. achatina*

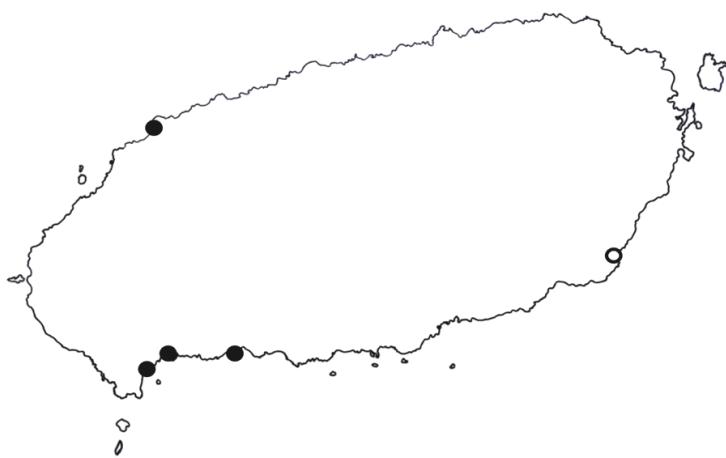

Fig. 98: Distribution of *M. iridesbens*

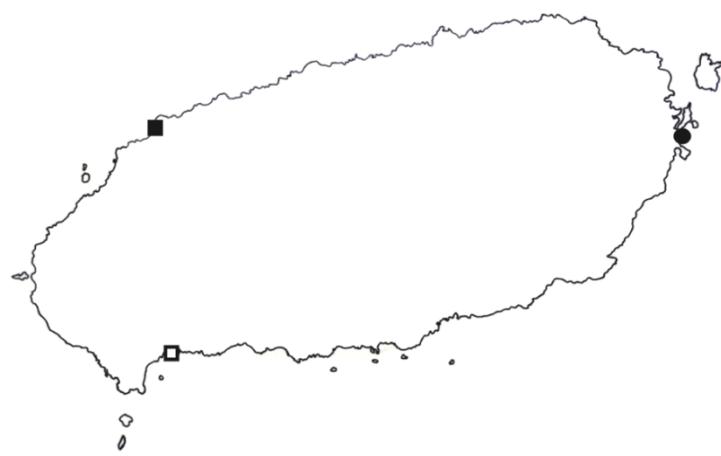

Fig. 99: Distribution of *O. bernardi* (●) and *Lutraria maxima* (■)

Seongsan, Pyoseon, Jungmun, Hwasoon, Yongmeori, Sagye, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Specimens of *M. ornata* from the Indo-West Pacific are similar to *M. achatina*, the oldest name being *achatina* (Huber, 2010). *Mactra ornata* Gray, 1837 is a synonym

**143 *Mactra (Mactra) iridescens* Kuroda & Habe in Habe, 1958**

(Fig. 98)

**ORIGINAL DESCRIPTION:** Habe, T. 1958. Report on the Mollusca chiefly collected by the S. S. Soyo-Maru of the Imperial Fisheries Experimental Station on the continental shelf bordering Japan during the years 1922-1930. Part 4. Lamellibranchia (2). Seto Marine Biological Laboratory, Publications [Kyoto University]. 7(1) 48. (As *Mactra iridescens* Kuroda and Habe in Habe, 1958) (Without illustration)

**TYPE LOCALITY:** Off Yakushima, Kyushu, Japan

**HABITAT:** Fine sand, at depth of 20 - 250 m

**GENERAL DISTRIBUTION:** Korea and Southern Japan to East China Sea; **JEJU:** Pyoseon, Jungmun, Hwasoon, Sagyei, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** *Mactra (Telemactra) iridescens* Kuroda and Habe in Habe, 1958 is a synonym.

**Genus: *Oxyperas* Mörch, 1853**

**144 *Oxyperas bernardi* (Pilsbry, 1904)**

(Fig. 99)

**ORIGINAL DESCRIPTION:** Pilsbry, H.A., 1904. New Japanese Marine Mollusca: Pelecypoda. Proceedings of the Academy of Natural Sciences of Philadelphia 56: 550-551, pl. 39, figs. 4-6. (As *Spisula (Oxyperas) bernardi* Pilsbry, 1904

**TYPE LOCALITY:** Awaji Island, Hyōgo Prefecture, Japan

**HABITAT:** Coarse and shelly sand, at depth of 6-100 m

**GENERAL DISTRIBUTION:** East Sea to Taiwan; **JEJU:** Seongsan (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-lowboreal

**REMARKS:** The genus *Oxyperas* currently encompasses uncommon, comparatively large, elongated species with striated lateral teeth and commarginal ribbing of varying strength (Huber, 2010).

**Subfamily: Lutrariinae Gray, 1853**

**Genus: *Lutraria* Lamarck, 1799**

**145 *Lutraria (Lutraria) maxima* J. H. Jonas, 1844**

(Fig. 99) (Plate 7: A, B)

**ORIGINAL DESCRIPTION:** Jonas, J. H. (1844). Vorlaufige diagnosen neuer conchylien, welvhe ausfuhrlicher beschrieben und abgebildet nachstens erscheinen werden . Zeitschrift fur Malakozoologie. 1844: 34. (As *Lutraria maxima* Jonas, 1844) (Without illustration)

**TYPE LOCALITY:** Unknown

**HABITAT:** Deeply burrowed in fine sand and mud, from intertidal zone to depth of 14 m

**GENERAL DISTRIBUTION:** Japan to South China Sea; **JEJU:** Hwasoon, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** *Lutraria (Psammophila) maxima* Jonas, 1844 is a synonym,

**Family: MESODESMATIDAE Gray, 1840**

**Subfamily: Mesodesmatinae Gray, 1840**

**Genus: *Coecella* Gray, 1853**

**146 *Coecella chinensis* Deshayes, 1855**

(Fig. 100)

**ORIGINAL DESCRIPTION:** Deshayes, G. P., 1855, Descriptions of new shells from the collection of Hugh Cuming, Esq. *Proceedings of the Zoological Society of London*, 23: 334.  
(As *Caecella chinensis* Deshayes, 1855 [*Caecella* H. & A. Adams, 1856 is an error.])  
(Without illustration)

**TYPE LOCALITY:** Chinese Seas

**HABITAT:** Cobble beaches, coarse sand and stones, also muddy sand in intertidal zone

**GENERAL DISTRIBUTION:** East Sea to South China Sea; **JEJU:** Iho, Hamdeok, Gimnyeong, Haengwon, Handong, Sehwa, Jongdal-ri, Ojo-ri, Seongsan, Shinyang, Pyoseon, Hwasoon, Sagyei, Yongnak, Keumneung, Hyeopjae

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Locally common; edible. Dead specimens frequently found on beaches; often obtained live in sandy bottoms in tidepools.

### **Superfamily: Sphaerioidae Deshayes, 1855**

**Family: SPHAERIIDAE Deshayes, 1855**

**Subfamily: Sphaeriinae Deshayes, 1854 (**

**Genus: *Sphaerium* Scopoli, 1777**

#### **147 *Sphaerium japonicum* (Westerlund, 1883)**

(Fig. 101)

**ORIGINAL DESCRIPTION:** Westerlund C.A., 1883. Von der Vega-Expedition in Asien gesammelte Binnenmollusken. *Nachrichtsblatt der Deutschen Malacozoologischen Gesellschaft*, 15: 58. (As *Calculina japonica* Westerlund, 1883) (Without illustration)

**TYPE LOCALITY:** Yokogava (Yokogawa), Honshu, Japan

**HABITAT:** In mud among the roots of aquatic plants, usually in stagnant pools or small,

slow-flowing streams

**GENERAL DISTRIBUTION:** Korea and Japan; **JEJU:** Seogwipo (edible aquatic plant (minaree) fields), Gangjeong (muddy stream)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-low boreal

**REMARKS:** First freshwater bivalve species record for Jeju Island. *Sphaerium lacustre japonicum* (Westerlund, 1883); *Sphaerium (Musculium) japonicum* (Westerlund, 1883); *Musculium japonicum* (Westerlund, 1883) are synonyms.

## **Superfamily Tellinoidea Blainville, 1814**

### **Family: TELLINIDAE Blainville, 1814**

#### **Subfamily: Tellininae Blainville, 1814**

##### **Genus: *Pharaonella* Lamy, 1918**

###### **148 *Pharaonella sieboldii* (Deshayes, 1855)**

(Fig. 102) (Plate 9: E, F)

**ORIGINAL DESCRIPTION:** Deshayes, G. P., 1855, Descriptions of new shells from the collection of Hugh Cuming, Esq. *Proceedings of the Zoological Society of London*, 23: 368. (As *Tellina sieboldii* Deshayes, 1855) (Without illustration)

**TYPE LOCALITY:** Japan

**HABITAT:** Fine sand, in lower intertidal zone to depth of 20 m

**GENERAL DISTRIBUTION:** Southern Korea and Japan; **JEJU:** Hado, Seongsan Pyoseon, Jungmun, Hwasoon, Sagyei, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

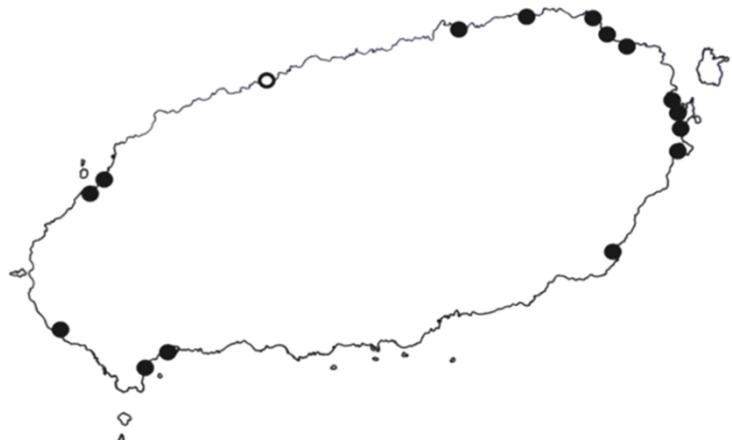

Fig. 100: Distribution of *C. chinensis*

Fig. 101: Distribution of *S. japonicum*

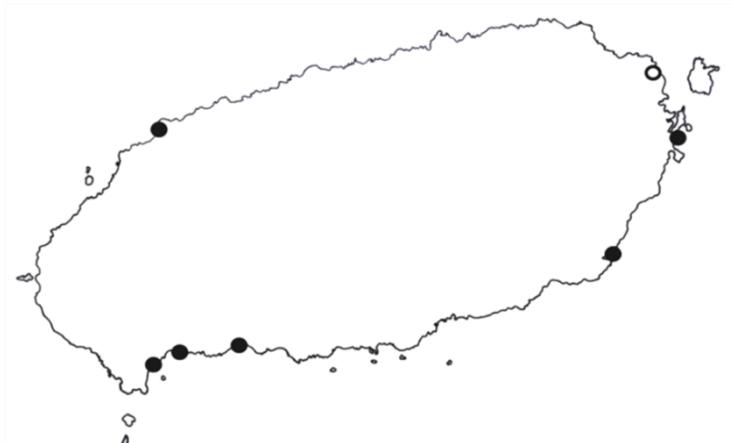

Fig. 102: Distribution of *P. sieboldi*

**Genus: *Pristipagia* Iredale, 1936**

**149 *Pristipagia subtruncata* (Hanley, 1844)**

(Fig. 103) (Plate 9: K, L)

**ORIGINAL DESCRIPTION:** Hanley S. C. T. (1844-1845). Descriptions of new species of the genus *Tellina* chiefly collected by H. Cuming Esq. in the Philippine Islands and Central America. *Proceedings of the Zoological Society of London*, 12 (139): 147-149 [December, 1844], 149. (As *Tellina subtruncata* Hanley, 1844) (Without illustration)

**TYPE LOCALITY:** Bohol, Philippines

**HABITAT:** Fine sand bottom at depth of 10-300 m

**GENERAL DISTRIBUTION:** Southern Korea and Japan; **JEJU:** Supseom, Hwasoon, Yeongmeori

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** *Merisca (Pistris) subtruncata* (Hanley, 1844); *Pistris subtruncata* (Hanley, 1844) are synonyms.

**Genus: *Cadella* Dall, Bartsch & Rehder, 1938**

**150 *Cadella narutoensis* Habe, 1960**

(Fig. 104) (Plate 9: Q, R)

**ORIGINAL DESCRIPTION:** Habe, T. 1960. New species of molluscs from the Amakusa Marine Biological Laboratory, Reihoku-cho, Amakusa, Kumamoto Pref., Japan. Publications of the Seto Marine Biological Laboratory 8(2): 292, 293, p. 294, fig. 1. (As *Cadella narutoensis* Habe, 1960)

**TYPE LOCALITY:** Naruto, Honshu, Japan

**HABITAT:** Sand bottom at depth of 10-100m

**GENERAL DISTRIBUTION:** Southern Korea and Japan; **JEJU:** Jungmun, Hwasoon,

Fig. 103: Distribution of *P. subtruncata*

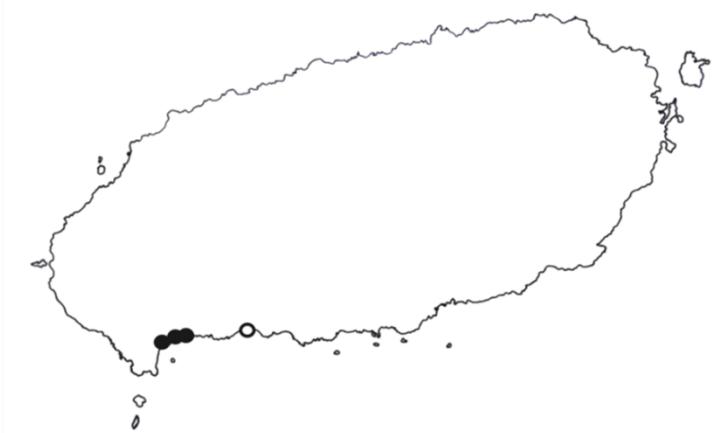

Fig. 104: Distribution of *C. naurotensis*

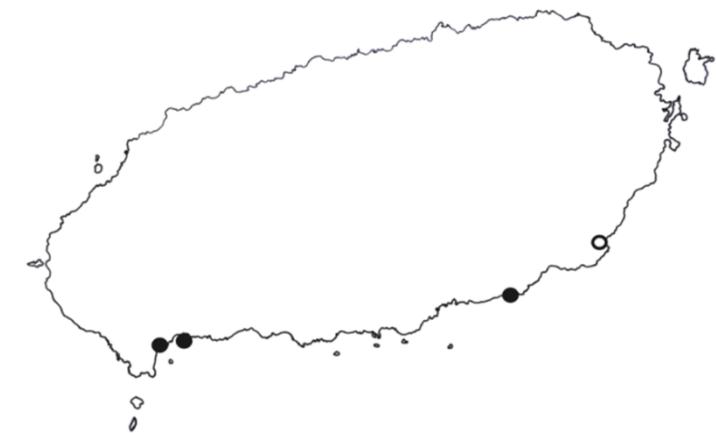

Fig. 105: Distribution of *C. delta*

Yongmeori, Sagyei

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**151 *Cadella delta* (Yokoyama, 1922)**

(Fig. 105)

**ORIGINAL DESCRIPTION:** Yokoyama, M. (1922) Fossils from the Upper Musashino of Kazusa and Shimosa. Journal of the College of Science, Tokyo Imperial University, 44, 141, pl. 1, figs. 8-10. (As *Tellina delta* Yokoyama, 1922)

**TYPE LOCALITY:** Kazusa Province (Chiba Prefecture), Honshu, Japan (fossil)

**HABITAT:** Sand bottom at depth of 5-160 m

**GENERAL DISTRIBUTION:** Southern Korea and Japan; **JEJU:** Pyoseon, Bomok, Hwasoon, Sagyei

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** Okutani (2000) mentions that this species is also found in the western part of the East Sea. However, Lutaenko and Noseworthy (2012) omit this species from their catalogue of continental East Sea bivalve species.

**Genus: *Jactellina* Iredale, 1929**

**152 *Jactellina clathrata* (Deshayes, 1835)**

(Fig. 106) (Plate 9: M-P)

**ORIGINAL DESCRIPTION:** Deshayes, G. P. 1835–1845. [in] J. B. Lamarck, Histoire Naturelle des Animaux sans Vertèbres, ou tableau général des classes, des ordres et des genres de ces animaux (deuxième édition). Tome 6–11. Histoire des mollusques. J.B. Ballière, París. 208, 209. (As *Tellina clathrata* Deshayes, 1835) (Without illustration)

**TYPE LOCALITY:** Unknown

**HABITAT:** Fine sand bottom in lower intertidal zone to depth of 30 m

**GENERAL DISTRIBUTION:** Southern Korea and Japan to Indo-Pacific; **JEJU:** Gimnyeong, Seongsan, Pyoseon, Bomok, Jungmun, Hwasoon, Yongmeori, Sagyei, Hyeopjae, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** There appears to be some confusion over the status of the genera *Jactellina* Iredale, 1929 and *Loxoglypta* Dall, Bartsch, and Rehder, 1938, as well as the species names *clathrata* Deshayes, 1835 and *lauta* Gould, 1850. According to Huber (pers. comm.), *Loxoglypta* is treated as a synonym of *Jactellina*, and *lauta* cannot be separated from *clathrata*, the older taxon. Thus, *Jactellina lauta* (Gould, 1850) and *Loxoglypta lauta* (Gould, 1850) are synonyms.

**Genus: *Herouvalia* Cossmann, in Harris & Burrows, 1891**

**153 *Herouvalia caelata* (A. Adams, 1854)**

(Fig. 106)

**ORIGINAL DESCRIPTION:** Adams, A. 1854. Descriptions of new shells from the collection of H. Cuming, Esq. Proceedings of the Zoological Society of London 21: 69. (*As Gafrarium caelatum* A. Adams, 1854) (Without illustration)

**TYPE LOCALITY:** Sorsogon, Luzon, Philippines

**HABITAT:** Sand bottom in lower intertidal zone to depth of 300 m

**GENERAL DISTRIBUTION:** Southern Korea and Southern Japan to Indian Ocean; **JEJU:** Hwasoon (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** *Elliptotellina euglypta* (Gould, 1861) is a synonym.

**Genus: *Tellina* Linnaeus, 1758**

**154 *Tellina iridella* Martens, 1865**

(Fig. 107)

**ORIGINAL DESCRIPTION:** Von Martens. 1865. Descriptions of New Species of Shells. Annals and Magazine of Natural History, Vol. 16, Ser. 3, London: Taylor and Francis. 431. (As *Tellina iridella* Martens, 1865) (Without illustration)

Iredale, 1929 and *Loxoglypta* Dall, Bartsch, and Rehder, 1938, as well as the species names *clathrata* Deshayes, 1835 and *lauta* Gould, 1850. According to Huber (pers. comm.), *Loxoglypta* is treated as a synonym of *Jactellina*, and *lauta* cannot be separated from

**GENERAL DISTRIBUTION:** Southern Korea and Japan to Taiwan; **JEJU:** Hado, Udo (Hagosudong), Seongsan, Shinyang, Jungmun, Hwasoon, Sagyei, Keumneung, Hyeopjae, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** *Nitidotellina iridella* (Martens, 1865) is a synonym.

**Subfamily: Macominae Olsson, 1961**

**Genus: *Heteromacoma* Habe, 1952**

**155 *Heteromacoma irus* (Hanley, 1845)**

(Fig. 108) (Plate 9: (A-D; G-J)

**ORIGINAL DESCRIPTION:** Hanley S. C. T. (1844-1845). Descriptions of new species of the genus *Tellina* chiefly collected by H. Cuming Esq. in the Philippine Islands and Central America. *Proceedings of the Zoological Society of London*, 12 (134): 164-166 [February, 1845], 166. (As *Tellina irus* Hanley, 1845) (Without illustration – see Hanley, 1846, pl lx (60), fig. 145)

**TYPE LOCALITY:** Unknown

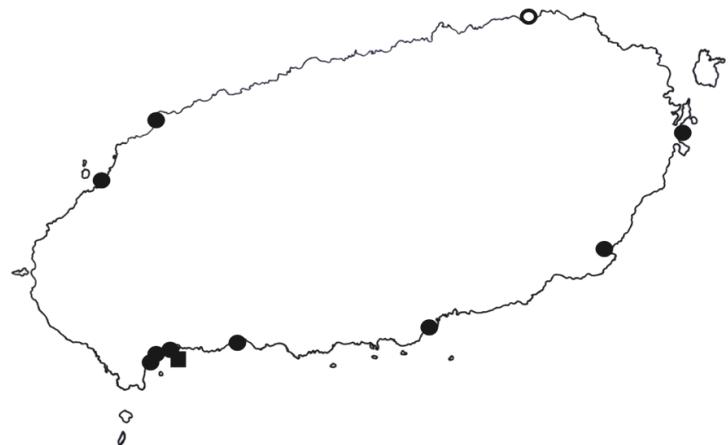

Fig. 106: Distribution of *J. clathrata* (●) and *Herouvalia caelata* (■)

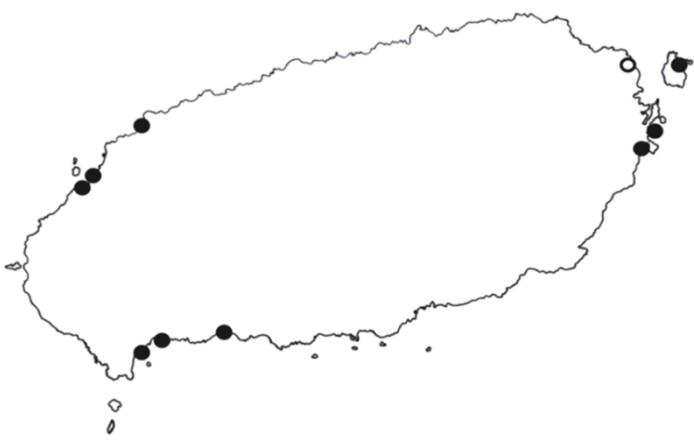

Fig. 107: Distribution of *T. iridella*

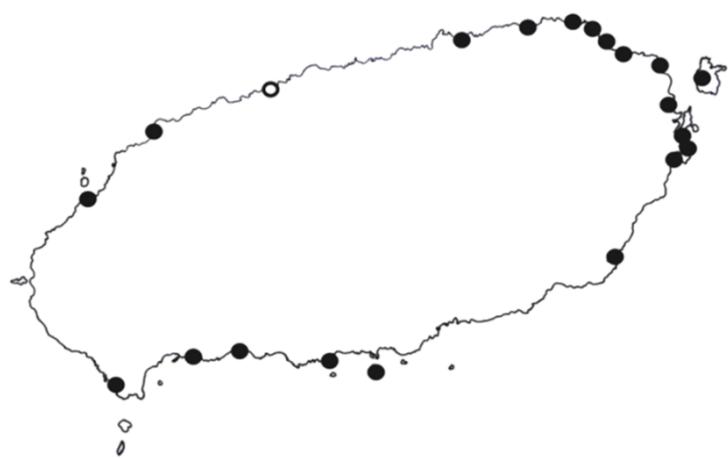

Fig. 108: Distribution of *H. irus*

**HABITAT:** Sandy-mud bottom with pebbles in intertidal zone

**GENERAL DISTRIBUTION:** Korea; Japan; China; **JEJU:** Iho, Hamdeok, Gimnyeong, Wolpyeong, Haengwon, Handong, Sehwa, Hado, Udo (Sanhosa), Jongdal-ri, Supjikoji, Seongsan, Shinyang, Pyoseon, Munseom, Seogundo, Jungmun, Daepyeong, Hamo, Keumneung, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** Locally harvested for food. The annual reproductive cycle of *H. irus* was investigated for the first time by Limpanont *et al.* (2011) from the northern coast of Jeju Island.

**Family: DONACIDAE J. Fleming, 1828**

**Genus: Donax Linnaeus, 1758**

**156 *Donax cuneatus* Linnaeus, 1758**

(Fig. 109)

**ORIGINAL DESCRIPTION:** Linnæus, C. 1758. *Systema naturæ per regna tria naturæ, secundum classes, ordines, genera, species, cum characteribus, differentiis, synonymis, locis. Tomus I. Editio decima, reformata. Holmiæ. (Salvius), 683. (As *Donax cuneatus* Linnaeus, 1758) (Without illustration)*

**TYPE LOCALITY:** Unknown

**GENERAL DISTRIBUTION:** Southern Korea and Japan to Indo-West Pacific; **JEJU:** Hwasoon (See Fig. 109)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** New species record for Jeju Island. As far as can be ascertained, this species has not been previously recorded from the Korean mainland, so it may be also considered as

a new species record for the country. *Latona cuneata* (Linnaeus, 1758); *Donax* (*Latona*) *cuneatus* (Linnaeus, 1758) are synonyms.

**Family: PSAMMOBIIDAE J. Fleming, 1828**

**Genus: *Heteroglypta* Martens in Möbius, 1880**

**157 *Heteroglypta contraria* (Deshayes in Maillard 1863)**

(Fig. 109)

**ORIGINAL DESCRIPTION:** Deshayes G. P. 1863. Catalogue des mollusques de l'Île de la Réunion (Bourbon). Annexes E, in Maillard L. (ed.), *Notes sur l'Île de la Réunion (Bourbon)*. Dentu, Paris, p. 11, pl. 1, fig. 20, 21. (As *Psammobia contraria* Deshayes in Maillard, 1863)

**TYPE LOCALITY:** Reunion

**HABITAT:** Shallowly buried in sand or nestling among coral rubble, also in coarse sand, from the intertidal zone to depth of 35m

**GENERAL DISTRIBUTION:** Southern Korea and Japan to Indo-West Pacific; **JEJU:** Sagyei (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**Genus: *Hiatula* Modeer, 1793**

**158 *Hiatula atrata* L. A. Reeve, 1857**

(Fig. 110) (Plate 8: A-F)

**ORIGINAL DESCRIPTION:** Reeve, L. A. 1857: Monograph of the genus *Soletellina*. Conchologia Iconica; or, illustrations of the shells of molluscous animals, vol. 10. London, L. A. Reeve. Pl. 3; fig 14. (As *Soletellina atrata* L. A. Reeve, 1857)

**TYPE LOCALITY:** Luzon, Philippines

**HABITAT:** Deeply burrowed in fine sandy mud and clean sand, at depth of 5-100 m

**GENERAL DISTRIBUTION:** East Sea to South China Sea; **JEJU:** Gimnyeong, Udo (Hagosudong), Jungmun, Hwasoon, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Matsubara (2013), after a careful examination of the original description of *Hiatula*, and the type species of *Soletellina* and *Hiatula*, has concluded that *Hiatula* and *Soletellina* are objective synonyms and the senior name *Hiatula* must be used.

**159 *Hiatula boeddinghausi* Lischke, 1870**

(Fig. 110)

**ORIGINAL DESCRIPTION:** Lischke, C. E. 1870 Diagnosen neuer Meeres-Conchylien von Japan. Malakozoologische Blatter, 17: 26, 27. (As *Soletellina boeddinghausi* Lischke, 1870) (Without illustration)

**TYPE LOCALITY:** Nagasaki, Japan

**HABITAT:** Sandflats; deeply buried in clean fine sand from intertidal zone to depth of 50 m

**GENERAL DISTRIBUTION:** Southern Korea and Japan; **JEJU:** Hyeopjae

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** New species record for Jeju Island.

**Genus: Nuttallia**

**160 *Nuttallia japonica* (L. A. Reeve 1857)**

(Fig. 111)

**ORIGINAL DESCRIPTION:** Reeve, L. A. 1857: Monograph of the genus *Soletellina*. Conchologia Iconica; or, illustrations of the shells of molluscous animals, vol. 10. London, L. A. Reeve. Pl. 4, fig. 16. (As *Soletellina japonica* Deshayes in Reeve, 1857)

**TYPE LOCALITY:** Japan

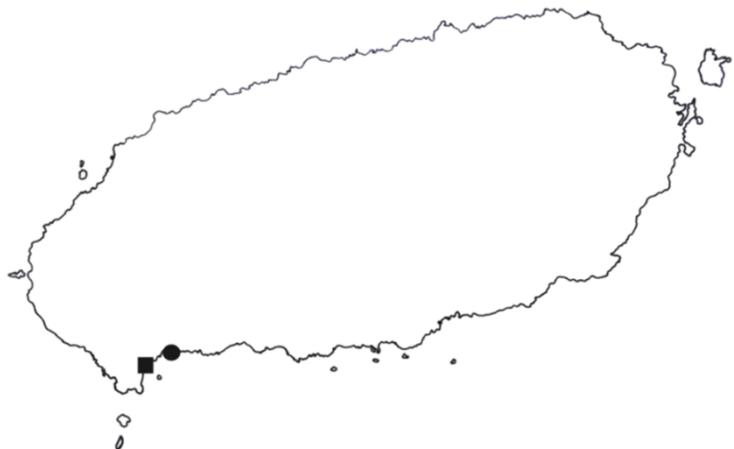

Fig. 109: Distribution of *D. cuneatus* (●) and *Heteroglypta contraria* (■)

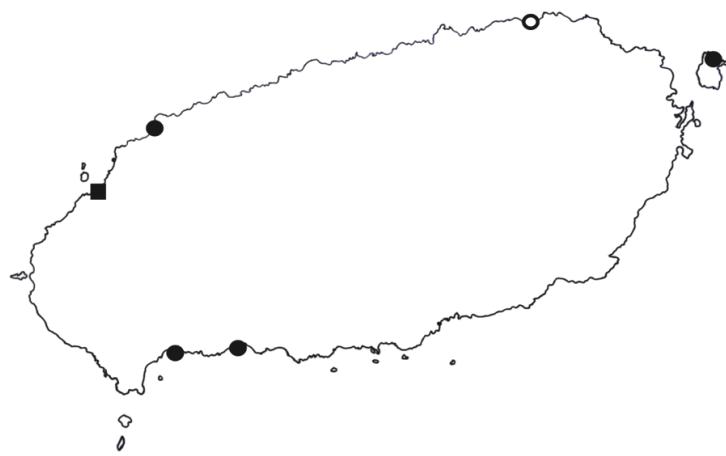

Fig. 110: Distribution of *H. atrata* (●) and *H. boeddinghausi* (■)

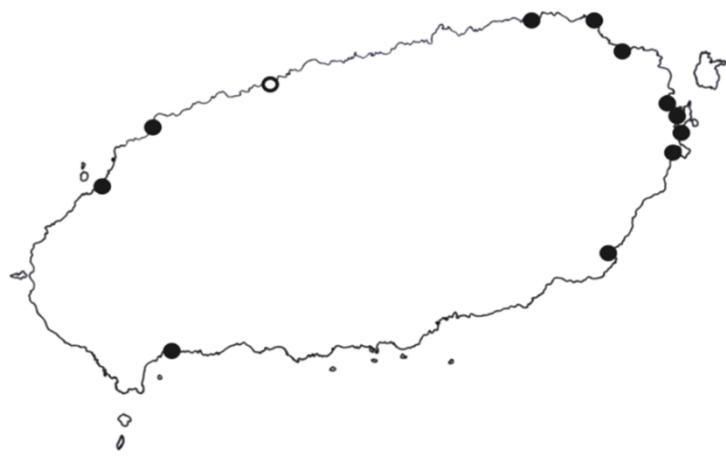

Fig. 111: Distribution of *N. japonica*

**Genus: *Nuttallia* Dall, 1898**

**HABITAT:** Sand and sandy mud, from intertidal zone to depth of 10 m

**GENERAL DISTRIBUTION:** Southern Kurile Islands and Sakhalin to Kyushu; **JEJU:** Iho, Gimnyeong, Haengwon, Sehwa, Jongdal-ri, Ojo-ri, Seongsan, Shinyang, Pyoseon, Hwasoon, Hyeopjae, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** This species has been misreported by a number of authors as *N. olivacea* (=*N. obscurata*) and, in turn, *N. olivacea* has been figured as *N. japonica* in some Japanese works. The distribution of *N. japonica* in Korea is unclear (Lutaenko and Noseworthy, 2012). *Soletellina olivacea* Lischke, 1874 non Jay 1857 is a synonym.

**161 *Nuttallia obscurata* (L. A. Reeve 1857)**

(Fig. 112)

**ORIGINAL DESCRIPTION:** Reeve, L. A. 1857: Monograph of the genus *Soletellina*. Conchologia Iconica; or, illustrations of the shells of molluscous animals, vol. 10. London, L. A. Reeve. Pl. 4; fig. 21. (As *Soletellina obscurata* Reeve, 1857)

**TYPE LOCALITY:** Unknown

**HABITAT:** Sandy mud, from intertidal zone to depth of 10 m

**GENERAL DISTRIBUTION:** Eastern Russia to Taiwan; **JEJU:** Gimnyeong, Hado, Jongdal-ri, Seongsan, Shinyang, Pyoseon, Hwasoon, Keumneung, Hyeopjae

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** Similar to *N. japonica*, and often confused with that species. *Nuttallia olivacea* (Jay, 1856) is a synonym.

**162 *Nuttallia cf. ezonis* Kuroda & Habe in Habe, 1955**

(Fig. 112) (Plate 8: G-J)

**ORIGINAL DESCRIPTION:** Kuroda T. & Habe, T. In Habe, 1955. Publications of the Akkeshi Marine Biological Station, no. 4, pp. 17-18, pl. I, figs. 12, 13. (As *Nuttallia ezonis* Kuroda & Habe in Habe, 1955)

**TYPE LOCALITY:** Hokkaido, Japan

**HABITAT:** Fine sand and sandy mud, from the intertidal zone to depth of 6 m

**GENERAL DISTRIBUTION:** Sakhalin to Korea and Yellow Sea; **JEJU:** Handong, Shinyang

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Lowboreal

**REMARKS:** *Ezonis* is more fragile, more elongate, and the valves markedly unequal compared to *olivacea* Jay (= *obscurata* Reeve) (Huber, 2010). New species record for Jeju Island.

**Family:** SEMELIDAE Stoliczka, 1870

**Subfamily:** Semelinae Stoliczka, 1870

**Genus:** *Abra* Lamarck, 1818

**163 *Abra philippinensis* (E. A. Smith 1885)**

(Fig. 113)

**ORIGINAL DESCRIPTION:** Smith, E. A. 1885. Report on the Lamellibranchiata collected by HMS Challenger, 1873-76, Challenger Reports (Zoology) Vol. 13: 86, 87, pl. 5, figs. 4, 4b. (As *Semele (Abra) philippinensis* E. A. Smith 1885)

**TYPE LOCALITY:** Panay Island, Philippines

**HABITAT:** Sandy mud with plant debris at depth of 412-1240 m

**GENERAL DISTRIBUTION:** Southern Korea and Japan to Indo-West Pacific; **JEJU:** Hwasoon (Min *et al.*, 2004)

Fig. 112: Distribution of *N. obscurata* (●) and *N. cf. ezonis* (■)

Fig. 113: Distribution of *A. philippinensis* (●), *A. kinoshitai* (■), and *Abrina lunella* (▲)

Fig. 114: Distribution of *S. divaricatus*

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Huber (2010) stated that he could not detect significant differences between *philippinensis* and *maxima*, both of which have been reported by different authors from Japan. It appears that *maxima* was founded on large specimens of *philippinensis*. *Abra maxima* (Sowerby, III, 1894) is a synonym.

**164 *Abra kinoshitai* Kuroda & Habe in Habe, 1958**

(Fig. 113)

**ORIGINAL DESCRIPTION:** Habe, T. 1958. Report on the Mollusca chiefly collected by the S. S. Soyo-Maru of the Imperial Fisheries Experimental Station on the continental shelf bordering Japan during the years 1922-1930. Part 4. Lamellibranchia (2). *Seto Marine Biological Laboratory, Publications* [Kyoto University]. 7(1) 42, 43. (As *Abrina kinoshitai* Kuroda and Habe, 1958) (Without illustration)

**TYPE LOCALITY:** Off Miyazaki Prefecture, Kyushu, Japan

**HABITAT:** Sandy mud at depth of 50-500 m

**GENERAL DISTRIBUTION:** Southern Korea and Japan to Yellow Sea; **JEJU:** Hwasoon (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** *Abra skinoshitai* Kuroda and Habe, 1958 [sic] is a misspelling.

**165 *Abra lunella* (Gould, 1861)**

(Fig. 113)

**ORIGINAL DESCRIPTION:** Gould, A.A. 1861. Descriptions of shells collected by the North Pacific Exploring Expedition (*continued*). Proceedings of the Boston Society of Natural History 8: 29. (As *Macoma lunella* Gould, 1861) (Without illustration)

**TYPE LOCALITY:** Taiwan, 24°N

**HABITAT:** Fine sand and mud, at depth of 10-210 m

**GENERAL DISTRIBUTION:** East Sea to Taiwan; **JEJU:** Hwasoon (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**Family:** SOLECURTIDAE d'Orbigny, 1846

**Genus:** *Solecurtus* Blainville, 1824

**166 *Solecurtus divaricatus* (Lischke, 1869)**

(Fig. 114) (Plate 7: E, F)

**ORIGINAL DESCRIPTION:** Lischke, C. E. 1869. Diagnosen neuer Meeres-Konchylien aus Japan. *Malakozoologische Blatter* 16: 108. (As *Macha divaricata* Lischke, 1869) (Without illustration -- see Lischke, 1869, Jap. Meeres-Conch., pl. 10, figs. 1, 2.)

**TYPE LOCALITY:** Japan

**HABITAT:** Fine sand and sandy mud, from intertidal zone to depth of 80 m

**GENERAL DISTRIBUTION:** Southern Korea and Japan to Taiwan; **JEJU:** Jeju-shi, Hamdok, Gimnyeong, Ojo-ri, Shinyang, Pyoseon, Hyeopjae

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** True *S. divaricatus* appears biogeographically restricted, confined to Japan, Taiwan, and the Yellow Sea. From this latter location the largest specimens are known (Huber, 2010).

**Superfamily: Ungulinoidea Gray, 1854**

**Family UNGULINIDAE Gray, 1854**

**Genus:** *Cycladicama* Valenciennes in Rousseau, 1854

**167 *Cycladicama lunaris* (Yokoyama, 1927)**

(Fig 115)

**ORIGINAL DESCRIPTION:** Yokoyama, M. 1927a. Mollusca from the Upper Musashino of Tokyo

and its suburbs. Journal of the Faculty of Science, Imperial University of Tokyo, Geology, Mineralogy, Geography, Seismology: 433. (As *Diplodonta lunaris* Yokoyama, 1927)

**TYPE LOCALITY:** Unavailable

**HABITAT:** Sandy-mud bottom at depth of 10-500 m

**GENERAL DISTRIBUTION:** Korea and Japan; **JEJU:** Shinyang, Pyoseon, Munseom, Yerae, Sagyei, Hyeopjae

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**Genus:** *Diplodonta* Brönn, 1831

**168 *Diplodonta sowerbyi* Kuroda & Habe, 1952**

(Fig. 116)

**ORIGINAL DESCRIPTION:** Kuroda, T. and Habe, T. 1952. Checklist and Bibliography of the Recent Marine Mollusca of Japan. Tokyo: Stach. (As *Felaniella sowerbyi* Kuroda and Habe, 1952)

**TYPE LOCALITY:** Unavailable

**HABITAT:** Coral reefs, sand, and silt and mud, from intertidal zone to depth of 33 m.

**GENERAL DISTRIBUTION:** Korea; Indo-W. Pacific; **JEJU:** Hamdeok, Hado, Udo (Sanhosa), Pyoseon, Munseom, Keumneung

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** A moderately common species in beach drift, usually found with single valves.

**169 *Diplodonta gouldi* Yokoyama, 1920**

(Fig. 117)

**ORIGINAL DESCRIPTION:** Yokoyama, M. 1920. Fossils from the Miura Peninsula and its immediate north. Journal of the College of Science, Imperial University, Tokyo. Vol. 39 (6): 132, pl. 10; fig.5. (As *Diplodonta gouldi* Yokoyama, 1920)

**TYPE LOCALITY:** Miyata, Japan

**HABITAT:** Fine sand bottom, at depth of 10-50 m

**GENERAL DISTRIBUTION:** Korea and Japan; **JEJU:** Haengwon, Handong, Jongdal-ri, Ojo-ri, Seongsan, Munseom, Hwasoon, Yongmeori, Keumneung

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-lowboreal

**170 *Diplodonta japonica* (Pilsbry, 1895)**

(Fig. 118)

**ORIGINAL DESCRIPTION:** Pilsbry, H. A. 1895. Catalogue of the Marine Mollusks of Japan with descriptions of new species and notes on others collected by Frederick Stearns. Detroit, F. Stearns: 132, 133, pl. 3; figs 6, 7. (As *Diplodonta (?semiaspera var.) japonica* Pilsbry, 1895).

**TYPE LOCALITY:** Unknown

**HABITAT:** Boring in mudstone from lower intertidal zone to depth of 20 m

**GENERAL DISTRIBUTION:** Korea and Japan; **JEJU:** Iho, Sehwa, Udo (Hagosudong), Seeongsan, Jungmun, Hwasoon, Sagyei, Hyeopjae

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** *Phylyctiderma japonicum* (Pilsbry, 1895) is a synonym.

**Superfamily: Veneroidea Rafinesque, 1815**

**Family: VENERIDAE Rafinesque, 1815**

**Subfamily: Venerinae Rafinesque, 1815**

**Genus: *Venus* Linnaeus, 1758**

**171 *Venus (Ventricoloidea) cassinaeformis* (Yokoyama, 1926)**

(Fig. 119) (Plate 10: E, F)

**ORIGINAL DESCRIPTION:** Yokoyama, M. (1926b) Tertiary Mollusca from southern Tōtōmi. Journal of the Faculty of Science, Tokyo Imperial University, section 2, 1, 352, pl. 39, figs. 8-9. (As *Chione cassinaeformis* Yokoyama, 1926)

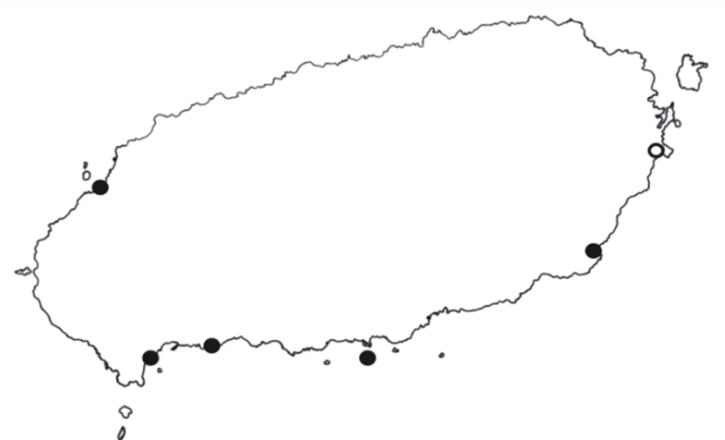

Fig. 115: Distribution of *C. lunaris*

Fig. 116: Distribution of *D. sowerbyi*

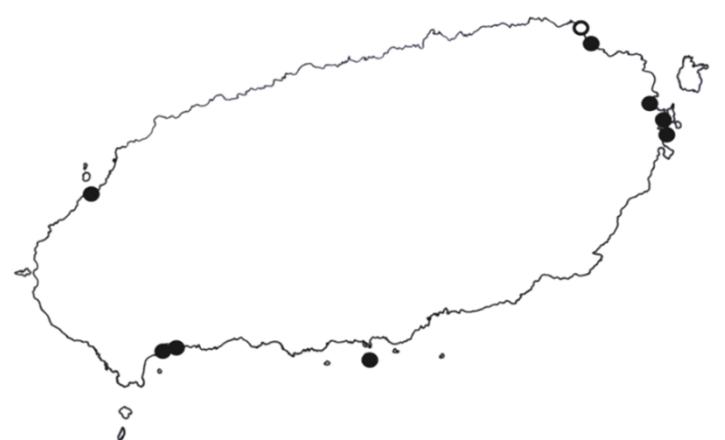

Fig. 117: Distribution of *D. gouldi*

**TYPE LOCALITY:** Unavailable

**HABITAT:** Sand and coarse sand, also muddy substrate, at depth of 5-200 m

**GENERAL DISTRIBUTION:** Korea and Japan to Indo-W. Pacific; **JEJU:** East of Songsan, Shinyang, Sagyei

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** *Venus cassinaeformis* is the correct name for the compressed Japanese species. Higo *et al.* (1999) did not accept *V. foveolata* an Asian species. Reeve's *V. foveolata* (1864, vol. 14, sp. 11), despite an erroneous type locality, is quite similar to *cassinaeformis*. However, no *foveolata* type is available and none has been found; thus *Venus foveolata* is regarded as a *nom. dub.* *V. foveolata* Reeve, 1863 non Sowerby II, 1853 is a synonym.

**Genus: *Globivenus* Coen, 1934**

**172 *Globivenus toreuma* (Gould, 1850)**

(Fig. 120)

**ORIGINAL DESCRIPTION:** Gould, A.A. 1850. [Shells from the United States Exploring Expedition]. Proceedings of the Boston Society of Natural History 3(19): 277. (As *Venus toreuma* Gould, 1850) (Without illustration)

**TYPE LOCALITY:** Mangsi Island, Philippines

**HABITAT:** Coarse sand and fine gravel, and coral sand around rocks; from intertidal zone to depth of 54 m

**GENERAL DISTRIBUTION:** Japan to Indo-Pacific; Hawaii; **JEJU:** Pyoseon, Sagyei

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**Genus: *Placamen* Iredale, 1925**

**173 *Placamen lamellata* (Röding, 1798)**

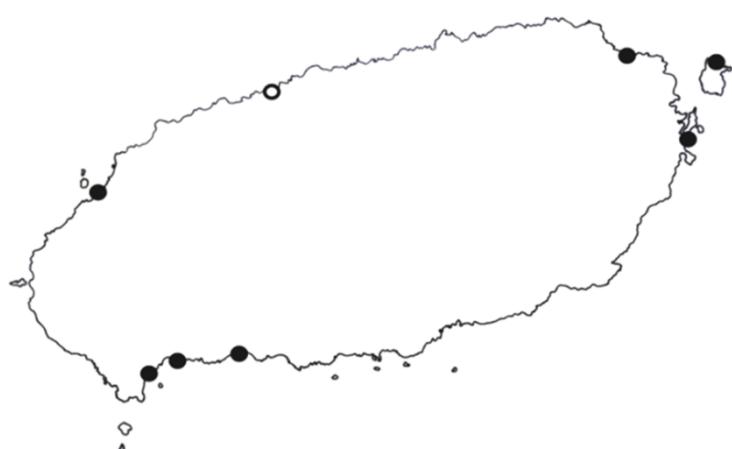

Fig. 118: Distribution of *D. japonica*

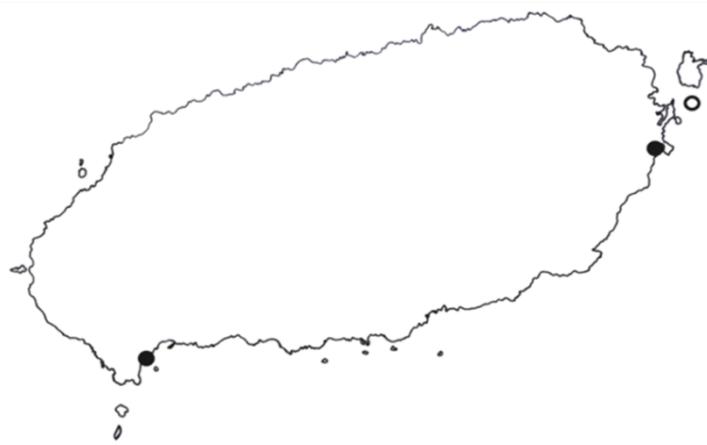

Fig. 119: Distribution of *V. cassinaeformis*

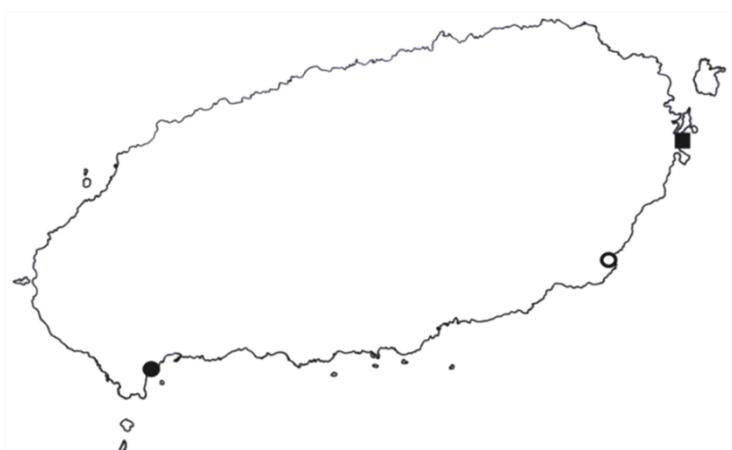

Fig. 120: Distribution of *G. toreuma* (●) and *Placamen lamellata* (■)

(Fig. 120)

**ORIGINAL DESCRIPTION:** Röding, P. F. (1798) *Museum Boltenianum sive catalogus cimeliorum e tribus regnis naturae quae olim collegerat Joa. Fried Bolten, M.D.p.d. Pars Secunda continens conchylia sive testacea univalvia, bivalvia & multivalvia.* Johan. Christi. Trappii., Hamburgi. p. 183. (As *Venus lamellatum* Roding, 1798) (Without illustration)

**TYPE LOCALITY:** Unknown

**HABITAT:** Various sandy or muddy substrates, from intertidal zone to depth of 100 m

**GENERAL DISTRIBUTION:** Southern Korea and southern Japan to tropical West Pacific; western Indian Ocean; **JEJU:** Seongsan (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** The specimen figured by Okutani (2000) as *P. tiara* is actually *P. lamellosum* (Roding, 1798. (Huber, 2010). *Placamen tiara* (Dillwyn, 1817) is a synonym.

**Genus: *Timoclea* T. Brown, 1827**

**174 *Timoclea marica* (Linnaeus 1758)**

(Fig. 121)

**ORIGINAL DESCRIPTION:** Linnæus, C. 1758. *Systema naturæ per regna tria naturæ, secundum classes, ordines, genera, species, cum characteribus, differentiis, synonymis, locis. Tomus I. Editio decima, reformata. Holmiæ. (Salvius). 685.* (As *Venus marica* Linnaeus, 1758) (Without illustration)

**TYPE LOCALITY:** Unknown (Caribbean – Linnaeus (1758) is erroneous) (Huber, 2010)

**HABITAT:** Shallowly buried in sand flats and sea grass beds, from intertidal zone to depth of 27 m

**GENERAL DISTRIBUTION:** Southern Korea and Japan to Indo-Pacific; **JEJU:** Iho, Udo (Hagosudong), Jongdal-ri, Seongsan, Pyoseon, Hwasoon, Sagyei, Keumneung, Hyeopjae,

Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** *Timoclea (Glycydonta) marica* (Linnaeus, 1758); *Glycydonta marica* (Linnaeus, 1758); *Veremolpa marica* (Linnaeus, 1758) are synonyms.

**175 *Timoclea costellifera* (Adams & Reeve 1850)**

(Fig. 121)

**ORIGINAL DESCRIPTION:** Adams, A. & Reeve, L. 1850. Mollusca in The Zoology of the Voyage of H.M.S. Samarang, under the command of Captain Sir Edward Belcher C. B., F. R. A. S., F. G. S., during the years 1843-1846. Edited by Arthur Adams. London: Reeve and Benham, 1848-1850. 84, pl. 21; fig. 18. (As *Venus costellifera* Adams and Reeve, 1850)

**TYPE LOCALITY:** Philippines

**HABITAT:** Coarse sand and among gravel and coral rubble, from intertidal zone to depth of 80 m

**GENERAL DISTRIBUTION:** Southern Korea and Japan to Indo-W. Pacific; South Africa (Check); **JEJU:** Hwasoon (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** *Timoclea (Chioneryx) costellifera* (A. Adams and Reeve, 1850); *Veremolpa costellifera* (A. Adams and Reeve, 1850) are synonyms.

**Genus: *Leukoma* Römer, 1857**

**176 *Leukoma jedoensis* (C. E. Lischke 1874)**

(Fig. 122)

**ORIGINAL DESCRIPTION:** Lischke, C. E. 1874. Japanische Meers-Conchylien. Ein Beitrag zur Kenntnis der Mollusken Japans, mit besonderer Rücksicht auf die Geographische

Verbreitung derselben, 3: 84, pl. 7; figs. 1-9. (As *Venus jedoensis* Lischke, 1874)

**TYPE LOCALITY:** Tokyo, Japan

**HABITAT:** Coarse sand with stones, also sandy mud substrate, from intertidal zone to depth of 20 m

**GENERAL DISTRIBUTION:** East Sea to Yellow Sea; **JEJU:** Jeju-shi, Jongdal-ri, Seongsan

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** *Protothaca (Notochione) jedoensis* (Lischke, 1874) is a synonym.

**Subfamily: Callocardiinae Dall, 1895**

**Genus: *Pitar* Römer, 1857**

**177 *Pitar inflatus* (G. B. Sowerby II, 1851)**

(Fig. 123)

**ORIGINAL DESCRIPTION:** Sowerby, G. B. II. 1851. Thesaurus Conchyliorum, or Monograph of Genera of Shells. Vol. II. Monograph of Genus *Cytherea* - Fam. Veneridae - p. 637, pl. CXXXIII (133); figs. 127, 128 (Vol. II (plates)) (As *Cytherea inflata* Sowerby II, 1851)

**TYPE LOCALITY:** Malaku, Indonesia; Cebu, Philippines

**HABITAT:** Sandy mud with coral debris, from intertidal zone to depth of 40 m

**GENERAL DISTRIBUTION:** Southern Korea and Japan to Tropical West Pacific; **JEJU:** Jeju-shi, Shinyang, Hwasoon

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Min (2004) includes *P. affine* in the Korean fauna; however, according to Huber, it occurs only in the Indian Ocean. Okutani (2000) includes a figure (31) with the

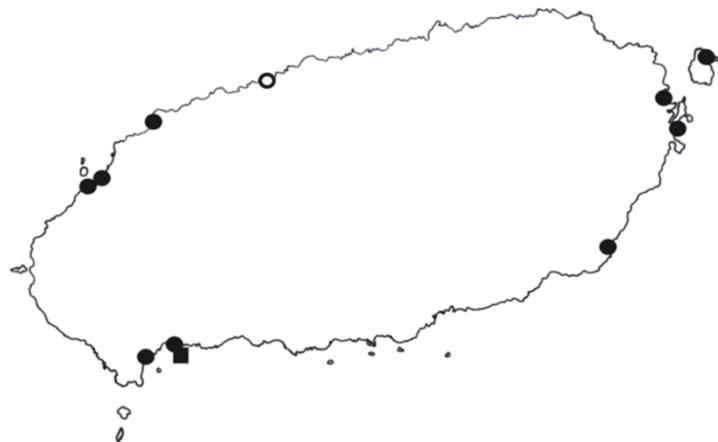

Fig. 121: Distribution of *T. marica* (●) and *T. costellifera* (■)

Fig. 122: Distribution of *L. jedoensis*

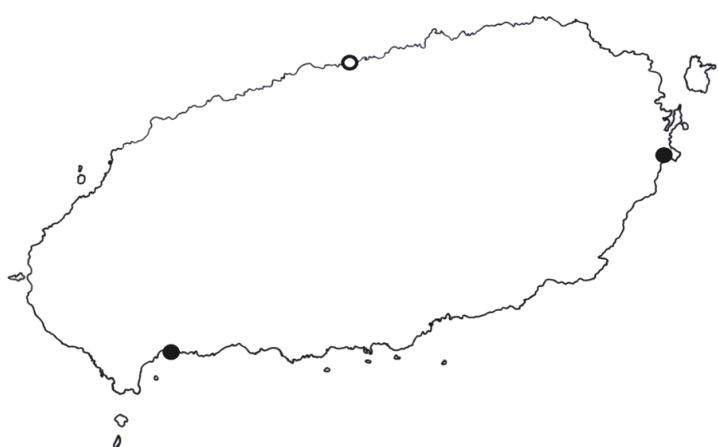

Fig. 123: Distribution of *P. inflatus*

synonym *P. variegatus* Kuroda & Habe in Kuroda *et al.*, 1971. “*P. affinis* does not occur in the Philippines or in Australia. Instead, the large, rounded, smooth *Pitar* named “*affinis*” by most authors is instead *Cytherea inflata* Sowerby II, 1851” (Huber, 2010). *P. affinis* auctt. non Gmelin, 1791; *Pitar variegatum* Kuroda & Habe in Kuroda *et al.*, 1971 are synonyms.

**178 *Pitar (Pitar) sulfureus* H. A. Pilsbry, 1904**

(Fig. 124)

**ORIGINAL DESCRIPTION:** Pilsbry, H.A., 1904. New Japanese Marine Mollusca: Pelecypoda. Proceedings of the Academy of Natural Sciences of Philadelphia 56: 553, 554, pl. 39; figs 7-9. (As *Pitar sulfurea* Pilsbry, 1904)

**TYPE LOCALITY:** Awaji Island, southern Japan

**HABITAT:** In bays, on sandy and muddy substrate, from intertidal zone to depth of 20 m

**GENERAL DISTRIBUTION:** Southern Korea and Japan to tropical West Pacific; **JEJU:** Seongsan, Jungmun, Sagyei, Hamo

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** *Pitar (Pitarina) sulfureum* Pilsbry, 1904 is a synonym.

**Genus: *Callista* Poli, 1791**

**179 *Callista (Callista) chinensis* ("Chemnitz" Holten 1802)**

(Fig. 125)

**ORIGINAL DESCRIPTION:** Holten, H. S. 1802. *Enumeratio systematica conchyliorum beat J. H. Chemnitzi quondam ecclesiae Zebaothi Havniae pastoris, plurim societum sodialis p. p. quae publica auctione venduntur die 7me Decembris ano pres. Copenhagen: K. H. Scidelini*, 20. (As *Venus chinensis* Holten, 1802) (Without illustration)

**TYPE LOCALITY:** Unknown

**HABITAT:** Fine sandy bottom, at depth of 3-50 m

**GENERAL DISTRIBUTION:** Korea and Northern Japan to South China Sea; **JEJU:** Hwasoon, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**180 *Callista (Callista) pilsbryi* Habe, 1960**

(Fig. 125)

**ORIGINAL DESCRIPTION:** Habe, T. 1960a. New species of molluscs from the Amakusa Marine Biological Laboratory, Reihoku-cho, Amakusa, Kumamoto Pref., Japan. Publications of the Seto Marine Biological Laboratory 8(2): 291. (As *Callista pilsbryi* Habe, 1960)  
(Without illustration)

**TYPE LOCALITY:** Tomioka, Honshu, Japan

**HABITAT:** In coral rubble, coarse sandy substrate, at depth of 10-100 m

**GENERAL DISTRIBUTION:** East Sea to South China Sea; **JEJU:** Supseom, Seogwipo, Hwasoon (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Huber (2010) states that *Callista pilsbryi* has been described from W. Kyushu. However, Habe (1960) includes this area only in its distribution range, stating: "West coast of Kyushu, Shikoku, and Pacific coast of Honshu", with Tomioka as the type locality.

**Genus: *Saxidomus* Conrad, 1837**

**181 *Saxidomus purpurata* (Sowerby II, 1852)**

(Fig. 126)

**ORIGINAL DESCRIPTION:** Sowerby, G. B. II. 1851. Thesaurus Conchyliorum, or Monograph of Genera of Shells. Vol. II. Monograph of Genus Tapes (Fam. Veneridae), p. 692,

Fig. 124: Distribution of *P. sulfureus*

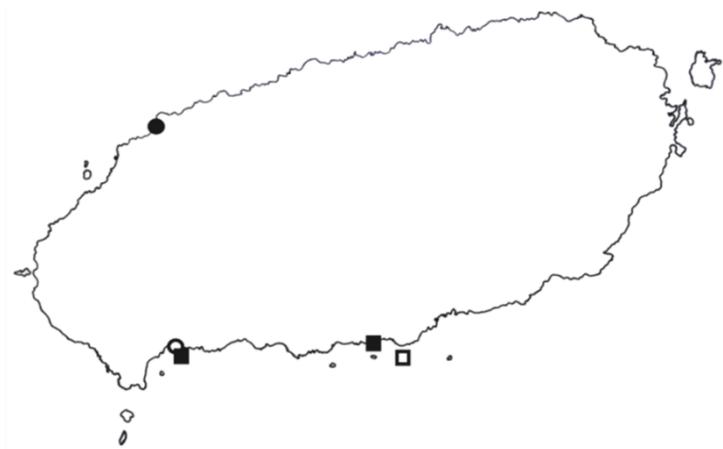

Fig. 125: Distribution of *C. chinensis* (●) and *C. pilosbryi* (■)

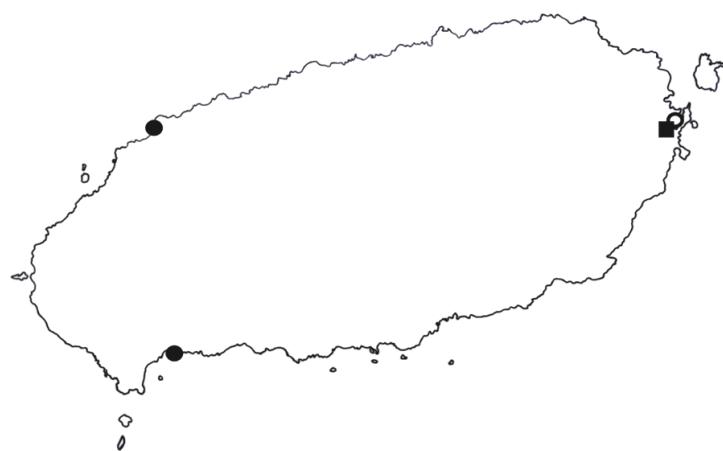

Fig. 126: Distribution of *D. (A.) japonica* (●) and *S. purpuratus* (■)

pl. 150; figs. 124, 125. (As *Tapes purpurata* Sowerby II, 1852)

**TYPE LOCALITY:** Unknown (Karachi, Pakistan (Sowerby) is erroneous) (Huber, 2010)

**HABITAT:** Mud, sandy mud, and gravel, from intertidal zone to depth of 50 m

**GENERAL DISTRIBUTION:** East Sea to Yellow Sea, **JEJU:** Ojo-ri (Choi *et al.*, 2000)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**Subfamily: Dosiniinae Deshayes, 1853**

**Genus: *Dosinia* Scopoli, 1777**

**182 *Dosinia (Asa) japonica* (L. A. Reeve 1850)**

(Fig. 126)

**ORIGINAL DESCRIPTION:** Reeve, L. A. 1850. Monograph of the genus *Artemis* In Conchologica Iconica: or, Illustrations of the Shells of Molluscous Animals, vol. 6. Lovell Reeve, London: 10 pls. with captions [April, 1850], pl. 3; fig. 17. (As *Artemis japonicus* Reeve, 1850)

**TYPE LOCALITY:** Ibusuki, Kyushu, Japan

**HABITAT:** Sandy substrate, from intertidal zone to depth of 70 m

**GENERAL DISTRIBUTION:** East Sea to East China Sea; **JEJU:** Ojo-ri, Hwasoon, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** *Phacosoma japonicus* (Reeve, 1850) is a synonym.

**183 *Dosinia (Asa) troscheli* C. E. Lischke, 1873**

(Fig. 127)

**ORIGINAL DESCRIPTION:** Lischke, C. E. 1873. Diagnosen neuer Meeres-Conchylien aus Japan. *Malakozoologische Blatter*, 21: 24-25. (As *Dosinia troscheli* Lischke, 1873)

(Without illustration)

**TYPE LOCALITY:** Southern Japan

**HABITAT:** Sand, at depth of 10-35 m

**GENERAL DISTRIBUTION:** Korea and Japan to South China Sea; **JEJU:** Seongsan, Beophwan, Gangjeong, Hwasoon, Sagyei, Kwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** *Phacosoma troscheli* (Lischke, 1873) is a synonym.

**184 *Dosinia (Dosinella) cf. angulosa* (Philippi, 1847)**

**(Fig. 127)**

**ORIGINAL DESCRIPTION** Philippi, R.A. 1847. Abbildungen und Beschreibungen neuer oder wenig gekannter Conchylien. Cassel: Theodor Fischer. Vol.2, p. 229, pl. 6, fig. 1. (As *Cytherea (Artemis) angulosa* Philippi, 1847)

**TYPE LOCALITY:** Off North Borneo

**HABITAT:** On coarse sand, and coral sand, at depths of 3-25 m

**GENERAL DISTRIBUTION:** Korea and Japan; East China Sea to Indonesia; **JEJU:** Sagyei, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Min, *et al.* (2004) includes *Pardosinia amphidesmoides* from Jeju Island. Huber (2010) gives a range for this species from East Africa to the Southwestern Pacific; Okutani (2000) does not include this species. The inclusion of *P. amphidesmoides* in Min *et al.* may be a misidentification of *D. (D.) angulosa*, which resembles the former species. *Dosinella angulosa* (Philippi, 1847) is a synonym.

**185 *Dosinia (Bonartemis) histrio* (Gmelin, 1791)**

(Fig. 128)

**ORIGINAL DESCRIPTION:** Gmelin, J. F. 1791. Caroli a Linné, systema naturae. Lipsiae (Leipzig), (Beer). 13. Tom. I. Pars VI. (Vol. 1, part 6), 3287. (As *Venus histrio* Gmelin, 1791) (Without illustration)

**TYPE LOCALITY:** India

**HABITAT:** On medium and coarse sand, often in coral reefs, at depth of 3-60 m

**GENERAL DISTRIBUTION:** East Sea to Indo-West Pacific; **JEJU:** Sehwa, Udo (Hagosudong), Seongsan, Shinyang, Jungmun, Yerae, Hwasoon, Yongmeori, Sagye, Hamo

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** This species is similar to *B. iwakawai*; the latter species has thin commarginal lammelae as compared to *B. histrio*, which has commarginal ribs. *Bonartemis* is used for the colorful, lamellate Indo-Pacific species. *Bornatemis histrio* (Gmelin, 1791) is a synonym.

**186 *Dosinia (Bonartemis) iwakawai* Oyama & Habe in Habe, 1961**

(Fig. 129) (Plate 10: G, H)

**ORIGINAL DESCRIPTION:** Oyama, K. and Habe, T. in Habe, 1962, Colored Illustrations of the Shells of Japan 2 [2]: 131, App. 38, pl. 59, fig. 11. (As *Dosinia (Bonartemis) iwakawai*, Oyama & Habe, 1961)

**TYPE LOCALITY:** Ibusuki, Kyushu, Japan

**HABITAT:** Coarse sand and coral sand substrate, from intertidal zone to depth of 50 m

**GENERAL DISTRIBUTION:** Southern Korea and Japan to East China Sea; **JEJU:** Seongsan, Shinyang, Bomok, Jungmun, Yerae, Hwasoon, Yongmeori, Sagyei

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** *Bonartemis histrio iwakawai* Oyama and Habe, 1971 is a synonym.

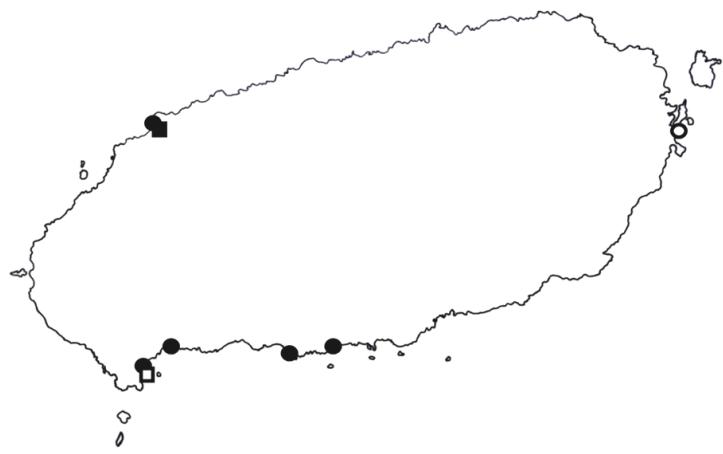

Fig. 127: Distribution of *D. (A.) troscheli* (●) and *D. (D.) cf. angulosa* (■)

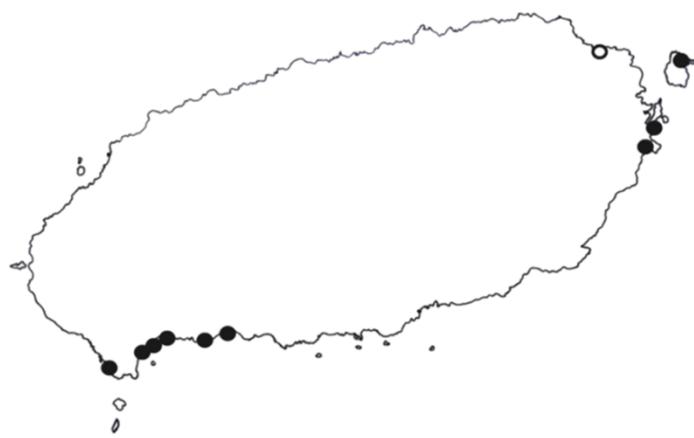

Fig. 128: Distribution of *D. (B.) histrio*

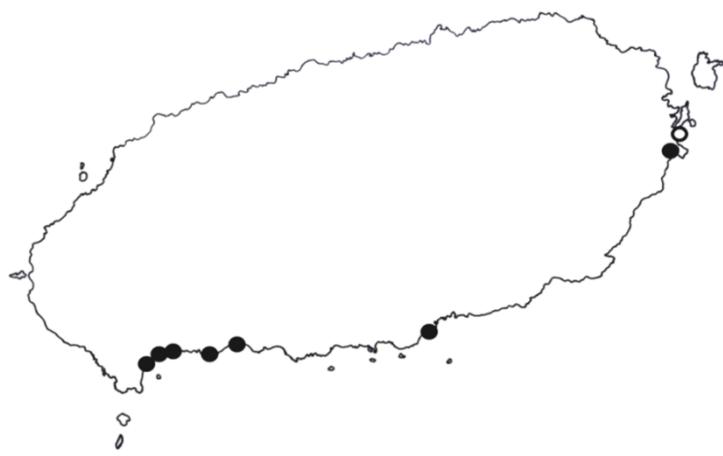

Fig. 129: Distribution of *D. (B.) iwakawai*

**Subfamily: Tapetinae Gray, 1851**

**Genus: *Venerupis* Lamarck, 1818**

**187 *Venerupis (Ruditapes) philippinarum* (Adams & Reeve 1850)**

**(Fig. 130)**

**ORIGINAL DESCRIPTION:** Adams, A. & Reeve, L. 1850. Mollusca in The Zoology of the Voyage of H.M.S. Samarang, under the command of Captain Sir Edward Belcher, C. B., F. R. A. S., F. G. S., during the years 1843-1846. Edited by Arthur Adams. London: Reeve and Benham, 1848-1850. 79, pl. 22; fig. 10. (*Venus philippinarum* Adams & Reeve, 1850)

**TYPE LOCALITY:** “Philippine Archipelago” – erroneous (Higo *et al.*, 1999)

**HABITAT:** Bays, estuaries, and protected coasts; shallowly burrowed in coarse sand or mud with gravel, from the intertidal zone to depth of 20 m

**GENERAL DISTRIBUTION:** Sea of Okhotsk to South China Sea; Hawaii, Western and Southern Europe, western North America (introduced); **JEJU:** Iho, Jeju-shi, Samyang, Hamdeok Gimnyeong Wolpyeong Haengwon Handong Sehwa Udo (Sanhosa), Jongdal-ri, Ojo-ri, Seongsan, Seopjikoji, Shinyang, Pyoseon, Bomok, Munseom, Seogundo, Gangjeong ,Jungmun, Yerae, Daepyeong, Hwasoon, Yongmeori, Sagyei, Hyungjaeseom,, Hamo, Keumneung, Hyeopjae, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-lowboreal

**REMARKS:** “Despite the many *philippinarum* records throughout the IND [Indo-Pacific], also in most recent literature, *philippinarum* is a temperate Japanese and Chinese species, introduced now in various other parts of the world, and also globally commercially sold as food. As stated by Higo *et al.* (1999) the original type locality “Philippine Archipelago” could never be verified and is erroneous. No true *philippinarum* was found on the many Philippine Islands visited, nor were any seen reliably from there. Many of these *philippinarum* records represent instead the tropical *aspera*” (Huber, 2010). *Ruditapes philippinarum* (A. Adams

and Reeve, 1850) is a synonym.

**188 *Venerupis (Ruditapes) aspera* (Quoy & Gaimard 1835)**

(Fig. 131)

**ORIGINAL DESCRIPTION:** Quoy, J. R. C. & Gaimard J. P. 1835. Voyage de découvertes de l'Astrolabe exécuté par ordre du Roi, pendant les années 1826–1827–1828–1829, sur le commandement de M. J. Dumont d'Urville. J. Tastu, Paris. Zoologie, Mollusques. Volume 3: 524, pl. 84; figs. 3, 4. (As *Venus aspera* Quoy & Gaimard, 1835)

**TYPE LOCALITY:** Port Dorey, New Guinea

**HABITAT:** Fine to coarse sandy or gravelly substrate, from intertidal zone to depth of 5 m

**GENERAL DISTRIBUTION:** Korea and Japan to Indo-Pacific; **JEJU:** Iho, Jeju-shi, Samyang Gimnyeong, Wolpyeong, Haengwon, Handong, Sehwa, Hado, Udo (Hagosudong), Udo (Sanhosa), Jongdal-ri, Ojo-ri, Seongsan, Shinyang, Pyoseon, Wimi, Munseom, Seogundo, Gangjeong, Jungmun, Yerae, Daepyeong, Hwasoon, Yongmeori, Songaksan, Gapado, Hamo, Sinchang, Keumneung, Biyangdo, Hyeopjae, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** *R. bruguieri* appears restricted to the Indian Ocean. The pallial sinus is generally deeper than in *aspera*, extending to or surpassing the midline; the shell is generally more elongate. From Japan and Australia only *R. aspera* is known. The well known *Venus variegata* Sowerby II, 1852 from the Philippines is preoccupied by *Venus variegata* Gmelin, 1791 which represents the European *Ruditapes*. Thus, the valid earliest name for this well-known but preoccupied *variegata* is *Venerupis (Ruditapes) aspera* (Quoy & Gaimard 1835) (Huber, 2014). *Ruditapes bruguieri* (Min, 2004 non Hanley, 1845). *Ruditapes variegata*. (Sowerby II, 1852) are synonyms.

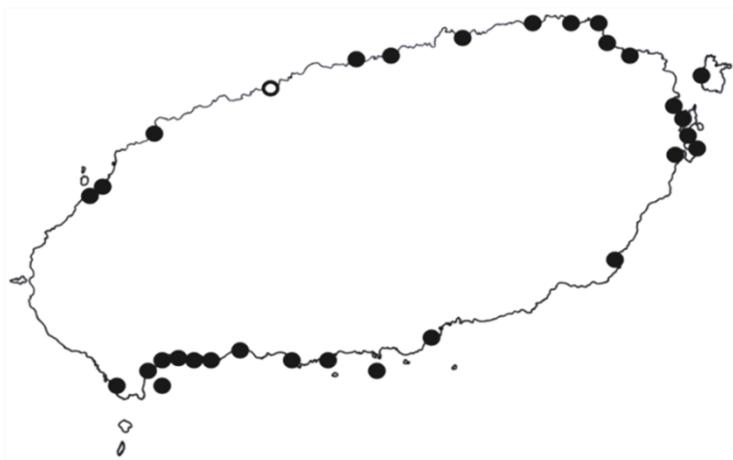

Fig. 130: Distribution of *V. (R.) philippinarum*

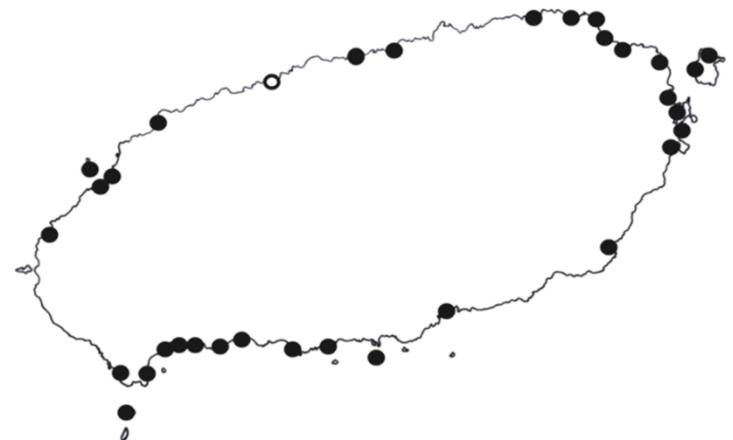

Fig. 131: Distribution of *V. (R.) aspera*

Fig. 132: Distribution of *P. euglypta* (●) and *P. schnelliana* (■)

**Genus: *Paphia* Röding, 1798**

**189 *Paphia euglypta* (Philippi, 1847)**

(Fig. 132)

**ORIGINAL DESCRIPTION:** Philippi R. A. 1847. *Testaceorum novorum centuria.*

*Zeitschrift fur Malakozoologie*, 4: 89. (As *Venus euglypta* Philippi, 1847)

**TYPE LOCALITY:** Unknown

**HABITAT:** Fine sand and mud, at depth of 10-40 m

**GENERAL DISTRIBUTION:** East Sea to South China Sea; **JEJU:** Beophwan, Gangjeong, Biyangdo (Choi *et al.*, 2000)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**190 *Paphia schnelliana* (Dunker, 1865)**

(Fig. 132)

**ORIGINAL DESCRIPTION:** Dunker, W .R. 1858-1878. *Novitates conchologicae.*

*Abbildung und Beschreibung neuer Conchylien. 11. Abtheilung. Meeres-Conchylien.* Cassel

(Fischer) 75, pl. 25; figs. 7-9) (As *Tapes schnellianus* Dunker, 1865)

**TYPE LOCALITY:** Western Kyushu, Japan

**HABITAT:** Fine sand and mud, at depth of 10-160 m;

**GENERAL DISTRIBUTION:** Southern Korea and Japan to East China Sea, **JEJU:** Ojo-ri (Choi *et al.*, 2000)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**191 *Paphia amabilis* (Philippi, 1847)**

(Fig. 133)

**ORIGINAL DESCRIPTION:** Philippi R. A. 1847. *Testaceorum novorum centuria.*

*Zeitschrift fur Malakozoo logie*, 4: (June, 1847), 90. 91. (As *Venus amabilis* Philippi, 1847)

(Without illustration)

**TYPE LOCALITY:** Unknown

**HABITAT:** Fine sand, at depth of 10–80 m

**GENERAL DISTRIBUTION:** East Sea to East China Sea; **JEJU:** East of Seongsan, Seongsan, Bomok, Hwasoon

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**192 *Paphia vernicosa* (Gould 1861)**

(Fig. 134)

**ORIGINAL DESCRIPTION:** Gould, A.A. 1861. Descriptions of shells collected by the North Pacific Exploring Expedition (*continued*). Proceedings of the Boston Society of Natural History 8: 30. (As *Tapes vernicosa* Gould 1861) (Without illustration)

**TYPE LOCALITY:** S. Kyushu-S. Hokkaido, Japan

**HABITAT:** Shallowly burrowed in coarse sand, at depth of 5-50 m

**GENERAL DISTRIBUTION:** East Sea to Yellow Sea; **JEJU:** Jongdal-ri, Seongsan, Sagyei

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**Genus:** *Gomphinella* Marwick, 1927

**193 *Gomphinella neastartoides* (Yokoyama 1922)**

(Fig. 135)

**ORIGINAL DESCRIPTION:** Yokoyama, M., 1922a. Fossils from the upper Musashino of Kazusa and Shimosa. Journal of the College of Science, Imperial University of Tokyo, vol. 44, art. 1, 149, pl. 11, figs. 9, 10. (As *Venus neastartoides* Yokoyama, 1922)

**TYPE LOCALITY:** Boso Peninsula (Kazusa and Shimosa), Honshu, Japan

**HABITAT:** Sand, at depth of 10-70 m

**GENERAL DISTRIBUTION:** Southern Korea (Jeju Island) and Japan to East China Sea;

**JEJU:** Handong, Seongsan, Bomok, Jungmun, Hwasoon, Sagyei, Hamo, Biyangdo, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** *G. neastartoides* is smaller and more elongate than *G. aequilatera*, with lower umbones and different pattern, often with two complete or broken radials; however, dentition and pallial sinus are quite similar to the latter species. *G. neastartoides* is also known from off S. Korea (Huber, 2014). *Gomphina (Gomphina) neastartoides* (Yokoyama, 1922) is a synonym.

**Genus: *Gomphina* Mörcz, 1853**

**194 *Gomphina aequilatera* (G. B. Sowerby I, 1825)**

(Fig. 136) (Plate 10: A-D)

**ORIGINAL DESCRIPTION:** Sowerby, G. B., I. 1825b. *A Catalogue of the shells contained in the collection of the late Earl of Tankerville arranged according to the Lamarckian Conchological System; together with an appendix, containing descriptions of many new species. Illustrated with several coloured plates.* London. 12. (As *Donax aequilatera* G. B. Sowerby I 1825) (Without illustration)

**TYPE LOCALITY:** Unknown

**HABITAT:** Fine and medium sand substrate, from intertidal zone to depth of 60m

**GENERAL DISTRIBUTION:** East Sea to East China Sea; **JEJU:** Iho, Samyang, Hamdeok, Gimnyeong, Wolpyeong, Hado, Udo (Hagosudong), Udo (Geomeollae), Jongdal-ri, Seongsan, Seopjikoji, Shinyang, Pyoseon, Bomok, Jungmun, Hwasoon, Yongmeori, Sagyei, Hamo, Keumneung, Hyeopjae, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

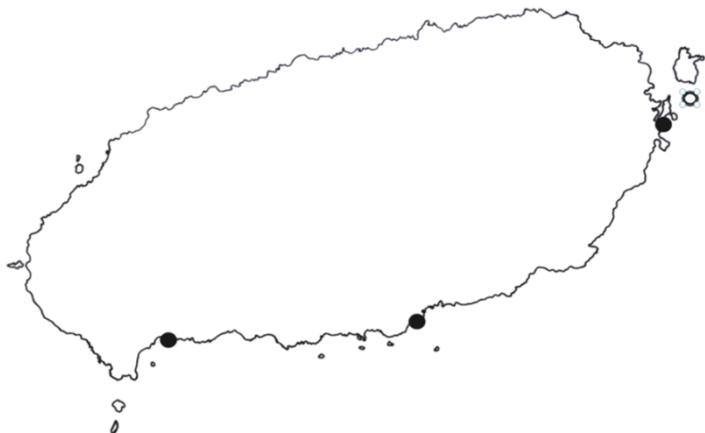

Fig. 133: Distribution of *P. amabilis*

Fig. 134: Distribution of *P. vernicosa*

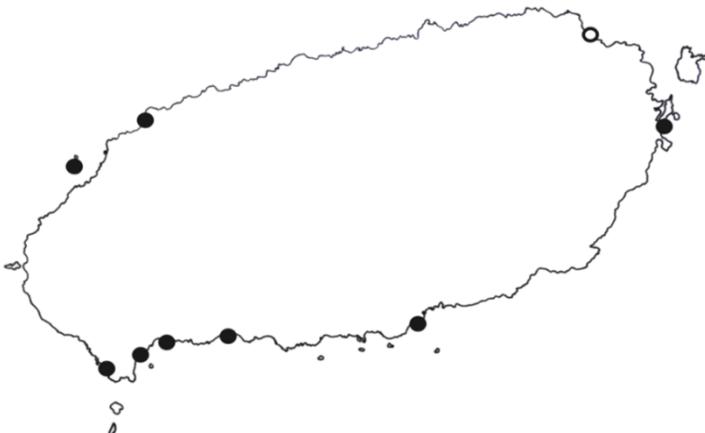

Fig. 135: Distribution of *G. neastartoides*

**REMARKS:** Although some authors have recognized two consistent forms, it appears that only one highly variable species in shape, thickness, color, and ribbing, *G. aequilatera* Sowerby I, 1825, occurs in and around Japanese waters (Huber, 2010). *Gomphina* (*Macridiscus*) *veneriformis* (Lamarck, 1818); *Gomphina melanaegis*, Römer, 1861 are synonyms.

**Genus: *Irus* F. C. Schmidt, 1818**

**195 *Irus irus* (Linnaeus, 1758)**

(Fig. 137)

**ORIGINAL DESCRIPTION:** Linnæus, C. 1758. *Systema naturæ per regna tria naturæ, secundum classes, ordines, genera, species, cum characteribus, differentiis, synonymis, locis.* Tomus I. Editio decima, reformata. Holmiæ. (Salvius). 683. (As *Donax irus* Linnaeus, 1758)  
(Without illustration)

**TYPE LOCALITY:** Mediterranean Sea

**HABITAT:** Nestling or byssally attached in crevices, coral heads, holes in rocks, and also in roots of *Laminaria*, from intertidal zone to depth of 40 m

**GENERAL DISTRIBUTION:** Korea and Japan to Indo-Pacific; Western Europe and Mediterranean to South Africa; **JEJU:** Iho, Hamdeok, Gimnyeong, Wolpyeong, Haengwon, Handong, Sehwa, Hado, Udo (Hagosudong), Udo (Sanhosa), Jongdal-ri, Seongsan, Shinyang, Pyoseon, Bomok, Munseom, Seogundo, Gangjeong, Jungmun, Yerae, Hwasoon, Yongmeori, Sagyei, Songaksan, Hamo, Keumneung, Hyeopjae, Gwakji,

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** *Irus macrophyllus* (Deshayes, 1853) is a synonym.

Fig. 136: Distribution of *G. aequilatera*

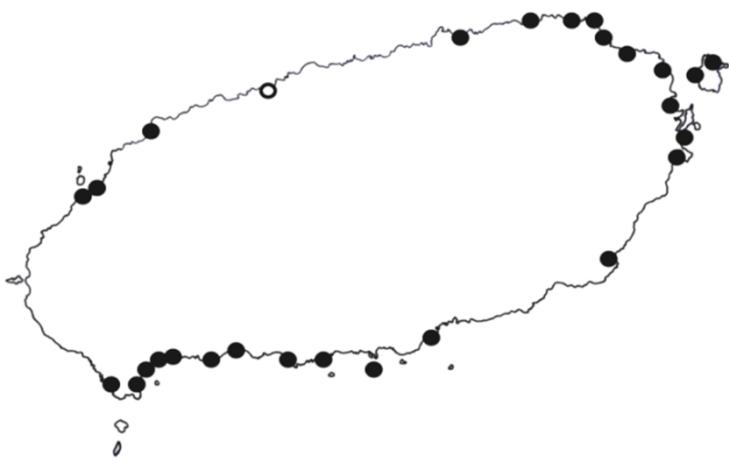

Fig. 137: Distribution of *I. irus*

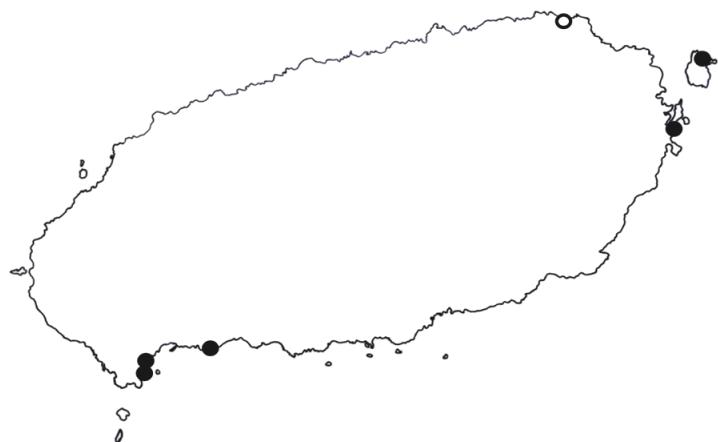

Fig. 138: Distribution of *I. mitis*

**196 *Irus mitis* (Deshayes, 1853)**

(Fig. 138)

**ORIGINAL DESCRIPTION:** Deshayes G.P. 1853. Descriptions of new species of shells in the collection of Mr. Cuming. *Proceedings of the Zoological Society of London*, 21: 5. (As *Venerupis mitis* Deshayes, 1853) (Without illustration)

**TYPE LOCALITY:** Unknown

**HABITAT:** Nestling in holes bored by pholad species in soft rocks, sand, and mudstone, from intertidal zone to depth of 1 m

**GENERAL DISTRIBUTION:** East Sea to East China Sea; **JEJU:** Wolpyeong, Udo (Hagosudong), Seongsan, Yerae, Sagyei, Songaksan

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Similar to *Irus irus* and may be confused with this species; the concentric lamellae are more evenly spaced in *I. irus*.

**197 *Irus ishibashianus* Kuroda and Habe, 1952**

(Fig. 139)

**ORIGINAL DESCRIPTION:** Kuroda, T. and Habe, T. 1952. Checklist and Bibliography of the Recent Marine Mollusca of Japan. L.W. Stach, Tokyo. 21. (As *Irus ishibashianus* Kuroda and Habe, 1952) (Without illustration)

**TYPE LOCALITY:** Yokosuka, Honshu, Japan (fossil and living). (With the introduction of a new name for the species attributed to Linnaeus, this area became the type locality of *I. ishibashianus*.)

**HABITAT:** Nestling in holes in soft rock, mudstone, and coral stones, from intertidal zone to depth of 6 m

**GENERAL DISTRIBUTION:** Eastern Russia to Korea and Japan; **JEJU:** Wolpyeong, Jongdal-ri, Seongsan, Bomok, Munseom, Hwasoon, Sagyei

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-lowboreal

**REMARKS:** Yokoyama (1920) recognized *Venerupis irus*, Linnaeus, 1758 from the Upper Musashino fossil bed, and also redescribed it (Yokoyama, 1924). However, Kuroda and Habe (1952) regarded it as different from Linnaeus' species, and renamed it as *Irus ishibashianus*. *Venerupis irus* Yokoyama, 1920 non Linnaeus, 1758 is a synonym.

**Subfamily: Cyclininae Frizzell, 1936**

**Genus: *Cyclina* Deshayes, 1850**

**198 *Cyclina sinensis* (Gmelin, 1791)**

(Fig. 140)

**ORIGINAL DESCRIPTION:** Gmelin, J. F. 1791. Caroli a Linné, systema naturae. Lipsiae (Leipzig), (Beer). 13. Tom. I. Pars VI. (Vol. 1, part 6) p. 3285. (As *Venus sinensis* Gmelin, 1791) (Without illustration)

**TYPE LOCALITY:** China

**HABITAT:** Muddy sand, from intertidal zone to depth of-20 m

**GENERAL DISTRIBUTION:** Korea and Northern Japan to South China Sea; **JEJU:** Hado, Jongdal-ri, Ojo-ri, Shinyang, Yongmeori, Hamo

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** *C. sinensis* is common, quite variable in shape, and moderately variable in color. It has a radial sculpture, and is usually purplish at the finely denticulate margin. It is a small species, generally 30-40 mm. in length.

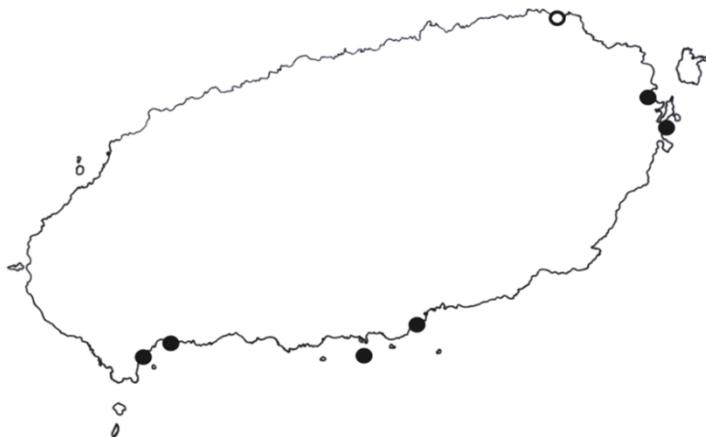

Fig. 139: Distribution of *I. ishibashianus*

Fig. 140: Distribution of *C. sinensis* (●) and *P. habei* (■)

Fig. 141: Distribution of *S. coreanica* (●) and *Paramya recluzi* (■)

**Subfamily: Petricolinae d'Orbigny, 1840**

**Genus: *Petricola* Lamarck, 1801**

**199 *Petricola (Petricola) habei* (Huber, 2010)**

**(Fig. 140)**

**ORIGINAL DESCRIPTION:** Huber M. (2010) Formal description and designation of holotypes for 23 bivalve species and type species for 2 bivalve genera (Mollusca: Bivalvia).

*Conchylia* 41(1): 1-32. (As *Petricola (Petricola) habei* (Huber, 2010))

**TYPE LOCALITY:** Suiken, Wakayama Prefecture

**HABITAT:** Burrowing in soft mudstone and coral debris, from intertidal zone to depth of 20 m

**GENERAL DISTRIBUTION:** Northern Japan to Yellow Sea; **JEJU:** Shinyang (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** Coan (1997, type fig. 9) demonstrated that *Venerupis mirabilis* Deshayes, 1853, described from Monterey, is indeed living in California and a synonym of *Petricola carditoides*. He stated that the species referred to as *P. mirabilis* by Japanese authors was distinct. Coan also considered *Pseudoirus* a synonym of *Petricola*. *Pseudoirus mirabilis* Habe, 1951 non Deshayes, 1853 is here renamed *Petricola (Petricola) habei* (Huber, 2010). *Pseudoirus mirabilis* Habe, 1951 (Honshu) non *Venerupis mirabilis* Deshayes, 1853 is a synonym.

**Order: MYIDA Stoliczka, 1870**

**Superfamily: Myoidea Lamarck, 1809**

**Family: MYIDAE Lamarck, 1809**

**Genus: *Sphenis* Turton, 1822**

**200 *Sphenia coreanica* Habe, 1951**

(Fig. 141)

**ORIGINAL DESCRIPTION:** Habe, T. 1951. Donacidae and Myidae in Japan, In: T. Kuroda, ed., Illustrated Catalogue of Japanese Shells 1 (12): 71-76 (As *Sphenia coreanica* Habe, 1951)

**TYPE LOCALITY:** Ulsan, South Korea

**HABITAT:** Among roots of seaweed on rocks, from intertidal zone to depth of 20m;

**GENERAL DISTRIBUTION:** Southern Korea and Japan to Yellow Sea; **JEJU:** Hwasoon (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-lowboreal

**Genus: *Paramya* Conrad, 1861**

**201 *Paramya recluzi* (A. Adams, 1864)**

(Fig. 141)

**ORIGINAL DESCRIPTION:** Adams, A. 1864. On some new genera and species of Mollusca from the seas of China and Japan. Annals and Magazine of Natural History, 3rd ser. 13, 309. (As *Eucharis recluzi* A. Adams, 1864) (Without illustration)

**TYPE LOCALITY:** Yobuku, Kyushu, Japan

**HABITAT:** Fine sand and sandy mud, in bays, at depth of 5-50 m

**GENERAL DISTRIBUTION:** Korea, Japan and East Sea (western area) to Yellow Sea;

**JEJU:** Hwasoon (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**Family: CORBULIDAE Lamarck, 1918**

**Subfamily: Corbulinae Lamarck, 1818**

**Genus: *Corbula* Bruguière, 1797**

**202 *Corbula (Varicorbula) rotalis* Hinds, 1843**

(Fig. 142)

**ORIGINAL DESCRIPTION:** Hinds, R. B., 1843. On new species of *Corbula* and *Potamomya*. Proceedings of the Zoological Society of London, part 11: 56, 57. (As *Corbula rotalis* Hinds, 1843) (Without illustration)

**TYPE LOCALITY:** Mindoro, Philippines

**HABITAT:** Coarse sand at depth of 20–450 m.

**GENERAL DISTRIBUTION:** East Sea to Tropical West Pacific; **JEJU:** Songsan (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-lowboreal

**REMARKS:** *Varicorbula rotalis* (Reeve, 1843) is a synonym. *Corbula bifrons* A. Adams, 1860, another synonym, has been reported from Korea Strait.

**203 *Corbula (Varicorbula) yokoyamai* (Habe 1949)**

(Fig. 142)

**ORIGINAL DESCRIPTION:** Habe, T. 1949. Illustrated Catalogue of Japanese Shells, 1 (1), p. 2, pl. 1, fig. 5. (As *Varicorbula yokoyamai* Habe, 1949)

**TYPE LOCALITY:** Unavailable

**HABITAT:** Sandy mud at depth of 5–101 m

**GENERAL DISTRIBUTION:** Southern Korea and Japan to East China Sea; North Borneo; **JEJU:** Hwasoon (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

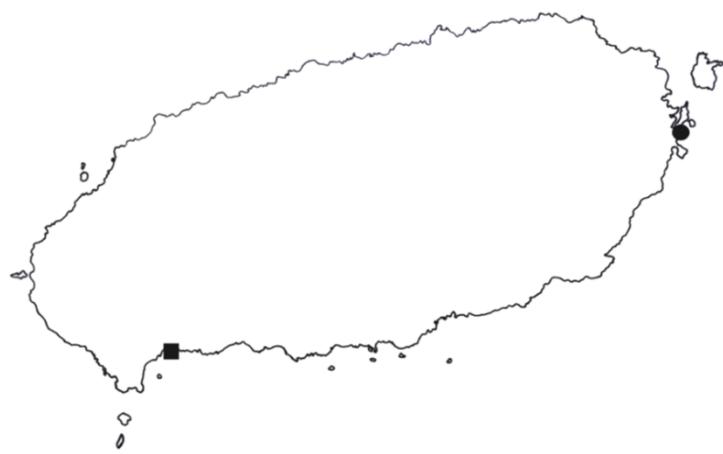

Fig. 142: Distribution of *C. (V.) rotalis* (●) and *C. (V.) yokoyamai* (■)

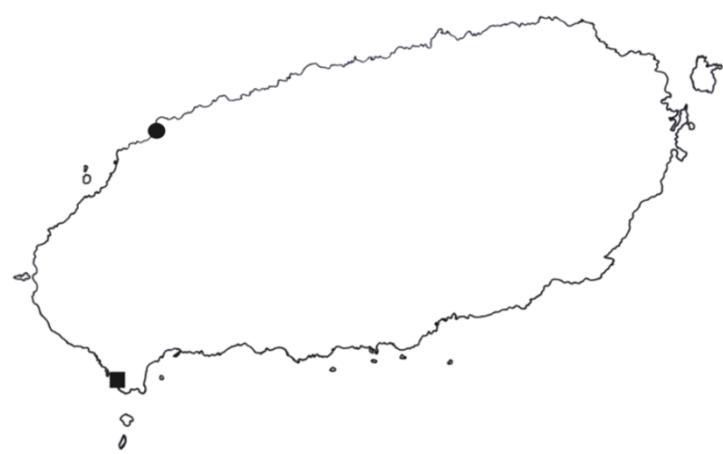

Fig. 143: Distribution of *M. striata* (●) and *Barnea (A.) manilensis* (■)

Fig. 144: Distribution of *T. princessae* (●), *T. malleolus* (■), and *Uperotus clavus* (▲)

## **Superfamily: Pholadoidea Lamarck, 1809**

**Family: PHOLADIDAE Lamarck, 1809**

**Subfamily: Pholadinae Lamarck, 1809**

**Genus: *Barnea* Risso, 1826**

**204 *Barnea (Anchomasa) manilensis* (Philippi, 1847)**

(Fig. 143)

**ORIGINAL DESCRIPTION:** Philippi R.A., 1847. *Testaceorum novorum centuria.*

*Zeitschrift fur Malakozoologie*, 4: 72. (As *Pholas manilensis* Philippi, 1847) (Without illustration)

**TYPE LOCALITY:** Manila, Philippines

**HABITAT:** Boring in soft rocks, hard mud, clay, or shale, from the intertidal zone to depth of 20 m

**GENERAL DISTRIBUTION:** Sakhalin to Yellow Sea; Indo-West Pacific; South Africa;

**JEJU:** Hamo

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** New species record for Jeju Island.

**Subfamily: Martesiinae Grant & Gale, 1931**

**Genus: *Martesia* Sowerby I, 1824**

**205 *Martesia striata* (Linnaeus, 1758)**

(Fig. 143)

**ORIGINAL DESCRIPTION:** Linnæus, C. 1758. *Systema naturæ per regna tria naturæ,*

secundum classes, ordines, genera, species, cum characteribus, differentiis, synonymis, locis.

Tomus I. Editio decima, reformata. Holmiæ. (Salvius). 669. (As *Pholas striata* Linnaeus,

1758) (Without illustration)

**TYPE LOCALITY:** Unknown

**HABITAT:** Boring in old pilings, waterlogged tree trunks, also in driftwood, rarely in soft rocks, from intertidal zone to depth of 20 m

**GENERAL DISTRIBUTION:** Japan to Indo-Pacific; Hawaii; Australia; West Mexico to Peru; North Carolina to Brazil; Western Europe and Mediterranean; South Africa; **JEJU:** Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Worldwide

**REMARKS:** Many specimens, juvenile to adult, burrowed into piece of palm log at Gwakji Beach, Jeju Island.

**Subfamily: Xylophaginae Purchon, 1941**

**Genus: *Xylophaga* Turton, 1822**

**206 *Xylophaga rikuzenica* Taki & Habe, 1945**

**ORIGINAL DESCRIPTION:** Taki, I. & Habe, T. 1945. Classification of the superfamily Pholadacea from Japan. *Venus*, 14 (1-4), 108–117. (As *Xylophaga rikuzenica* Iw. Taki & Habe, 1945)

**TYPE LOCALITY:** Rikuzen Province, Honshu, Japan

**HABITAT:** Boring in wood, at depth of 183-1400 m

**GENERAL DISTRIBUTION:** Korea and Japan to East China Sea; **JEJU:** "Jejudo" (Kwon and Lee, 1993)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** Kwon and Lee (1993) list only "Jejudo", with no specific locality. *Neoxylophaga rikuzenica* (Iw. Taki and Habe, 1945) is a synonym.

**Family: TEREDINIDAE Rafinesque, 1815**

**Subfamily: Teredininae Rafinesque, 1815**

**Genus: *Teredora* Bartsch, 1921**

**207 *Teredora princesae* (Sivickis, 1928)**

(Fig. 144)

**ORIGINAL DESCRIPTION:** Sivickis, P. B. 1928. New Philippine shipworms. Philippine Journal of Science, Manila, 37: 291, pl. 3; fig. 11. (As *Teredo princesae* Sivickis, 1928)

**TYPE LOCALITY:** Philippines

**HABITAT:** Submerged wood

**GENERAL DISTRIBUTION:** Japan to Indo-W. Pacific; E. Pacific; **JEJU:** Sagyei (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**208 *Teredora malleolus* (Turton, 1822)**

(Fig. 144)

**ORIGINAL DESCRIPTION:** Turton, W. 1822, Conchylia Insularum Brittanicae. The Shells of the British Islands, Systematically arranged. Exeter, 255; pl. 2; fig. 19. (As *Teredo malleolus* Turton, 1822)

**TYPE LOCALITY:** Torbay, Devon, England

**HABITAT:** Submerged wood

**GENERAL DISTRIBUTION:** Korea; Atlantic; Mediterranean (Check); **JEJU:** Sagyei (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-lowboreal

**REMARKS:** An eastern Atlantic species, not in Okutani (2000). Specimens in Min (2004) may belong to *T. princesae*.

**Genus: *Uperotus* Guettard, 1770**

**209    *Uperotus clava* (Gmelin, 1791)**

(Fig. 144)

**ORIGINAL DESCRIPTION:** Gmelin, J. F. 1791. Caroli a Linné, systema naturae. Lipsiae (Leipzig), (Beer). 13. Tom. I. Pars VI. (Vol. 1, part 6), p. 3748. (As *Teredo clava* Gmelin, 1791) (Without illustration)

**TYPE LOCALITY:** Tranquebar, Madras, India

**HABITAT:** Submerged wood

**GENERAL DISTRIBUTION:** Korea; Indo-W. Pacific; **JEJU:** Sagyei (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** *Uperotus clavus* (Gmelin, 1791) is a synonym.

**Superfamily: Hiatelloidea Gray, 1824**

**Family: HIATELLIDAE Gray, 1824**

**Genus: *Hiatella* Bosc, 1801**

**210    *Hiatella arctica* (Linnaeus, 1767)**

(Fig. 145)

**ORIGINAL DESCRIPTION:** Linnaeus, C. 1767. Systema naturae sive regna tria naturae, secundum classes, ordines, genera, species, cum characteribus, differentiis, synonymis, locis. Laurentii Salvii, Holmiae. 12th ed. v. 1 (pt 2): 1113. (As *Mya arctica* Linnaeus, 1767) (Without illustration)

**TYPE LOCALITY:** Norway

**HABITAT:** Nestler, living byssally attached in crevices of rocks and other shells, also in subtidal caves, attached to rocks, pebbles, algae or other shells, or nestling in sponges; from intertidal zone to depth of 523 m

**GENERAL DISTRIBUTION:** Korea; Japan; Taiwan; S. E. Asia; Circumarctic; Northeastern North America; Caribbean, Mediterranean; West Africa, South Africa; Uruguay; Chile, Australia; Washington, U. S. A.; **JEJU:** Udo (Geomeollae), Jungmun, Yongmeori, Sagyei

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Worldwide

**REMARKS:** Japanese and Chinese authors usually use *Hiatella orientalis* (Yokoyama, 1920) when referring to this species. Coan *et al.* (2000) stated that full taxonomic understanding of *Hiatella* is a complex problem; there may be more than one species in the genus. "Still lacking an extended analysis and convincing criteria for more than one species, Coan's course is followed" (Huber, 2010). Marshall and Gofas (2015) also accept one species and list more than 60 synonyms!

## Superfamily: Solenoidea Lamarck, 1809

**Family: SOLENIDAE Lamarck, 1809**

**Genus: *Solen* Linnaeus, 1758**

**211 *Solen strictus* Gould, 1861**

(Fig. 146)

**ORIGINAL DESCRIPTION:** Gould, A.A. 1861. Descriptions of shells collected by the North Pacific Exploring Expedition (*continued*). Proceedings of the Boston Society of Natural History 8: 26. (As *Solen strictus* Gould, 1861) (Without illustration)

**TYPE LOCALITY:** Southern Hokkaido, Japan

**HABITAT:** Bays and lagoons; in sand on sandflats, from intertidal zone to depth of 3 m

**GENERAL DISTRIBUTION:** Sea of Okhotsk to East China Sea; **JEJU:** Gimnyeong, Jongdal-ri, Ojo-ri, Pyoseon

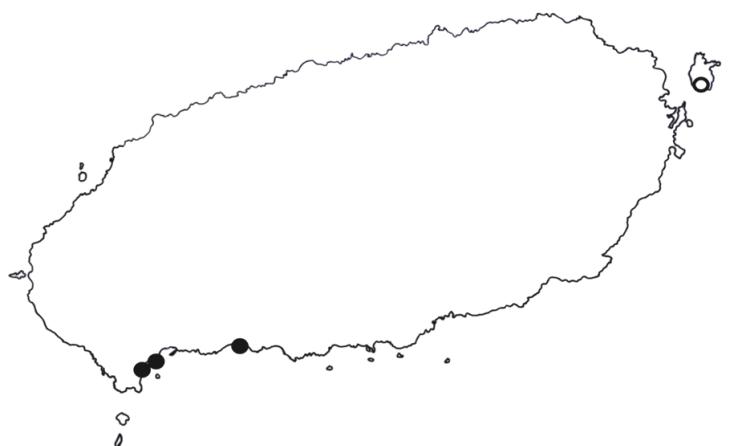

Fig. 145: Distribution of *H. arctica*

Fig. 146: Distribution of *S. strictus*

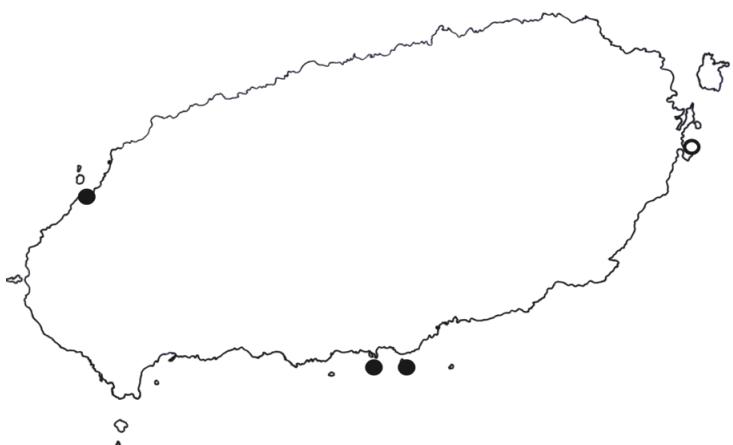

Fig. 147: Distribution of *G. cuneiformis*

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-lowboreal

**REMARKS:** Once moderately common at Ojo-ri (Tongbatarl Lagoon), it has now become quite rare because of over collecting (Lee *et al.*, 2014). *Solen gouldi* Conrad, 1868 is a synonym.

**Superfamily: Gastrochaenoidea Gray, 1840**

**Family: GASTROCHAENIDAE Gray, 1840**

**Genus: *Gastrochaena* Spengler, 1783**

**212 *Gastrochaena cuneiformis* L. Spengler, 1783**

(Fig. 147)

**ORIGINAL DESCRIPTION:** Spengler L. 1783. Beskrivelse over en nye Slægt af toskallede Muskeler, som kan kaldes Gastrochæna, i tre foranderlige Arter, hvoraf hver boer i et forskelligt Ormehuus.. Nye Samling af det Kongelige Danske Videnskabers Selskabs Skrifter : 2: 174-183, pl. 1. (As *Gastrochaena cuneiformis* L. Spengler, 1783)

**TYPE LOCALITY:** Nicobar Islands, Andaman Sea

**HABITAT:** Coral reefs, chemically boring in dead corals (*Porites* sp.) or shells, from intertidal zone to depth of 58 m

**GENERAL DISTRIBUTION:** Japan to Indo-Pacific; Hawaii; **JEJU:** Seopjikoji, Supseom, Munseom, Keumneung

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Found at Keumneung, Jeju Island, in crevices of the encrusting coral *Alveopora japonica* Eguchi, 1968.

**Genus: *Cucurbitula* Gould, 1861**

**213 *Cucurbitula cymbium* (Spengler 1783)**

(Fig. 148)

**ORIGINAL DESCRIPTION:** Spengler L. 1783. Beskrivelse over en nye Slægt af toskallede Muskeler, som kan kaldes *Gastrochaena*, i tre foranderlige Arter, hvoraf hver boer i et forskelligt Ormehuus.. Nye Samling af det Kongelige Danske Videnskabers Selskabs Skrifter : 2: 174-183, pl. 1. (As *Gastrochaena cymbium* Spengler, 1783)

**TYPE LOCALITY:** Tranquebar, Southeastern India

**HABITAT:** Calcareous igloo-tube containing the shell fixed to other shells (*Pecten*, *Corbula*) or sand-dollars, at depth of 2-91 m

**GENERAL DISTRIBUTION:** Southern Korea and Japan to Indo-West Pacific; Mediterranean; **JEJU:** Udo, Supjikoji, Hwasoon (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** *Cucurbitula cymbium* has a unique habitat and characteristically quadrangular, widely open valves. In *Cucurbitula* the valves occupy about 2/3 of the space. *Gastrochaena* (*Cucurbitula*) *cymbium* (Spengler, 1783) is a synonym.

**Order: ANOMALODESMATA Dall, 1889**

**Superfamily: Myochamoidea Carpenter, 1861**

**Family: MYOCHAMIDAE Carpenter, 1861**

**Genus: *Myadora* Gray, 1840**

**214 *Myadora fluctuosa* Gould, 1861**

(Fig. 149)

**ORIGINAL DESCRIPTION:** Gould, A.A. 1861. *Descriptions of shells collected by the North Pacific Exploring Expedition (continued)*. Proceedings of the Boston Society of

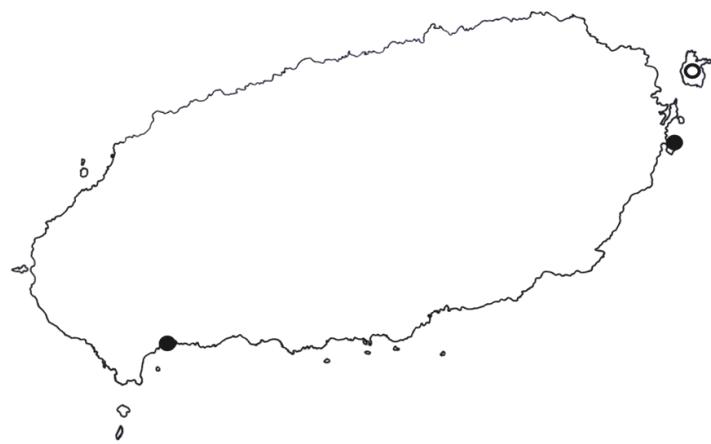

Fig. 148: Distribution of *C. cymbium*

Fig. 149: Distribution of *M. fluctosa* (●) and *Hunkydora soyoae* (■)

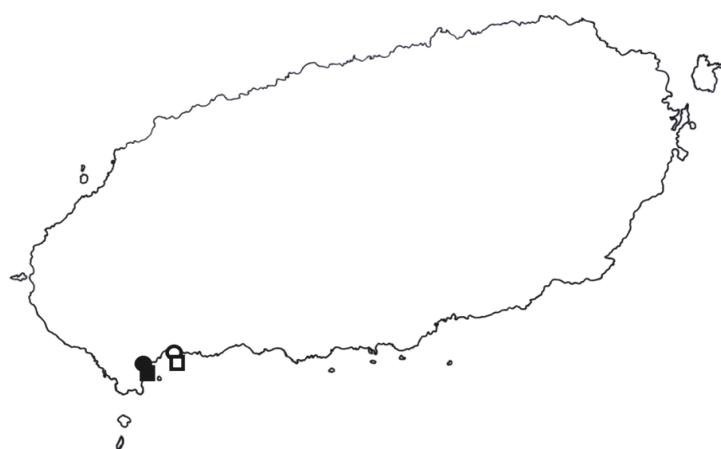

Fig. 150: Distribution of *M. transmontana* (●), and *M. dissimilis* (■)

Natural History 8: 23. (Holotype figured in Johnson (1964) (As *Myodora fluctuosa* A. A. Gould, 1861)

**TYPE LOCALITY:** Kagoshima Bay, Kyushu, Japan

**HABITAT:** Fine sand and mud, at depth of 10-990m

**GENERAL DISTRIBUTION:** East Sea to East China Sea; **JEJU:** Hwasoon, Sagyei

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** Species of *Myadorea* are quite variable, as can be seen in *M. fluctuosa*.

*Myadorea japonica* Habe, 1950 is a synonym.

**Genus: *Hunkydora* Fleming, 1948**

**215 *Hunkydora soyaoe* (Habe 1950)**

(Fig. 149)

**ORIGINAL DESCRIPTION:** Habe, T. 1950. Myochamidae in Japan. Illustrated Catalogue of Japanese Shells (4): 25-30, 1 pl. (As *Myadorea soyaoe* Habe, 1950)

**TYPE LOCALITY:** Bungo Strait, southern Japan

**HABITAT:** Coarse sand and stones, at depths of 50–300 m

**GENERAL DISTRIBUTION:** Southern Korea and southern Japan to East China Sea; **JEJU:** Hwasoon, Sagyei

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** Beu (2006) has placed this species in the genus *Hunkydora* Fleming, 1948, due to differences in the resilifer and pallial sinus (Fleming, 1948).

**Genus: *Myadoropsis* Habe, 1960**

**216 *Myadoropsis transmontana* (M. Yokoyama 1922)**

(Fig. 150)

**ORIGINAL DESCRIPTION:** Yokoyama, M. 1922. Fossils from the Upper Musashino of Kazusa and Shimosa. Journal of the College of Science, Tokyo Imperial University, 44, 172, pl. 14, figs. 13, 14 (As *Thracia transmontana* Yokoyama, 1922)

**TYPE LOCALITY:** Unknown

**HABITAT:** Sand, at depth of 10-300 m

**GENERAL DISTRIBUTION:** Korea; Japan; E. Sea; **JEJU:** Hwasoon, Sagyei (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** *Myadropsis transmontana* (Yokoyama, 1922) (Min, 2004) is a misspelling.

**217 *Myadoropsis dissimilis* Habe, 1960**

(Fig. 150)

**ORIGINAL DESCRIPTION:** Habe T. 1960. New species of molluscs from the Amakusa Marine Biological Laboratory, Reihoku-cho, Amakusa, Kumamoto Pref., Japan. Publications of the Seto Marine Biological Laboratory 8(2): 293. (As *Myadoropsis dissimilis* Habe, 1960)  
(Without illustration)

**TYPE LOCALITY:** Western Kyushu, Japan

**HABITAT:** Fine sand, at depth of 10-30 m

**GENERAL DISTRIBUTION:** Southern Korea and southern Japan; **JEJU:** Hwasoon, Sagyei (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** *Myadropsis dissimilis* Habe, 1960 (Min, 2004) is a misspelling.

**218 *Myadoropsis brevispinosa* T. Habe, 1962**

(Fig. 151)

**ORIGINAL DESCRIPTION:** Habe, T. 1962 *Myadoropsis brevispinosus* Habe. 1962. Colored Illustrations of the Shells of Japan, 2 (ed. 2), 142-143, app. 46, pl. 64, fig. 8. (As *Myadoropsis brevispinosa* Habe, 1962)

**TYPE LOCALITY:** Western Kyushu, Japan

**HABITAT:** Fine sand, at depth of 10-300 m;;

**GENERAL DISTRIBUTION:** East Sea to Southern Japan; **JEJU:** Hwasoon, Sagyei (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** *Myadropsis brevispinosa* Habe, 1962 (Min, 2004) is a misspelling.

### **Superfamily: Pandoroidea Rafinesque, 1815**

**Family: PANDORIDAE Rafinesque, 1815**

**Genus: *Pandora* Bruguière, 1797**

#### **219 *Pandora otukai* Habe, 1952**

(Fig. 151)

**ORIGINAL NAME:** Habe, T. 1952. Pholadomyidae, Clavagellidae, Pandoridae, Juliidae, and Condylocardiidae in Japan. In: Kuroda, T. (ed.) Illustrated Catalogue of Japanese Shells 1(18): 121-129. (As *Pandora otukai* Habe, 1952)

**TYPE LOCALITY:** Unavailable

**HABITAT:** Fine sand, at depths of 10-300 m

**GENERAL DISTRIBUTION:** Southern Korea and Japan to northeastern China; **JEJU:** Seongsan (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-lowboreal

**REMARKS:** Huber (2010) doubts the usefulness of subgeneric separation in the Pandoridae.

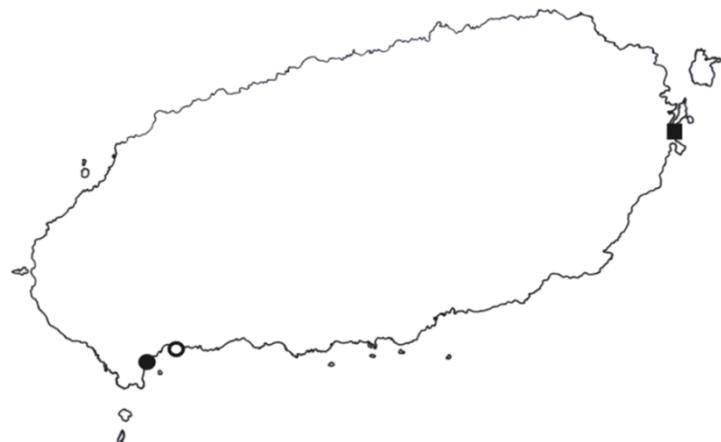

Fig. 151: Distribution of *M. brevispinosa* (●) and *Pandora otukai* (■)

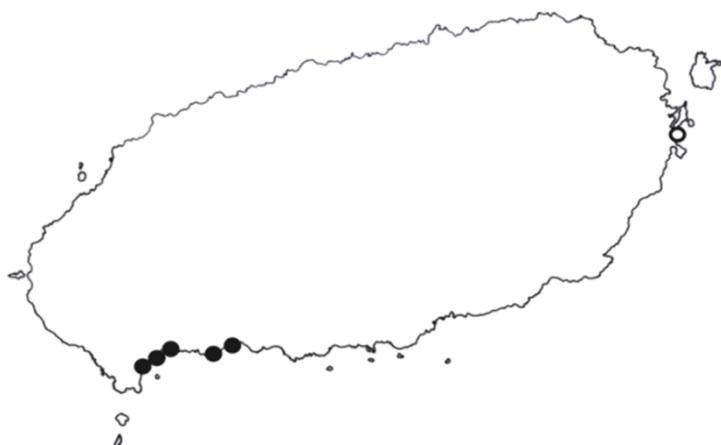

Fig. 152: Distribution of *E. navicula*

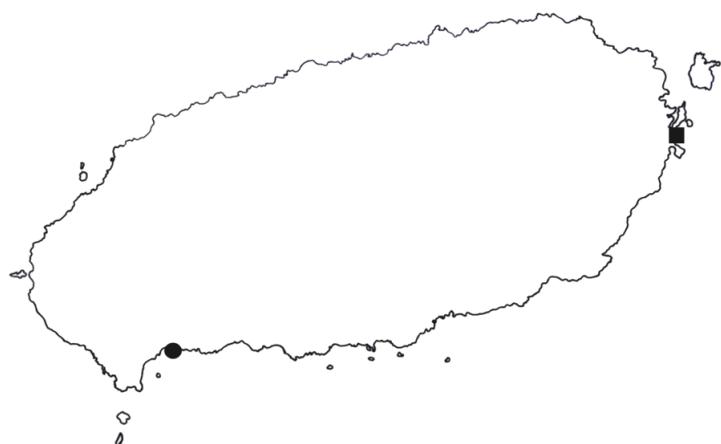

Fig. 153: Distribution of *T. pusilla* (●) and *Parvithracia (Pseudoasthenothaerus) sematana* (■)

*Pandora (Pandorella) otukai* T. Habe, 1952 is a synonym.

**Family: LYONSIIDAE P. Fischer, 1887**

**Genus: *Entodesma* Philippi, 1845**

**220 *Entodesma navicula* (Adams & Reeve 1850)**

(Fig. 152) (Plate 7: G-J)

**ORIGINAL DESCRIPTION:** Adams, A. & Reeve, L. 1850. Mollusca in The Zoology of the Voyage of H.M.S. Samarang, under the command of Captain Sir Edward Belcher, C. B., F. R. A. S., F. G. S., during the years 1843-1846. Edited by Arthur Adams. London: Reeve and Benham, 1848-1850. i-x, 83, pl. 23, fig. 11, (As *Lyonsia navicula* Adams and Reeve, 1850)

**TYPE LOCALITY:** Borneo

**HABITAT:** Nestling in rock crevices and coarse rubble, and in kelp holdfasts, from intertidal zone to depth of 60 m

**GENERAL DISTRIBUTION:** Bering Sea to Yellow Sea; Alaska to California; New Zealand (introduced); **JEJU:** Seongsan, Jungmun, Yerae, Hwasoon, Yongmeori, Sagyei

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Widely distributed boreal

**REMARKS:** Holotype is figured in Lutaenko and Noseworthy (2012). *Agriodesma navicula* (Adams and Reeve, 1850) is a synonym.

**Superfamily: Thracioidea Stoliczka, 1870**

**Family: THRACIIDAE Stoliczka, 1870**

**Subfamily: Asthenothaerinae P. Fischer, 1887**

**Genus: *Trigonothracia* Yamamoto & Habe, 1959**

**221 *Trigonothracia pusilla* (Gould, 1861)**

(Fig. 153)

**ORIGINAL DESCRIPTION:** Gould, A.A. 1861. Descriptions of shells collected by the North Pacific Exploring Expedition (*continued*). Proceedings of the Boston Society of Natural History 8: 23. (As *Thracia pusilla* Gould, 1861) (Without illustration)

**TYPE LOCALITY:** Shimoda, Honshu, Japan

**HABITAT:** Bays; fine sand, sandy mud and silty-clay substrate, at depth of 7–80 m

**GENERAL DISTRIBUTION:** Southern Korea and Japan to Yellow Sea; **JEJU:** Hwasoon (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**Genus:** *Parvithracia* Finlay, 1926

**222 *Parvithracia (Pseudoasthenothaerus) sematana* (Yokoyama 1922)**

(Fig. 153)

**ORIGINAL DESCRIPTION:** Yokoyama, M. 1922. Fossils from the Upper Musashino of Kazusa and Shimosa. Journal of the College of Science, Tokyo Imperial University, 44, 173, pl. 14; figs. 17, 18. (As *Thracia sematana* Yokoyama, 1922)

**TYPE LOCALITY:** Shito, eastern Japan (fossil)

**HABITAT:** Fine sand, at depth of 20-300 m

**GENERAL DISTRIBUTION:** East Sea to Yellow Sea; **JEJU:** Songsan (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** *Asthenothaerus sematana* (Yokoyama, 1922) is a synonym.

**Superfamily: Cuspidarioidea Dall, 1886**

**Family: CUSPIDARIIDAE Dall, 1886**

**Subfamily: Cuspidariinae Dall, 1886**

**Genus: *Cardiomya* A. Adams, 1864**

**223 *Cardiomya kashimana* Okutani and Sakura, 1964**

(Fig. 154)

**ORIGINAL DESCRIPTION:** Okutani, T. & K. Sakurai. 1964. Genus *Cardiomya* (Mollusca, Lamellibranchiata) from Japanese waters. Bulletin of the National Science Museum, Tokyo, 7 (1) 20, pl. 1. (As *Cardiomya kashimana* Okutani and Sakura, 1964)

**TYPE LOCALITY:** Ibaraka, Southern Hokkaido

**HABITAT:** Sandy mud at depth of 100–1030 m

**GENERAL DISTRIBUTION:** Korea and Japan; **JEJU:** Hwasoon (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-lowboreal

**Genus: *Plectodon* Carpenter, 1865**

**224 *Plectodon ligula* (Yokoyama 1922)**

(Fig. 154)

**ORIGINAL DESCRIPTION:** Yokoyama, M. (1922) Fossils from the Upper Musashino of Kazusa and Shimosa. Journal of the College of Science, Tokyo Imperial University, 44, 169, pl. XIV, figs.3,4. (As *Cuspidaria ligula* (M. Yokoyama 1922)

**TYPE LOCALITY:** Shito (fossil), Chiba Prefecture, Japan

**HABITAT:** Sandy mud at depth of 10–300 m

**GENERAL DISTRIBUTION:** Northern Japan to East China Sea; **JEJU:** Hwasoon (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** The placement of this species in *Plectodon* has been questioned (Marshall, 2002). However, according to Huber (2010), the extant Japanese species taken to represent Yokoyama's fossil is minutely granulate, and as such correctly placed here. *Plectodon ligulus*

(Yokoyama, 1922 is a synonym.

**Superfamily: Poromyoidea Dall, 1886**

**Family: POROMYIDAE Dall, 1886**

**Genus: *Poromya* Forbes, 1844**

**225 *Poromya flexuosa* Yokoyama, 1922**

**(Fig. 154)**

**ORIGINAL DESCRIPTION:** Yokoyama, M., 1922a: Fossils from the upper Musashino of Kazusa and Shimosa. Journal of the College of Science, Imperial University of Tokyo, vol. 44, art. 1, 173, pl. 14, figs. 15, 16. (As *Poromya flexuosa* Yokoyama, 1922)

**TYPE LOCALITY:** Shito, Chiba Prefecture, Japan

**HABITAT:** Fine sand and sandy mud, at depth of 20-350 m

**GENERAL DISTRIBUTION:** East Sea to South China Sea; **JEJU:** Seongsan (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

Fig. 154: Distribution of *C. kashimana* (●), *Plectodon ligula* (■), and *P. flexuosa* (▲)

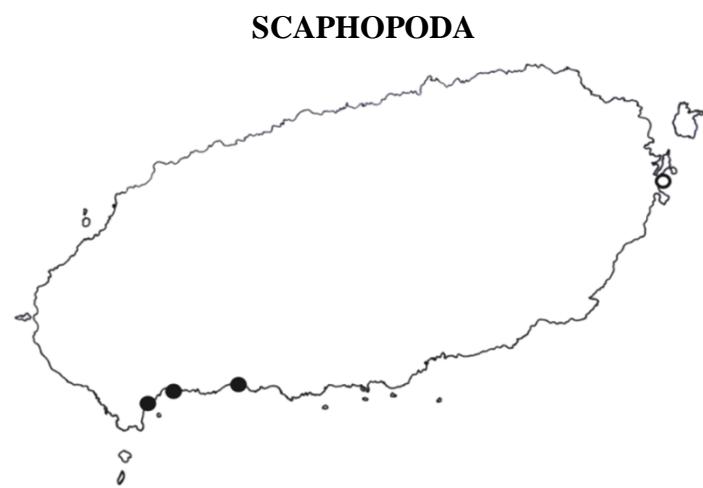

Fig. 1: Distribution of *D. buccinulum*

Fig. 2: Distribution of *A. tibana*

## **CLASS: SCAPHOPODA Bronn, 1862**

### **Order: DENTALIIDAE da Costa, 1776**

**Family: DENTALIIDAE Children, 1834**

**Genus: *Dentalium* Linnaeus, 1758**

#### **1 *Dentalium buccinulum* Gould, 1859**

**(Fig. 1)**

**ORIGINAL DESCRIPTION:** Gould, A. A. 1859. Descriptions of shells collected by the North Pacific Exploring Expedition. Proceedings of the Boston Society of Natural History 7: 166. (As *Dentalium buccinulum* Gould, 1859) Without illustration.

**TYPE LOCALITY:** Kagoshima, Kyushu, Japan

**HABITAT:** Sand, from intertidal zone to depth of 50 m

**GENERAL DISTRIBUTION:** Korea and Japan to China and Indo-Pacific; **JEJU:** Seongsan, Jungmun, Hwasoon, Sagyei

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** Lectotype in USNM; paralectotypes in MCZ (Steiner and Kabat (2004)). *Graptacme buccinula* (Gould, 1859); *Dentalium (Paradentalium) buccinulum* Gould, 1859 are synonyms.

**Genus: *Antalis* H. And A. Adams, 1854**

#### **2 *Antalis tibana* (Nomura, 1940)**

**(Fig.2)**

**ORIGINAL DESCRIPTION:** Nomura, S. 1940. Mollusca dredged by the Husa-Maru from the Pacific coast of Tiba Prefecture, Japan. Records of the Oceanographic Works in Japan 12 (1): 101, 102, pl. 1, fig. 11 (As *Dentalium tibanicum* Nomura, 1940)

**TYPE LOCALITY:** East of Cape Inubozaki, Honshu, Japan; Husa-Maru station 15, 40 m.

**HABITAT:** Fine sand bottom at depth of 10-200 m.

**GENERAL DISTRIBUTION:** Korea and Japan to Indonesia and Vanuatu; **JEJU:**, Samyang, Seongsan, Hwasoon

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Syntypes in SHM (Steiner and Kabat, 2004).

**Genus: *Striodentalium* Habe, 1964**

**3 *Striodentalium tosaensis* (Habe, 1963)**

(Fig. 3)

**ORIGINAL DESCRIPTION:** Habe, T. 1963. A classification of the scaphopod molluscs found in Japan and its adjacent areas. Bulletin of the National Science Museum Tokyo 6 (3): 264, pl. 38, fig. 2. (As *Antalis tosaensis* Habe, 1963)

**TYPE LOCALITY:** Off Tosa Bay, Shikoku, Japan, 200 m.

**HABITAT:** Mud, at depth of 200-620 m

**GENERAL DISTRIBUTION:** Korea and S. Japan to Indo-Pacific; **JEJU:** Seongsan (Min et al., 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** Holotype and paratype in NSMT (Steiner and Kabat, 2004).

**4 *Striodentalium rhabdotum* (Pilsbry, 1905)**

(Fig. 3)

**ORIGINAL DESCRIPTION:** Pilsbry, H. A. 1905. New Japanese Marine Mollusca. Proceedings of the Academy of Natural Sciences of Philadelphia 57: 116, 117, pl. 5, figs 45-47. (As *Dentalium rhabdotum* Pilsbry, 1905)

**TYPE LOCALITY:** Heda, Izu, Honshu, Japan.

**HABITAT:** Mud, at depth of 61-1350 m

**GENERAL DISTRIBUTION:** Korea and Japan to E. China Sea and New Caledonia; **JEJU:** Seongsan (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** “Syntypes in ANSP. Scarabino (1995: 240) stated that ANSP 88319 was the “holotype” but there are two syntypes in that lot, so Scarabino’s statement does not constitute a valid lectotype designation” (Steiner and Kabat, 2004).

## **Order: GADILIDA Starobogatov, 1974**

Suborder: Entalimorpha Steiner, 1992

**Family:** ENTALINIDAE Chistikov, 1979

**Subfamily:** Entalininae Chistikov, 1979

**Genus:** *Entalina* Monterosato, 1872

### **5   *Entalina mirifica* (E.A. Smith, 1895)**

(Fig. 4)

**ORIGINAL DESCRIPTION:** Smith, E. A. 1895. Natural history notes from H.M. Indian marine survey steamer Investigator, Commander C. F. Oldham, R.N. Series II, No. 19. Report upon the Mollusca dredged in the Bay of Bengal and the Arabian Sea during the season 1893-94. Annals and Magazine of Natural History (series 6) 16: 9, pl. 2, fig. 1. (As *Dentalium mirificum* E. A. Smith, 1895)

**TYPE LOCALITY:** Off Trincomalee, Ceylon (Sri Lanka)

**HABITAT:** Sand and rubble from depth of 55-2050 m

**GENERAL DISTRIBUTION:** Japan to Tropical W. Pacific (New Caledonia); Africa;

Fig. 3: Distribution of *S. tosaensis* (●) and *S. rhabdotum* (■)

Fig. 4: Distribution of *E. mirifica*

Fig. 5: Distribution of *E. intercostata* (●), *Megaentalina cornucopiae* (■), and  
+  
*Siphonodentalium isaotakii* (▲)+

**JEJU:** Seogwipo, Hwasoon, Seongsan

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Lectotype in BMNH (Steiner and Kabat, 2004).

**Subfamily: Heteroschismoidinae Chistikov, 1982**

**Genus: *Entalinopsis***

**6 *Entalinopsis intercostata* (Boissevain, 1906)**

(Fig. 5)

**ORIGINAL DESCRIPTION:** Boissevain, M. 1906. The Scaphopoda of the Siboga Expedition, treated together with the known Indo-Pacific Scaphopoda. Uitkomsten op Zoologisch, Botanisch, Oceanographisch en Geologisch Gebied verzameld in Nederlandsch Oost-Indië 1899-1900 aan boord H.M. Siboga onder commando van Luitenant ter zee 1e. kl. G. F. Tydeman 54 (Livraison 32): 14, pl. 6, fig. 4, text-fig. 11. (As *Dentalium intercostatum* Boissevain, 1906)

**TYPE LOCALITY:** Ceram Sea, Indonesia

**HABITAT:** In fine sand, at depth of 50-1500 m

**GENERAL DISTRIBUTION:** Korea and Japan to Indonesia; **JEJU:** Seongsan (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** “Lamprell & Healy (1998: 48) considered *Dentalium intercostatum* to be a junior synonym of *Dentalium thetidis* Hedley, 1903 (currently in the genus *Striodentalium*), thus rejecting Habe’s assignment of this species to *Entalinopsis*.“ Lectotype and paralectotypes in ZMA (Steiner and Kabat, 2004).

Suborder: Gadilimorpha Steiner, 1992

**Family: GADILIDAE Stoliczka, 1868**

**Subfamily Siphonodentaliinae Simroth, 1894**

**Genus: *Siphonodentalium* M. Sars, 1859**

**7 *Siphonodentalium isaotakii* Habe, 1953**

(Fig. 5)

**ORIGINAL DESCRIPTION:** Habe, T. 1953. Genera of Japanese Shells. Pelecypoda and Scaphopoda. Tokyo 4: 299. (As *Siphonodentalium isaotakii* Habe, 1953) (Without illustration?)

**TYPE LOCALITY:** Tokyo Bay, Honshu, Japan

**HABITAT:** Mud bottoms in embayments, at depth of 5-30 m

**GENERAL DISTRIBUTION:** Korea and Japan to Indo-Pacific; **JEJU:** Hwasoon (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** Holotype in NSMT; paratypes in NSMT, and AMNH (Steiner and Kabat, 2004)..

**Subfamily: Gadilinae, Stoliczka, 1868**

**Genus: *Megaentalina* Habe, 1963**

**8 *Megaentalina cornucopiae* (Boissevain, 1906)**

(Fig. 5)

**ORIGINAL DESCRIPTION:** Boissevain, M. 1906. The Scaphopoda of the Siboga Expedition, treated together with the known Indo-Pacific Scaphopoda. Uitkomsten op Zoologisch, Botanisch, Oceanographisch en Geologisch Gebied verzameld in Nederlandsch Oost-Indië 1899-1900 aan board H.M. Siboga onder commando van Luitenant ter zee 1e. kl.

G. F. Tydeman 54 (Livraison 32): 63, 64, pl. 6, fig. 89, text-fig. 30. (As *Entalina cornucopiae* Boissevain, 1906.

**TYPE LOCALITY:** Indonesia

**HABITAT:** Fine sand, at depth of 200-3250 m

**GENERAL DISTRIBUTION:** Korea and S. Japan to Indonesia; **JEJU:** Hwasoon (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Holotype in ZMA (Steiner and Kabat, 2004).

## **Class: CEPHALOPODA Cuvier, 1795**

Subclass: COLEOIDEA Bather, 1888

### **Order: SEPIIDA Zittel, 1895**

**Family: SEPIIDAE Leach, 1817**

**Genus: *Metasepia* Hoyle, 1885**

#### **1 *Metasepia tullbergi* (Appellöf, 1886)**

**ORIGINAL DESCRIPTION:** *Sepia tullbergi* Appellöf, 1886, *Svenska Vetenskaps-Akademiens Handlingar*, 21(13): 26 (As *Sepia tullbergi* Appellöf, 1886).,

**TYPE LOCALITY:** Nagasaki, Japan

**HABITAT:** Sandy to muddy substrate on continental shelf, at depth of 20 to 100 m

**GENERAL DISTRIBUTION:** Korea, southern Japan, and Yellow Sea to Gulf of Thailand;

**JEJU:** "Jejudo" (Jereb and Roper, 2005)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Jereb and Roper (2005) include Jejudo in their distribution map for this species.

Provisionally regarded as part of Jeju Island fauna.

**Genus: *Sepia* Linnaeus, 1758**

#### **2 *Sepia esculenta* Hoyle, 1885**

(Fig. 1)

**ORIGINAL DESCRIPTION:** Hoyle, W. E. 1885, Diagnoses of new Species of Cephalopoda collected during the Cruise of H.M. S. 'Challenger.'—Part II. The Decapoda. *Annals and Magazine of Natural History*, (Series 5) 16: 188-189. (As *Sepia esculenta* Hoyle, 1885) (Without illustration)

**TYPE LOCALITY:** Japan

**HABITAT:** On sand, sometimes burrowing into the substrate at depth from 10 to 100 m.

**GENERAL DISTRIBUTION:** Korea and Southern Japan to South China Sea, and possibly Singapore and western Indonesia; **JEJU:** Dong-gwi, Seongsan, Pyoseon

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Most common sepiid in Jeju Island. *Sepia (Platysepio) esculenta* Hoyle, 1885 is a synonym.

### 3 *Sepia lorigera* Wülker, 1910

**ORIGINAL DESCRIPTION:** Wülker, 1910, *Abhandlungen der mathematische-physikalische Klasse der Königlich Bayerischen Akademie der Wissenschaften*, 3(Suppl. 1): 12 (As *Sepia lorigera* Wülker, 1910)

**TYPE LOCALITY:** Misaki, Japan

**HABITAT:** Depth range from 100 to 300 m.

**GENERAL DISTRIBUTION:** Southern Korea and southern Japan to Vietnam; **JEJU:** "Jejudo" (Jereb and Roper, 2005)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Reported from the southwest coast of the Korean mainland (The World's Marine Life, 2009). Jereb and Roper (2005) include Jejudo in their distribution map for this species. Provisionally regarded as part of Jeju Island fauna

### 4 *Sepia lycidas* Gray, 1849

**ORIGINAL DESCRIPTION:** Gray, 1849. *Catalogue of the Mollusca in the British Museum. Part I. Cephalopoda Antepedia*, 103 (As *Sepia lycidas* Gray, 1849) (Without illustration)

**CEPHALOPODA**

Fig. 1: Distribution of *S. esculenta*

Fig. 2: Distribution of *S. peterseni* (●) and *S. kobiensis* (■)

Fig. 3: Distribution of *S. longipes* (●), *S. tenuipes*, (■) and *Euprymna morsei* (▲)

**TYPE LOCALITY:** Guangzhou, China

**HABITAT:** *Sepia lycidas* is a neritic demersal species with a depth range of 15 to 100 m.

**GENERAL DISTRIBUTION:** Korea, southern Japan, and Yellow Sea to Indonesia and Andaman Sea, Eastern Indian Ocean; **JEJU:** "Jejudo" (Jereb and Roper, 2005)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Jereb and Roper (2005) include Jejudo in their distribution map for this species; Min (2004), records it from the Korean mainland. Provisionally regarded as part of Jeju Island fauna

## 5 *Sepia peterseni* Appellöf, 1886

(Fig. 2)

**ORIGINAL DESCRIPTION:** Appellöf, A. 1886, Japanska Cephalopoder. *Svenska Vetenskaps-Akademiens Handlingar*, 21(13): 23, Pl. 2, figs. 1-6; pl. 3, fig. 21 (As *Sepia peterseni* Appelhof, 1886)

**TYPE LOCALITY:** Japan

**HABITAT:** Inner continental shelf at depth from 20 to 100 m.

**GENERAL DISTRIBUTION:** Korea; Japan; **JEJU:** Seongsan, Pyoseon, Sagyei

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** *Sepia (Doratosepion) peterseni* Appelhof, 1886 is a synonym.

## 6 *Sepia kobiensis* Hoyle, 1885

(Fig. 2)

**ORIGINAL DESCRIPTION:** Hoyle, W. E. 1885, Diagnoses of new Species of Cephalopoda collected during the Cruise of H.M. S. 'Challenger.'—Part II. The

Decapoda. *Annals and Magazine of Natural History*, (series 5) 16: 195-196. (As *Sepia kobiensis* Hoyle, 1885) (Without illustration)

**TYPE LOCALITY:** Bay of Kobe, Honshu, Japan

**HABITAT:** Occurs from subtidal zone to depth of 200 m.

**GENERAL DISTRIBUTION:** Korea and Japan to Indo-West Pacific; **JEJU:** Samyang, "Jejudo" (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** *Sepia kobiensis* is probably a species complex (Jereb and Roper, 2005). *Sepia (Doratosepion) kobiensis* Hoyle, 1885 is a synonym.

## 7 *Sepia longipes* Sasaki, 1914

(Fig. 3)

**ORIGINAL DESCRIPTION:** Sasaki, M. 1913, Decapod cephalopods in Japan. *Doubutsugaku Zasshi* [Zoological Magazine, Tokyo] 25(292): 78 (As *Sepia longipes* Sasaki, 1914) (Illustration?)

**TYPE LOCALITY:** Choshi, Ibaraki Prefecture (Chiba Peninsula), Japan

**HABITAT:** Depth from 100 to 300 m

**GENERAL DISTRIBUTION:** Southern Japan to E. China Sea; **JEJU:** Pyoseon, Hwasoon

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** *Sepia (Doratosepion) longipes* Sasaki, 1913 is a synonym.

## 8 *Sepia tenuipes* Sasaki, 1929

(Fig. 3)

**ORIGINAL DESCRIPTION:** Sasaki, M. (1929), "A Monograph of the dibranchiate cephalopods of the Japanese and adjacent waters," Journal of the College of Agriculture,

Tohoku Imperial University, Sapporo, 20 (supplement 10): 193. (As *Sepia tenuipes* Sasaki, 1929) (Illustration ?)

**TYPE LOCALITY:** Isohama, Ibaraki Prefecture, Japan

**HABITAT:** Depth of 100 to 250 m.

**GENERAL DISTRIBUTION:** East Sea to East China Sea; **JEJU:** Seongsan, Sagyei

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical-lowboreal

**REMARKS:** *Sepia (Doratosepion) tenuipes* Sasaki, 1929 is a synonym.

### **Order: SEPIOLIDA Fioroni, 1981**

**Family: SEPIOLIDAE Leach, 1817**

**Genus: *Euprymna* Steenstrup, 1887**

#### **9 *Euprymna morsei* (Verrill, 1881)**

(Fig. 3)

**ORIGINAL DESCRIPTION:** Verrill, A. E. 1881. The Cephalopods of the Northeastern Coast of North America. *Transactions of the Connecticut Academy of Sciences*, 5(6): 417. (As *Inioteuthis morsei* Verrill, 1881) (Without illustration)

**TYPE LOCALITY:** Tokyo Bay, Japan

**HABITAT:** Pelagic; neritic zone

**GENERAL DISTRIBUTION:** Korea and Japan to Indo-West Pacific; **JEJU:** Hwasoon (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Verrill (1881) described a new genus and a new species from Japan, and reported on another, in a footnote to his North American monograph.

## **Order: MYOPSIDA Naef, 1916**

**Family: LOLIGINIDAE Lesueur, 1821**

**Genus: *Sepioteuthis* Blainville, 1824**

### **10 *Sepioteuthis lessoniana* Ferussac, 1831, in Lesson, 1830–1831**

**ORIGINAL DESCRIPTION:** Féruccac A. E. J. P. J. F. d'Audebard de. 1831. *in Lesson, R.P. 1830–1831. Mollusques, Anellides et Vers. In: Voyage autour du monde sur la corvette de la Majeste, la Coquille, pendant les années 1822–1825 sous le commandement du capitaine Duperrey. Paris, Zoologie, 2(1): 241 (As *Sepioteuthis lessoniana* Ferussac, 1831, in Lesson, 1830–1831) (Illustration Pl. 11)*

**TYPE LOCALITY:** Unknown

**HABITAT:** Occurs from the surface to about 100 m depth; rather common in coastal environments on sea grass beds, coral reefs and sandy bottoms.

**GENERAL DISTRIBUTION:** Northern Japan to Indo-West-Pacific; New Zealand; **JEJU: "Around Jejudo"** (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Both morphological and molecular evidence indicate that *S. lessoniana* may be a complex of cryptic species, and a number of “types” are morphologically distinct, even in hatchlings. (Jereb and Roper, 2010).

**Genus: *Heterololigo* Natsukari, 1984**

### **11 *Heterololigo bleekeri* (Keferstein, 1866)**

**ORIGINAL DESCRIPTION:** Keferstein, W. M. 1866. Kopffüßer: Cephalopoda Cuvier *In Bronn, Die Klassen und Ordnungen des Thier-reiches: Weichthiere (Malacozoa), 1402, pls.122 (figs. 9, 10), 127 (fig. 14). (As *Loligo bleekeri* Keferstein, 1866)*

**TYPE LOCALITY:** Japan

**HABITAT:** From surface waters to depths of approximately 150 m; it has never been recorded beyond the continental shelf.

**GENERAL DISTRIBUTION:** Japan to Yellow and East China Seas; **JEJU:** ("Jejudo" (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical- lowboreal

**REMARKS:** Ontogenetic differences occur, with juveniles eating mostly copepods, young squids between 50 and 90 mm mantle length preying mostly on crustaceans, and adult squid over 200 mm mantle length feeding on fishes and other cephalopods (Jereb and Roper, 2010).

**Genus: *Uroteuthis* Rehder, 1945**

**12 *Uroteuthis edulis* (Hoyle, 1885)**

**ORIGINAL DESCRIPTION:** Hoyle, W. E. 1885, Diagnoses of new Species of Cephalopoda collected during the Cruise of H.M. S. 'Challenger'. Part II. The Decapoda. *Annals and Magazine of Natural History*, (series 5) 16: 186. (As *Loligo edulis* Hoyle, 1885 (Without illustration)

**TYPE LOCALITY:** Purchased in market, Yokohama, Japan

**HABITAT:** Inhabits continental shelf waters in Japan and winters inshore in shallow water. Although reported as one of the most oceanic species of the Japanese loliginids, it does not occur in the waters beyond the continental shelf (Jereb and Roper (2005)).

**GENERAL DISTRIBUTION:** East Sea to Indo-West Pacific; **JEJU:** Around Jejudo" (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Jereb and Roper (2005) accept *Uroteuthis (Photololigo) edulis* (Hoyle, 1885)

as the correct taxon; WoRMS (2014) accepts this as an “alternate representation”.

## **Order: OEGOPSIDA d'Orbigny, 1845**

### **Family: CRANCHIIDAE Prosch, 1849**

#### **Genus: *Liocranchia* Pfeffer, 1884**

**13 *Liocranchia reinhardtii* (Steenstrup, 1856)**

**ORIGINAL DESCRIPTION:** Hectocylidannelsen hos Octopodslaegterne *Argonauta* og *Tremoctopus*, oplyst ved Iagttagelse af lignende Dannelser hos Blacksprutterne i Almindelighed. Kongelige Danske Videnskabernes Selskabs Skrifter, 5 Raekke. *Naturvidenskabelig og Mathematisk*, 4: 200. (As *Leachia reinhardtii* Steenstrup, J. 1856)  
(Without illustration)

**TYPE LOCALITY:** 15° 19'N, 24°54'W and 23°N, 32°W (North Atlantic Ocean)

**HABITAT:** Lower epipelagic, mesopelagic, and bathypelagic zones (surface to 1 200 m)

**GENERAL DISTRIBUTION:** Circumglobally in tropical and subtropical waters, **JEJU:** “Vicinity of Jeju Island” (Son, 2009)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Widespread tropical-subtropical

## **OTHER SPECIES**

Jereb and Roper (2010) include Jejudo in their distribution maps for many other squid species. Unlike cuttlefish, which are generally more benthic in habitat and leave evidence of their occurrence in the form of cuttlebone, the pelagic nature of squid makes it difficult to ascertain whether or not these species have been reported from Jeju Island. The following are listed by Jereb and Roper followed by page numbers in their publication.

- Uroteuthis (Photololigo) chinensis* Gray, 1849 (p. 106)
- Ancistrocheirus lesueurii* (d'Orbigny, 1842) (p. 119)
- Brachioteuthis riisei* (Steenstrup, 1882) (p. 130)
- Chtenopteryx sicula* (Verany, 1851) (p. 146)
- Cranchia scabra* Leach, 1817 (p. 151)
- Bathothauma lyromma* Chun, 1906 (p. 161)
- Egea inermis* Joubin, 1933 (p. 162)
- Helicocranchia pfefferi* Massy, 1907 (p. 167)
- Liguriella podophthalma* Issel, 1908 (p. 169)
- Sandalops melancholicus* Chun, 1906 (p. 174)
- Discoteuthis discus* Young and Roper, 1969 (p. 181)
- Abraaliopsis hoylei* (Pfeffer, 1884) (p. 195)
- Watasesnia scintillans* (Berry, 1911) (p. 199)
- Histioteuthis hoylei* (Goodrich, 1896) (p. 228)
- Lepidoteuthis grimaldii* Joubin, 1895 (p. 239)
- Taningia danae* Joubin, 1931 (p. 265)
- Ommastrephes bartramii* (Lesueur, 1821) (p. 295)
- Eucleoteuthis luminosa* (Sasaki, 1915) (p. 305)
- Hyaloteuthis pelagica* (Bosc, 1802) (p. 307)
- Todarodes pacificus* (Steenstrup, 1880) (p. 328)
- Onychoteuthis banksii* (Leach, 1817) (p. 350)
- Onychoteuthis borealijaponica* Okada, 1927 (p. 352)
- Onykia lönnbergi* (Ishikawa and Wakiya, 1914) (p. 362)
- Walvisteuthis virilis* Nesis and Nikitina, 1986 (p. 367)

*Pyroteuthis margaritifera* (Rüppel, 1844) (p. 380)

*Pterygioteuthis giardi* Fischer, 1896 (p. 382)

*Thysanoteuthis rhombus* Troschel, 1857 (p. 385)

## Order: OCTOPODA Leach, 1818

**Family:** OCTOPODIDAE d'Orbigny, 1840

**Genus:** *Octopus* Cuvier, 1798

### 14 *Octopus vulgaris* Cuvier, 1797

(Fig. 4)

**ORIGINAL DESCRIPTION:** Cuvier, 1797, *Tableau Elementaire de l'Histoire Naturelle des Animaux*, 380. (As *Octopus vulgare* Cuvier, 1797) (Without illustration)

**TYPE LOCALITY:** Presumed western Mediterranean Sea

**HABITAT:** In dens on rocky, sandy, or muddy substrates at depths ranging from 0 to 250 m, typically occurring shallower than 100 m; primarily night active..

**GENERAL DISTRIBUTION:** Worldwide in temperate and tropical waters. (In the coastal subtropical and temperate waters of northwest Pacific Ocean, from at least Hong Kong and Taiwan in the south, to mid-Japan.) **JEJU:** Munseom (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** Classed as “*Octopus vulgaris* Type IV” (Jereb *et al.*, 2014)

### 15 “*Octopus parvus*” Sasaki, 1917

**ORIGINAL DESCRIPTION:** Sasaki, M. 1917. Notes on the Cephalopoda. Annotationes Zoologicae Japonenses, 9(3): 365, 366. (As *Polypus parvus* Sasaki, 1917) (Illustration???)

**TYPE LOCALITY:** Japan, Satsuma Prefecture

**HABITAT:** Depth range unknown.

**GENERAL DISTRIBUTION:** Korea and Southern Japan; northwest Pacific; **JEJU:** "Jejudo" (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Lowboreal

**REMARKS:** Provisionally placed in the genus '*Octopus*'. Types are in the Agricultural College, Sapporo, Japan (Sasaki, 1917)

**Genus: *Callistoctopus* Iw. Taki, 1964**

**16 *Callistoctopus luteus* (Sasaki, 1929)**

**ORIGINAL DESCRIPTION:** Sasaki, M. (1929), "A Monograph of the dibranchiate cephalopods of the Japanese and adjacent waters," Journal of the College of Agriculture, Tohoku Imperial University, Sapporo, 20 (suppl. 10): p. 45 (As *Polypus luteus* Sasaki, 1929) (Check illustration)

**TYPE LOCALITY:** Taiwan, Pescadore Islands (Peng-hu)

**HABITAT:** Sand, seaweed, and rubble areas, to depth of 82 m.

**GENERAL DISTRIBUTION:** Eastern Japan to Philippines, Indonesia, and Thailand; **JEJU:** "Jejudo" (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Type material in Hokkaido Imperial Museum (Norman, 1993). "At present known only from Taiwan and Philippines, south to Sulawesi, Indonesia, and Thailand. Awaits detailed description. May represent more than one species. (Jereb *et al.*, 2014)

**Genus: *Enteroctopus* Rochebrune & Mabille, 1889**

**17 *Enteroctopus dofleini* (Wülker, 1910)**

(Fig. 4)

**ORIGINAL DESCRIPTION:** Wülker, G. 1910. Über japanische Cephalopoden. Beiträge zur Kenntnis der Systematik und Anatomie der Dibranchiaten. Abhandl. II. Klasse d. K. Bayer. Akad. Wiss. Ill. Suppl. Bd.1: pp. 7, 8. Pl. 2, figs 1,2; pl. 3, fig. 10. (As *Polypus dofleini* Wülker, 1910)

**TYPE LOCALITY:** Hokkaido

**HABITAT:** Mainly in dens on rocky reefs or boulder areas with sand-shell substrate, at depths from 0 to 1, 500 m. Individuals also have been observed in sand and mud habitats. Often occurs intertidally at the northern end of its range but at the southern end it has been recorded to depths over 1, 500 m (Jereb *et al.*, 2014).

**GENERAL DISTRIBUTION:** Korea and Japan to Alaska southward to northern California;

**JEJU:** Munsom (Min *et al.*, 2004)

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Widely distributed boreal

**REMARKS:** The largest of all octopods. *Octopus (Enteroctopus) dofleini* (Wülker, 1910) is a synonym.

**Genus: *Haplochlaena* Robson, 1929**

### 18 *Haplochlaena fasciata* (Hoyle, 1886)

**ORIGINAL DESCRIPTION:** Hoyle, W.E. 1886. Report on the Cephalopoda collected by H.M.S. Challenger during the years 1873-76. In Report of the scientific results of the voyage of H.M.S. Challenger during the years 1873-76: a summary of the scientific results, Zoology. 16(44): 94, pl. 8; fig. 3. (As *Octopus pictus* var. *fasciata* Hoyle, 1886)

**TYPE LOCALITY:** Port Jackson, Sydney, Australia

**HABITAT:** Intertidal and shallow rocky reefs at depth from 0 to at least 20 m.

**GENERAL DISTRIBUTION:** Korea and Southern Japan to Taiwan and Hong Kong

(Australia: Southern Queensland to NSW); **JEJU**: "Jejudo" (Min *et al.*, 2004)

#### **ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Subtropical

**REMARKS:** According to Norman and Lu (2000), genuine *H. fasciata* is restricted to the warm temperate waters of the eastern Australian coast, and Korean and Japanese records probably represent a different, possibly new, species (Norman and Hochberg, 1994). However, Gleadall and Salcedo-Vargas (2004) state that inspection of the holotype of *H. fasciata* provides no reason to doubt that these Japanese specimens are the same species, despite the punctuated distribution of known specimens in Honshu (Japan), Hong Kong, and Eastern Australia. "A related undescribed species with blue lines is also present in Japan" (Jereb *et al.*, 2014).

Extremely venomous; tetrodotoxin venom produced in the salivary glands is distributed throughout the body organs and skin of this species. Responsible for at least one human death (Jereb *et al.*, 2014).

#### **OTHER SPECIES**

Although the following species have not yet been reported from Jeju Island, Jereb *et al.* (2014) include the island in their distribution maps for the following species:

*Amphioctopus fangsiao* (d'Orbigny, 1839-1841) (p. 72)

*Amphitretus pelagicus* Hoyle, 1885 (p. 217)

*Vitreledonella richardi* Joubin, 1918 (p. 220)

*Bolitaena pygmaea* (Verrill, 1884) (p. 223)

*Japetella diaphana* Hoyle, 1885 (p. 224)

*Haliphron atlanticus* Steenstrup, 1861 (p. 226)

Fig. 4: Distribution of *O. vulgaris* (●) and *Enteroctopus dofleini* (■)

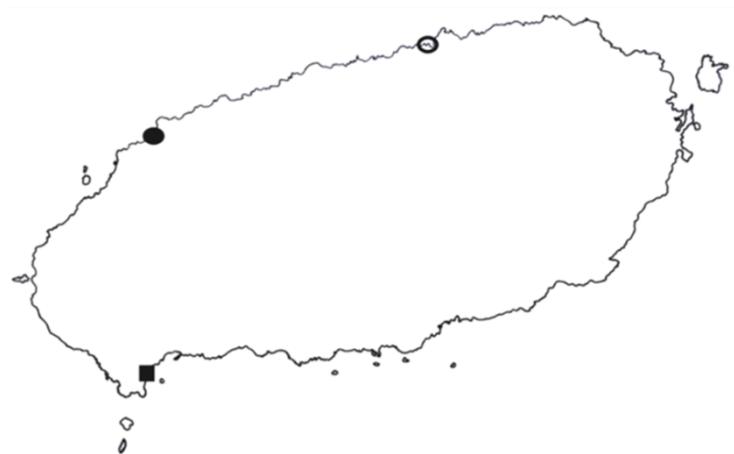

Fig. 5: Distribution of *A. argo* (●) and *A. hians* (■)

Suborder: Incirrata Grimpe, 1916

**Superfamily: Argonautoidea Cantraine, 1841**

**Family: ARGONAUTIDAE Cantraine, 1841**

**Genus: *Argonauta* Linnaeus, 1758**

**19 *Argonauta argo* Linnaeus, 1758**

(Fig. 5)

**ORIGINAL DESCRIPTION:** Linnaeus, 1758, Systema Naturae per Regna Tria Naturae, Secundum Classes, Ordines, Genera, Species cum Characteribus, Differentiis, Synonymis, Locis, Holmiae: 708. (As *Argonauta argo* Linnaeus, 1758) (Without illustration)

**TYPE LOCALITY:** Mediterranean Sea

**HABITAT:** Pelagic. Females use the shell to trap air, gathered at the sea surface, to attain neutral buoyancy (Jereb *et al.*, 2014).

**GENERAL DISTRIBUTION:** Worldwide in tropical and warm temperate seas. **JEJU:** Gimnyeong, Gwakji

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** Edible. Males are quite small. Females are occasionally found in markets in India, Japan, and Taiwan (Jereb *et. al.*, 2014).

**20 *Argonauta hians* Lightfoot, 1786**

(Fig. 5)

**ORIGINAL DESCRIPTION:** [Lightfoot, John]. 1786. A catalogue of the Portland Museum, lately the property of the Duchess Dowager of Portland, deceased, which will be sold at auction, by Mr. Skinner and Co London, pp. 12, 29 (As *Argonauta hians* Lightfoot, 1786) (Without illustration)

**TYPE LOCALITY:** Unknown

**HABITAT:** Pelagic. Females have been observed 'riding' jellyfish (Jereb *et al.*, 2014).

**GENERAL DISTRIBUTION:** Tropical and subtropical waters worldwide; **JEJU:** Sagyei

**ZONAL-GEOGRAPHICAL CHARACTERISTICS:** Tropical-subtropical

**REMARKS:** It is an extremely variable species and there appear to exist at least two distinct forms; a "southern" form and "northern" form. The former is most abundant in the Philippines and South China Sea. It is a much smaller animal, with a shell that rarely exceeds 80 mm and lacks the winged protrusions for which this species is named. The "northern" form, which is found in the waters surrounding Taiwan, Hong Kong and Japan, produces a much larger, darker and more robust shell that can reach 120 mm and has the characteristic winged protrusions. It is usually less elongated than that of the "southern" form and lacks its porcelain-like shine. Further research is needed to determine whether or not these forms represent two separate species (Norman, 2000).

## DISCUSSION

A total of 272 species in the four classes studied are reported from Jeju Island. There are 225 bivalves, with only one freshwater species. Among the smaller classes there are twenty Cephalopoda, nineteen Polyplacophora, and eight Scaphopoda. The best represented bivalve families are the Veneridae, Mytilidae, and Arcidae, with 29, 21, and 13 species respectively. The Cardiidae have nine species, and the Ostreidae, Pectinidae, Lucinidae, and Tellinidae have eight species each. Twenty families have only one species. The most speciose family in the Polyplacophora is the Acanthochitonidae with five species, followed by the Chitonidae and Mopaliidae with four each. The Sepiidae are the most speciose of the cephalopods with eight species followed by the Octopoda with five. Jereb and Roper (2005); Jereb and Roper (2010); Jereb *et al.* (2014), in the three-volume *Cephalopods of the World*, include Jeju Island in their distribution maps for 27 squid species and six octopus species. As far as can be ascertained, these species have not yet been reported from Jeju Island but, given the pelagic nature of squid and with more sampling of benthic organisms, some or most of these species may become part of the Jeju cephalopod fauna. Among the Scaphopoda, the Dentaliidae have the most species with four. Of particular note is the absence of some of the more common, edible mainland bivalve species, e.g. *Meretrix* spp., because of the relative lack of muddy substrates.

Of specific interest is a comparison between a previous Jeju Island mollusk catalogue (Noseworthy, 2007) and the present study. The first catalogue enumerated 225 bivalves, and sixteen cephalopods, eleven chitons, and eight scaphopods. This study reports the same number of bivalves; however, there are some changes to the composition of the fauna. Several misidentifications and synonyms have been removed from the previous catalogue and replaced with new species records. The number of cephalopods has increased slightly from

16 to 20 because of possible additions by Jereb and Roper (2005); Jereb and Roper (2010); Jereb *et al.* (2014), and the reporting of a new squid species (Son, 2009). Species previously reported (Hong, S. Y. *et al.*, 2006; Hong, J. S. *et al.*, 1990) but unlisted in the previous catalogue, and new species records, have also raised the number of chiton species from 11 to 19. The number of scaphopods remains unchanged. Thus, whereas the total number of species in the four classes in the previous catalogue was 260, the total number in this survey is 272, with the increase in species number in the Polyplacophora and Cephalopoda.

## CLASS ANALYSIS

### BIVALVIA

The Jeju bivalve fauna consists of three subclasses, Protobranchia, Pteriomorphia, and Heterodonta. The latter subclass is by far the largest with 34 families, with the Protobranchia and Pteriomorphia having three and 18 families respectively. The maps clearly show the distribution of each species on the island. In general, the families, eg. Chamidae, with a tropical-subtropical distribution, to Southeast Asia and the Indo-Pacific, tend to occur more often on the southern coast of the island where the water temperature is somewhat warmer. Also, some individual species have been found only on certain parts of the coastline; eg. *Kellia porculus*, a subtropical-lowboreal species, occurs only on the north and east coasts, while *Ylistrum japonicum* (=*Amusium japonicum*), a subtropical species, has been found only on the south coast. This may indicate water temperature preferences; however, more extensive sampling may result in the occurrence of those, and other, species on other coasts of the island.

Apart from adjustments in nomenclature because of new taxonomic studies, there are a number of new species records for the island. In the bivalves the boring mytilid

*Lithophaga* cf. *malaccana* (Reeve 1857) was obtained from the encrusting coral *Alveopora japonica* Eguchi, 1968 from several localities around the island and *Donax cuneatus* Linnaeus, 1758, a single fresh valve, was obtained from Hwasoon Beach. These have not been previously reported from Korea and represent new species records for the country.

Several species have been reported from the Korean mainland but not previously from Jeju Island, such as *Barnea (Anchomasa) manilensis* (Philippi, 1847) from hard-packed sandy mud at Hamo Beach, southwest corner of the island, *Hiatula boeddinghausi* Lischke, 1870, a single fresh valve from Hyupjae, on the northwest coast, and several live specimens of *Sphaerium japonicum* (Westerlund, 1883) from two small, muddy streams on the southern coast of the island. The latter is the first freshwater bivalve species reported from Jeju Island. This freshwater fauna may possibly be increased with the addition of a species of *Pisidium*; at present only a single worn valve has been obtained from one of the *S. japonicum* localities. Although it was previously believed that no freshwater bivalves occurred here (Noseworthy *et al.*, 2007), it now appears that the few muddy streams and ponds on the island may support a somewhat richer mollusk fauna than was previously believed.

Two other species previously reported from mainland Korea are possible new records. The arcid *Tegillarca granosa* (Linnaeus, 1758), has been found at several localities but most specimens (single valves) appear subfossil, although some seem to be fresh. Another species is the psammobiid *Nuttallia* cf. *ezonis* Kuroda & Habe in Habe, 1955, also found at several localities. Species of *Nuttallia* can be quite difficult to differentiate based on shape, periostracal color, and depth of pallial sinus.

*Arca boucardi* Jousseaume, 1894 may not occur on Jeju Island. K. Lutaenko, who has extensively studied the Arcidae, is of the opinion that what has been previously regarded as Jeju Island specimens of *A. boucardi* may instead be elongated specimens of *A. avellana*.

Lamarck, 1819. The author of this study has collected specimens of *A. boucardi* from several localities in Peter the Great Bay, Eastern Russia, and those specimens appear somewhat different from Jeju Island specimens of *A. boucardi*, being larger with stronger radial ribs. Thus, until a more detailed examination of Russian and Jeju specimens can be implemented, *A. boucardi* is provisionally regarded as part of the Jeju Island fauna.

Three species that may also become part of the Jeju bivalve fauna are *Anadara kagoshimensis* (Tokunaga, 1906) (Plate 2: G, H), *Glycymeris imperialis* Kuroda, 1934 (Plate 3: E, F), and *Macoma incongrua* (von Martens, 1865), previously reported from the Korean mainland. Lutaenko (pers. comm.) has examined several valves of *Anadara*, *Glycymeris*, and *Macoma* from several Jeju localities and believes that they may represent these species. However, a more careful examination is needed before those species are accepted as part of the island fauna.

### Taxonomic changes

The taxonomy of the Jeju Island bivalves has undergone many changes since the 2007 catalogue was published, mainly due to the work of Huber (2010), Temkin (2010), Dijkstra (2013), and Bieler *et al.* (2010). Changes in the number of species in bivalve families in this survey are due mainly to the discovery of new species records as well as taxonomic modifications. The increase in species numbers in the Psammobiidae, from four to six, and the Pholadidae, from two to three, is the result of new species records being added. The number of species in the Pectinidae has decreased from 12 to eight because of the synonymization of three species and the misidentification of another in Min (2004). Misidentifications are also the cause of the reduction in species number in the Glycymerididae from five to three. Changes in the systematics of other families have led to

the number of species in the Lucinidae increasing from seven to eight, with the addition of the subfamily Leucosphaerinae from the Thyasiridae (Taylor, 2014), and the Veneridae from 28 to 29, with the addition of the Petricolidae as a subfamily, Petricolinae (Bieler and Mikkelsen, 2006). The number of species in the Lasaeidae has increased from two to seven because of confusion in separating this family from the Kelliidae, Montacutidae, and Melliterycidae (Bieler *et al.*, 2010; Lutaenko and Noseworthy, 2012; Bouchet, 2015).

## OTHER CLASSES

The Jeju Polyplacophora fauna, which has increased with the addition of three new species records, consists of one subclass, Neoloricata, and two orders, Lepidopleurina and Chitonina, with the latter containing all species except one, *Leptochiton japonicus* (Thiele, 1909). Apart from adjustments in nomenclature because of new taxonomic studies, there are other changes in the composition of the families. The Chitonidae now has four species with one new species record; the Mopaliidae now has four, also with a new record, the Acanthochitonidae with two additional records, and the Cryptoplacidae, now regarded as a separate family, from one to two with the addition of a new species record. It is possible that even more chiton species, particularly the smaller ones, may be found with more intensive sampling.

There have been no new Jeju species records in the Scaphopoda, and the only taxonomic change has been the moving of the genus *Megaentalina* from the Entalinidae to the Gadilidae (Steiner and Kabat (2004). Jeju scaphopods are not well known; most being subtidal to bathyal in depth. Only one species, *Dentalium buccinulum* Gould, 1859 occurs in the intertidal zone and is the one most often encountered as dead specimens in beach drift. The number of cephalopod species has increased from 16 to 20, mainly with the addition of

three species in the Seipiidae, one in the genus *Metasepia* and three in *Sepia*. However, as there have been no confirmed records of those species from Jeju Island, they are regarded only provisionally as part of the fauna. The squid family, Cranchiidae, has been added to the cephalopod fauna with the report of *Liocranchia reinhardti* (Steenstrup, 1856) from “vicinity of Jeju Island” (Son, 2009).

## ZONAL-GEOGRAPHICAL ANALYSIS

In order to show more specifically the biogeographical affinities of the Jeju mollusk fauna, each species was assigned a zonal-geographical grouping based on their known distribution ranges: 1. tropical-subtropical (southward to Southeast Asia), 2. subtropical (southward to Taiwan and the northern part of the South China Sea), 3. subtropical-lowboreal (subtropical areas, the Yellow and East Seas, southeastern Sakhalin and southern Kuril Islands), 4. lowboreal (limited to the East Sea from Peter the Great Bay, northern Korea, northern Honshu to southwestern Sakhalin, Aniva and Terpenya Bays, and the southern Kuril Islands), 5. widely distributed boreal (limited within the East Sea and Hokkaido to Bering Strait along the Asian coast and along the northern American coast southward to California) and circumboreal (limited mainly to temperate latitudes, in both Atlantic and Pacific Oceans, but partly to subtropical and arctic zones), and 6. boreal-arctic (limited both to the temperate zone of the Pacific Ocean, and to the Arctic and partly to the temperate Atlantic) (Lutaenko *et al.*, 2006).

More extensive information concerning the distribution of Jeju mollusks has allowed a revision of some of the zonal-geographical groupings. After an analysis of the zonal-geographic features of each species in the four classes, based on their geographic ranges, some interesting results were obtained showing the biogeographical affinities of each class.

In general, the Scaphopoda preferred warm water areas, being mainly tropical-subtropical and subtropical species; the Cephalopoda, as well, favored warm waters, while the Polyplacophora preferred somewhat cooler waters, with more northern ranges (Table 1). The three orders of the Bivalvia, Protobranchia, Pteriomorphia, and Heterodonta all exhibit the same preference for mainly warm water, with most species ranging from the tropical and subtropical areas to the warmer parts of the East Sea (Table 2).

The main bivalve families, those with five or more species, exhibit more clearly this preference for warm water. In the Pteriomorphia the Mytilidae, Arcidae, and Ostreidae show a strong preference while all species of the Pteriidae and Pectinidae prefer warm water. However, while most species of Limidae are warm water in preference, a significant number of species, 37%, prefer cooler water. The heterodont families Carditidae, Cardiidae, Lasaeidae, Psammobiidae, and Veneridae are mainly warm water, with 93% of the latter family exhibiting this preference. All species in the Lucinidae, Chamidae, Tellinidae, and Myochamidae prefer warm water. Only the Mactridae have a significant number of moderately warm to cool water species (40%). (Table 2).

Of the seven bivalve species added to the Jeju fauna six are warm water species (tropical-subtropical and subtropical), and only one, *Nuttallia cf. ezonis*, prefers cooler water (Table 3). The newly reported cephalopods, confirmed and provisional, also have southern distributions. It appears that, with climate change, more mollusk species with southern ranges are being newly reported, mainly for Jeju Island but also for mainland Korea (eg. Son, 2009). Although this is indicated in the Bivalvia, it is most noticeable in the Gastropoda, such as the Ranellidae and Strombidae.

Two previous faunal studies (Noseworthy *et al.*, 2007; Noseworthy and Choi, 2010) arrived at similar conclusions. The Scaphopoda had mainly warm water affinities, while the

Polyplacophora, with the exception of *Ischnochiton (Haploplax) comptus*, preferred somewhat cooler waters (warm temperate = subtropical-low boreal). In the 2007 study the Cephalopoda, however, were also regarded as having similar water temperature preferences whereas, after a more detailed revision of their ranges, and the addition of new species, it now appears that the Jeju cephalopods, in general, prefer warmer water areas. The Bivalvia also were regarded as mainly tropical-subtropical, with only a few having a northern distribution. Thus, in general, the Jeju Island fauna in the four classes examined can be considered to be warm water in nature with most species ranging southward to the East China Sea and Southeast Asia.

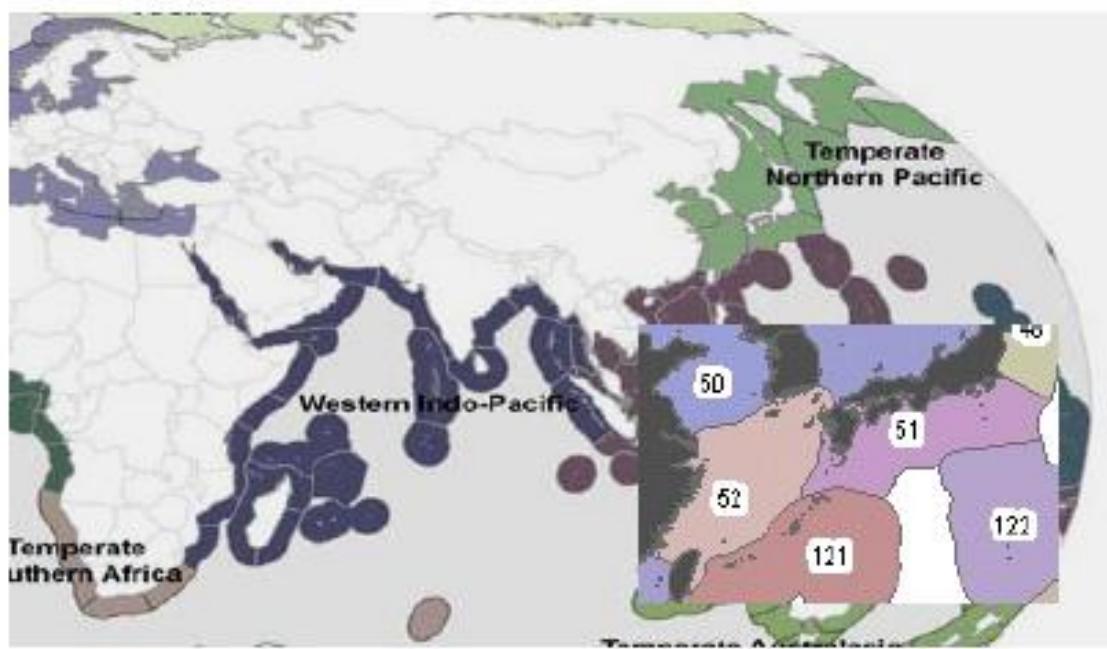

In this regard, it can be seen that species from the tropical and subtropical areas follow the northeastward flow of the Kuroshio Current and its branch, the Tsushima Current, which washes the shores of Jeju Island. A possible reason for the preponderance of warm water species in the Bivalvia is the fact that bivalve larvae can stay viable in the water column for a relatively long time (Brusca and Brusca, 2003), enabling them to travel longer distances northward than most species from the other classes. The Cephalopoda, in general, are the most active of all mollusks, and their distribution in the Western Pacific generally follows not only the continental shelf but also the Kuroshio and Tsushima Currents (Jereb and Roper, 2005; Jereb and Roper, 2010; Jereb *et al.*, 2014). The only exception is the Polyplacophora. A few species range as far south as Hong Kong (Bullock and Harper, 1994) or Taiwan (Yeh, *et al.*, 2005) but most are concentrated around Korea and Japan with some ranging as far north as the Sea of Okhotsk. Only two species of *Liolophura* range as far south as Southeast Asia. Little is known about the distribution patterns of Jeju Scaphopoda.

Marine Ecoregions of the World (MEOW) (Spalding *et al.*, 2007) is a detailed, comprehensive biogeographic system to classify coastal and continental shelf areas.

According to this classification, Jeju Island is a part of the Temperate North Pacific Realm (Region) and the Warm Temperate Northwest Pacific Province. This mainly subtropical province extends from eastern Japan to the South Korean coast, then south to eastern China and Taiwan (Ecoregions 51 and 52). Jeju Island is situated in the northeastern part of the East China Sea Ecoregion 52 (Fig. 5).

Thus there is a strong affinity with the subtropical mollusk fauna of southern Japan and eastern China, and also northeast Taiwan (Noseworthy *et al.*, 2010). However, a large number of species (approximately 50%) also extend even further south in the tropical West Pacific to Southeast Asia and throughout the Indo-Pacific region. In fact, most of the species, 55%, newly reported for the Jeju fauna, in the four classes studied, have a similar distribution (Table 3).

It appears that, with climate change, the Jeju Island Bivalvia, Polyplacophora, Scaphopoda, and Cephalopoda generally exhibit a slight shift towards a warmer water fauna. Preliminary studies on the Jeju Gastropoda indicate that the change, in this class, may be even greater.

**Fig. 5:** Biogeography of Jeju Island (After Spalding et al., 2007)

## CONCLUSION

The study of molluscan taxonomy is always a “work in progress”. Although there may be a desire to keep the “old names” in spite of advances in various classes based on detailed phylogenetic studies employing molecular and morphological data, it is important to know the current status of the systematics and nomenclature of any groups selected for research. Names are being changed, new species are being described, and some names fall into synonymy. This present study reveals many name changes with some newly-described species as well as additions to the fauna.

The number of mollusk species attributed to the Jeju Island fauna is steadily increasing. In this study, new species records have been added to the Polyplacophora, Bivalvia, and Cephalopoda, and a future study including the Gastropods will increase the number even further. Regarding the new records, there are two types: those previously reported from the Korean mainland but not from Jeju Island and those new to the Korean fauna which, of course, includes the island. Furthermore, there are several possible new species records for the Jeju fauna which require more study, especially in the Bivalvia and Cephalopoda.

There is now a preponderance of warm-water species in the four families studied, mainly with subtropical and tropical affinities. This trend holds true for the species newly reported for the island. Older studies (Noseworthy et al., 2007; Noseworthy and Choi, 2010) showed primarily a somewhat moderately warm to cooler water fauna. In the latter study a comment was made that: "...there is an increasingly urgent need for another type of comparative study, over periods of time, to examine the effects of climate change." This study has demonstrated a slight shift toward a warmer water mollusk fauna for Jeju Island, and preliminary studies on the numerous species of island gastropods indicate an even

stronger southern influence (eg. Lee and Park, 2014). Furthermore, new species reports from the Korean mainland (eg. Lee *et al.*, 2013) suggest that the effects of climate change are being felt there as well.

## ACKNOWLEDGEMENTS

Many people assisted me in preparing this study of Jeju mollusks. A work of this scope requires the input of many people, and I have many to thank.

First, I am indebted to my supervisor, Dr. Choi, Kwang-sik (Albert). His insight into research methods and manuscript preparation was invaluable. I enjoyed and appreciated our many conversations about this work and marine studies in general. I also would like to thank Dr. Kang, Young-cheul, manager of Eco21, an environmental survey company. In his laboratory, for over eight months, I identified a large number of mollusks from all classes except scaphopods. I especially appreciate his kindness and generosity in providing many specimens, including bivalves and chitons, to the Shellfish and Aquaculture Laboratory for further study. Dr. Tsukasa Waki kindly provided Japanese literature references. Thanks also go to Konstantin Lutaenko, my friend and colleague at the Zhirmunsky Institute of Marine Biology, Vladivostok, Russia, who provided literature and identification assistance. We have collaborated on several papers and a book on bivalve mollusks, and look forward to more fruitful work together. I also appreciate the efforts of Mrs. Irina E. Volvenko, Zoological Museum, Far Eastern Federal University, Vladivostok, Russia, who took photos and prepared the plates of some of our bivalve species.

Specialists from around the world were of assistance in identification and taxonomy, particularly with bivalves. I would like to thank Henk Dijkstra, Leiden, The Netherlands, for his help with identification and taxonomy of the Pectinidae, Harry Lee, Florida, U. S. A., for taxonomic assistance, and the late, and much-missed, taxonomic guru, Richard E. (Dick) Petit, South Carolina, U. S. A. who helped to unravel some challenging bivalve nomenclature. Many other knowledgeable members of the Conch-L listserve were always ready to answer any of the many queries I made concerning my mollusk research.

The students at our Shellfish and Aquaculture Laboratory were always ready and willing to help me, especially in sorting the multitude of invertebrates inhabiting the dozens of colonies of the coral *Alveopora japonica*, a subject of ongoing research. Thanks to their efforts I was able to identify 61 mollusk species, mainly bivalves. Cho Young-ghan, one of our students, was especially helpful in assisting me with the formatting of figures, tables, and large number of distribution maps. Other individuals deserve mention. Christiana Sikora, my wife's friend, found and donated the first specimen of *Donax* reported for Korea. Mike Dragsten enjoyed finding many shells for me while swimming and snorkeling around Jeju Island. He obtained for me a specimen of *Hiatula boeddinghausi*, the first record for the island.

My family, who has helped me for many years of collecting and research, both here and in my home province of Newfoundland and Labrador, Canada, were of great help in the fieldwork leading to this study. My wife, Joy, and my younger daughter, Lori, accompanied me on many of my fieldtrips, and obtained good collections of mollusks from various localities. Lori was adept at finding the small specimens, and Joy was skilled at finding a wide variety of species. My grandchildren, Kim Yenna, and Kim Yae-jeun, although young in years, have received their beach training and have contributed some interesting specimens for my study, including several new locality records.

I have been blessed with so many people willing to assist me in the study of Jeju Island's rich mollusk fauna. I extend my heartfelt gratitude to them all.

Anatomie der Dibranchiaten. *Abhandlungen der mathematische-physikalische Klasse der Königlich Bayerischen Akademie der Wissenschaften*, 3(Suppl. 1): 1–77, 5 pls.

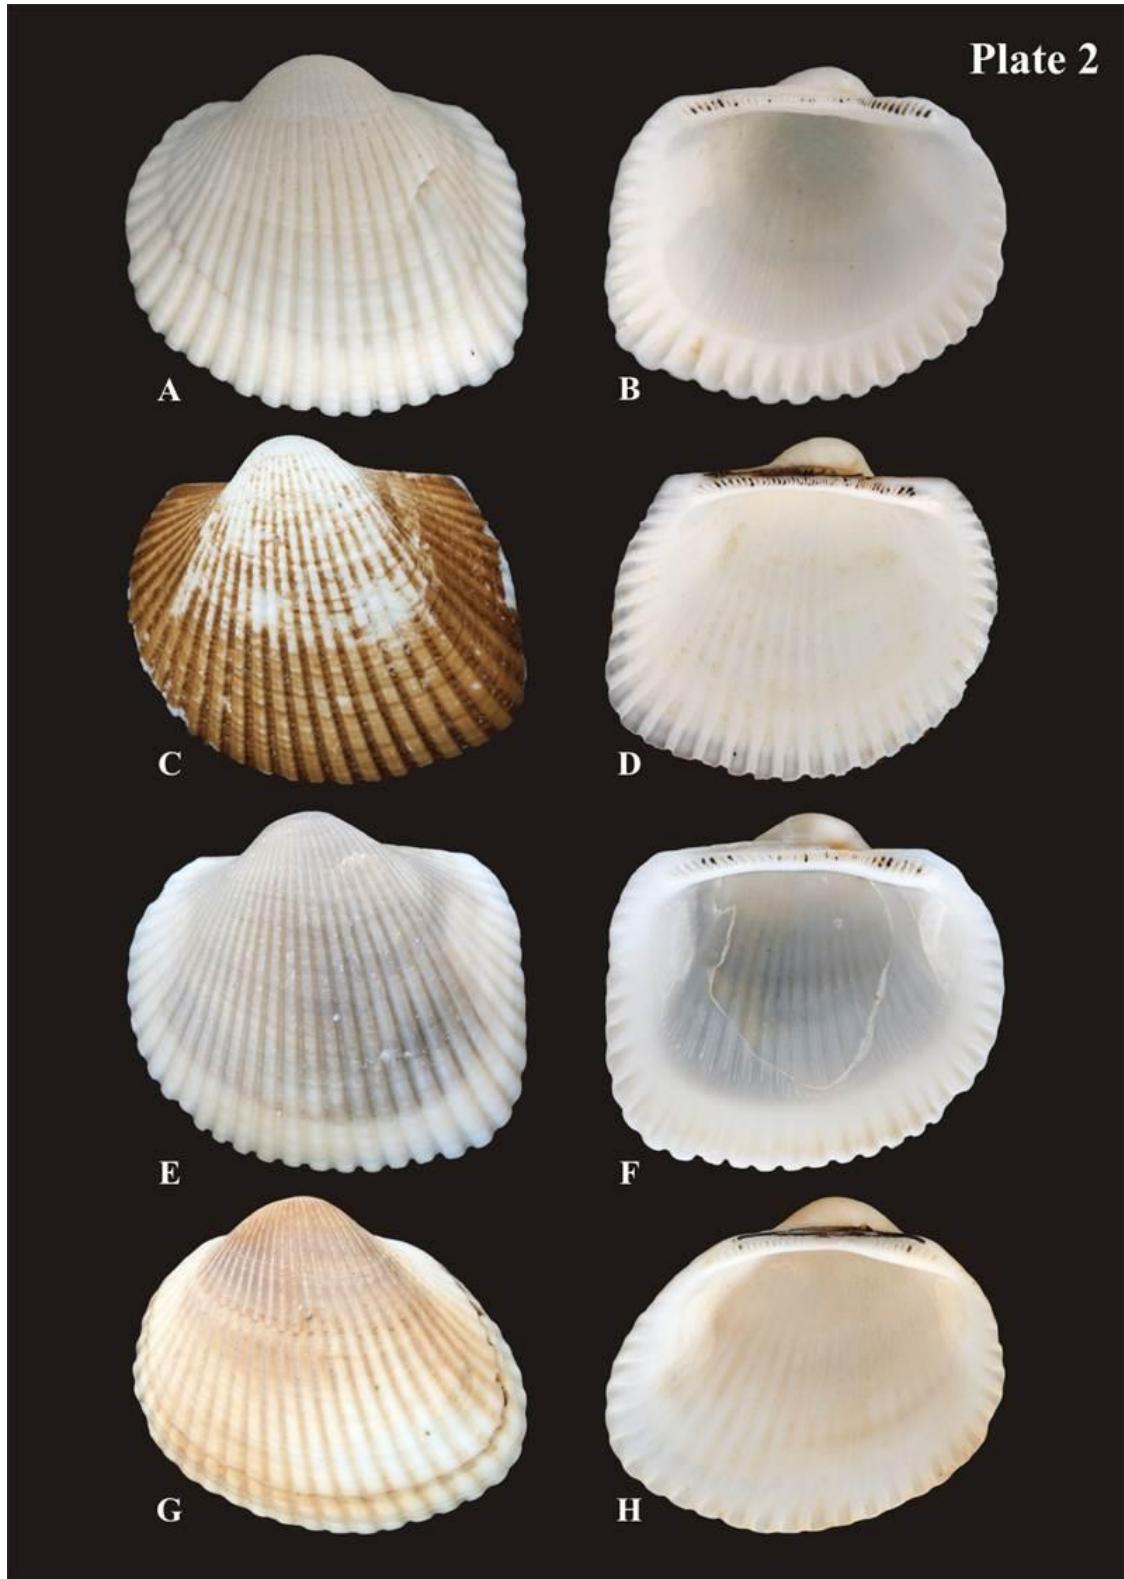

Yamamoto, T. 1942. Species list of the Korean cephalopods. *Venus*. 11(4): 125-133. [In Japanese]

**Plate 1**

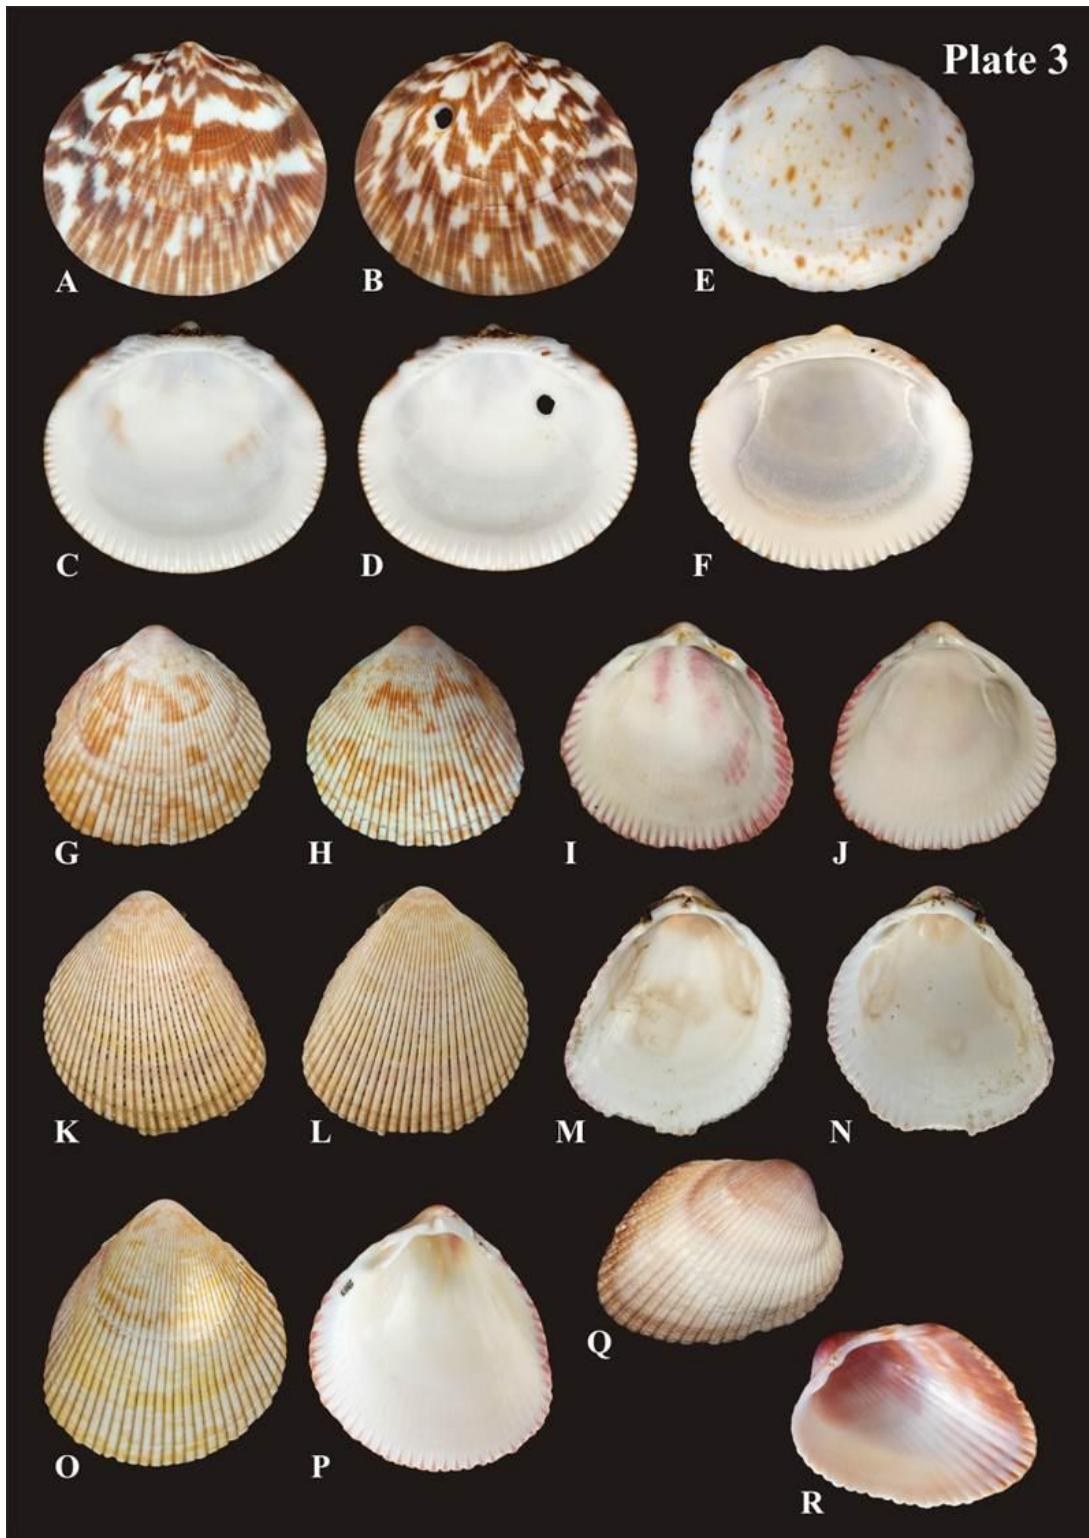

**Plate 1:** A-D – Nucula (Nucula) paulula; E-H - Arca avellana; I, J – Acar plicata; K-N – Striarca symmetrica; S-V – Barbatia stearnsii; O-R – Barbatia virescens

**Plate 2**

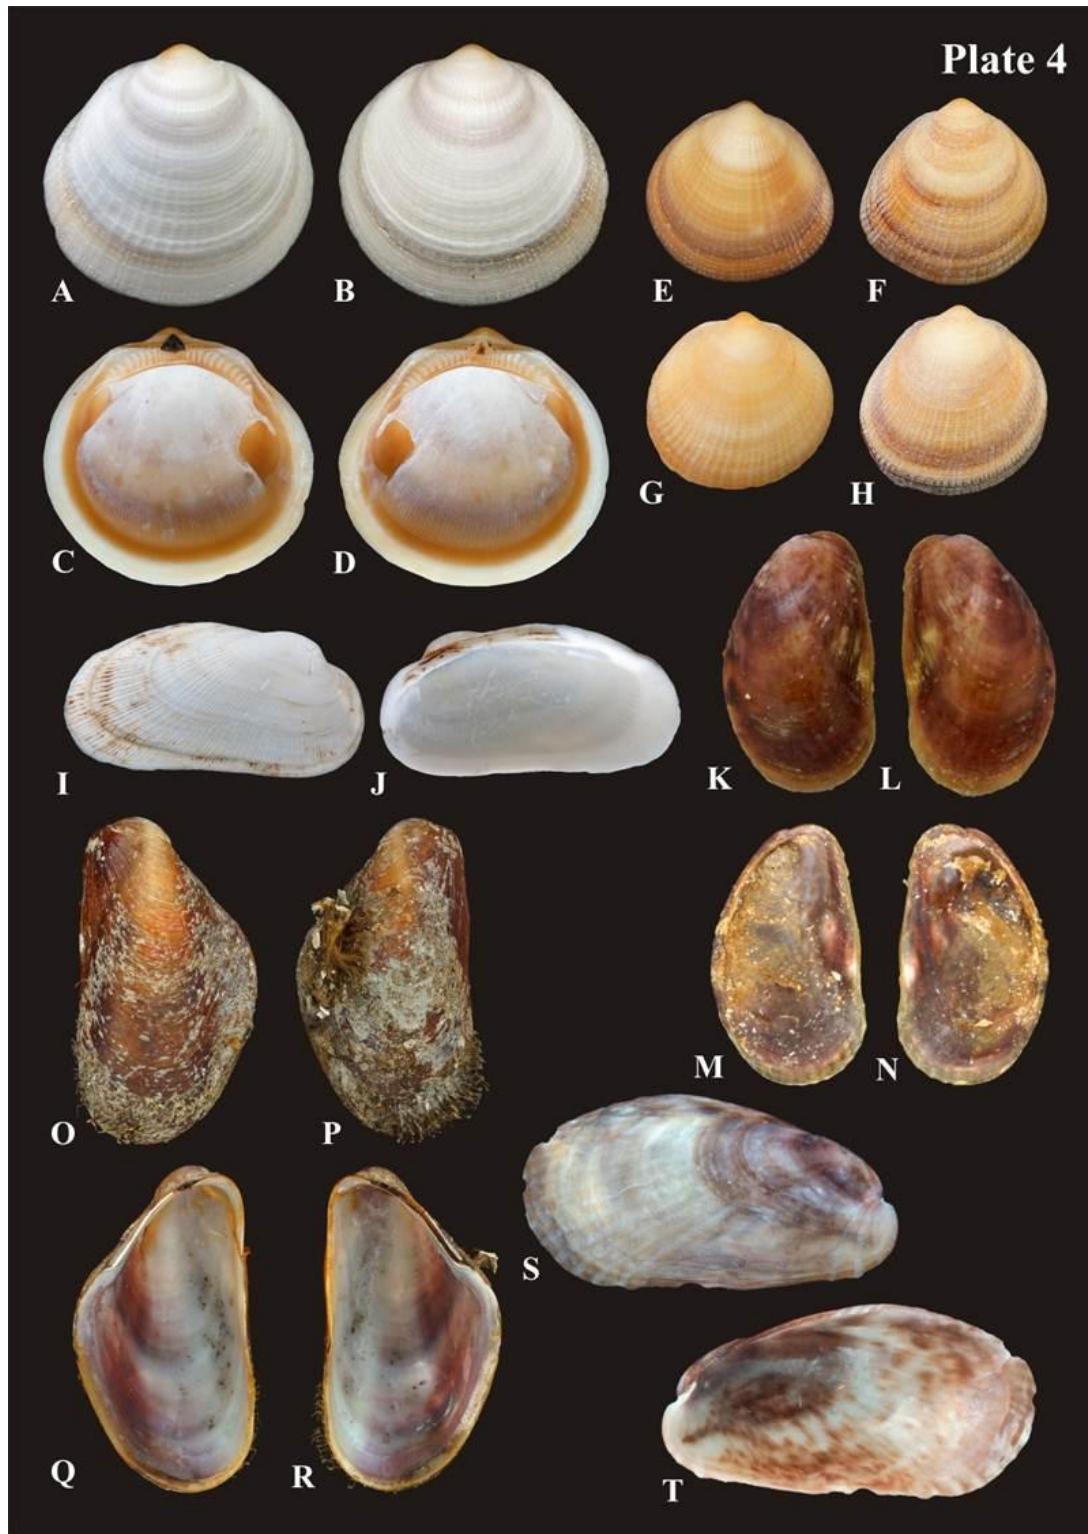

**Plate 2:** A-F – *Anadara* cf. *cornea* (= “*inaequivalvis*” aucct.); G, H – *Anadara kagoshimensis*

**Plate 3**

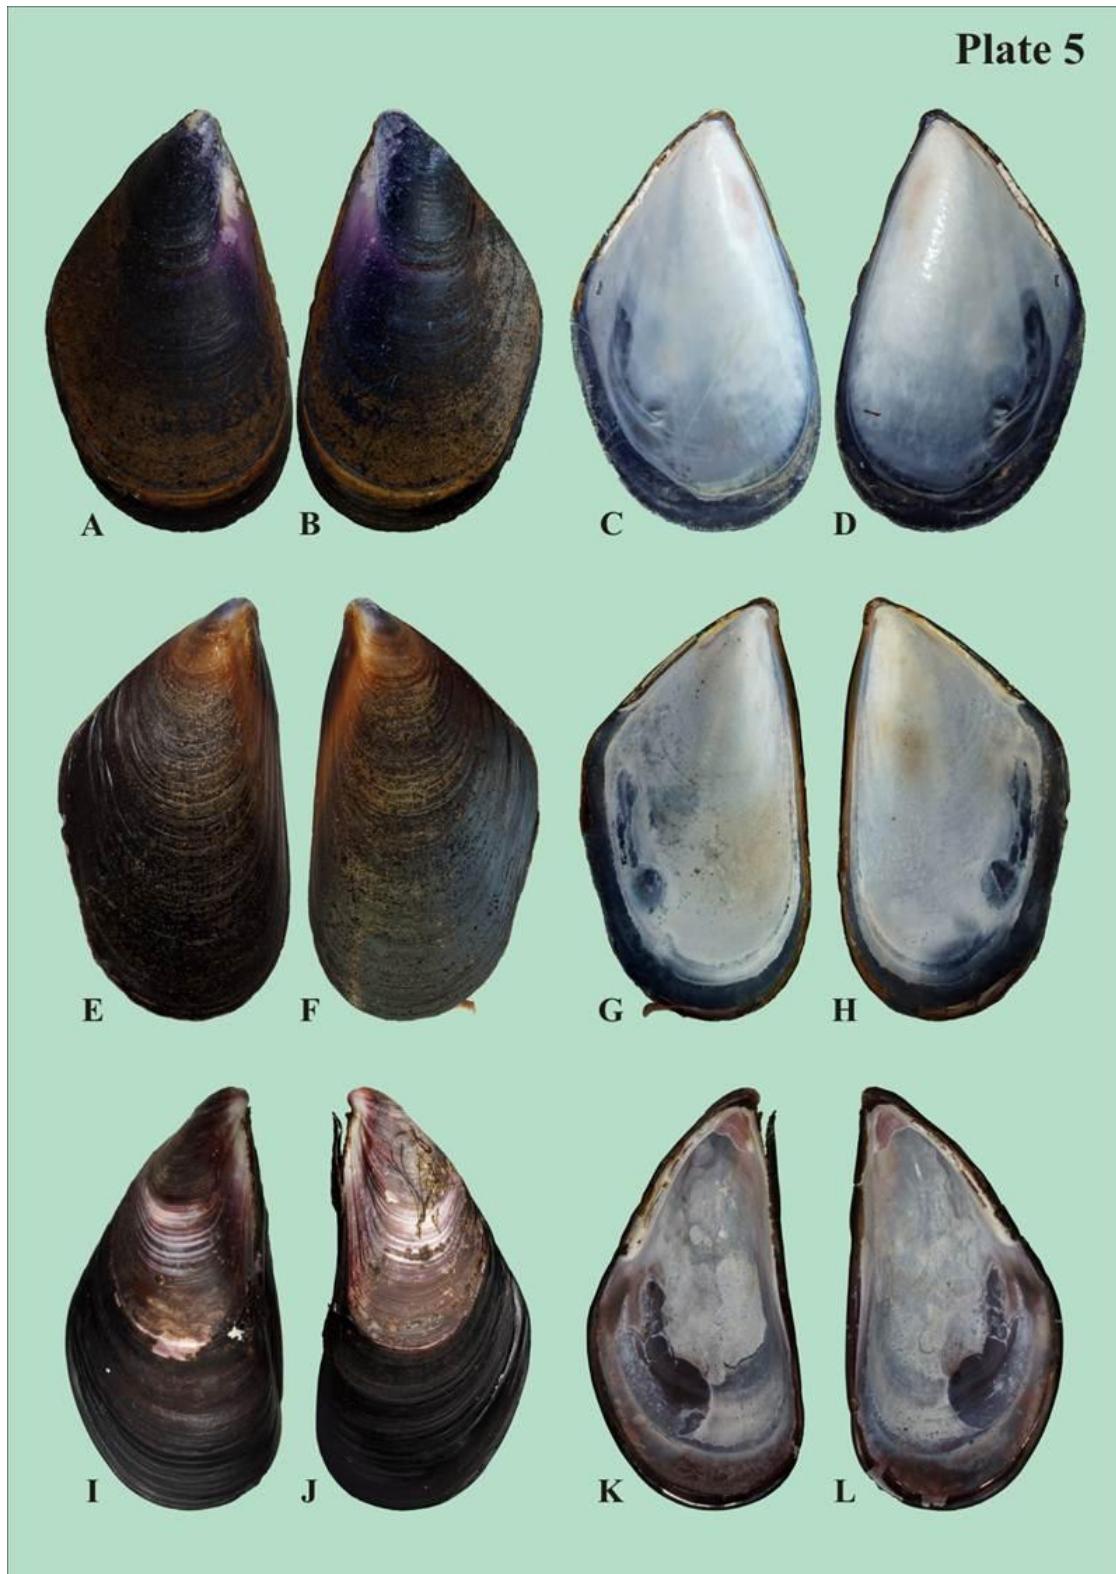

**Plate 3:** A-D – *Glycymeris albolineata*; E, F – G. cf. *imperialis*; G-J – *Acrosterigma maculosum*; K-N – *Acrosterigma burchardi*; O, P - A. *maculosum*; Q, R – *Afrocardium richardi*

**Plate 4**

**Plate 4:** A-H – *Limopsis japonica*; I, J – *Porterius dalli*; K-N – *Musculus nanus*; O-R – *Modilous cf. nipponicus*; S, T – *Musculus viridulus*

**Plate 5**

**Plate 5:** A-D – *Mytilus galloprovincialis*; E-H – *M. coruscus*; I-L – *Septifer virgatus*

**Plate 6**

**Plate 6:** A-D – *Ylistrum japonicum*; E, F – *Pecten albicans*; G, H – *P. albicans*

**Plate 7**

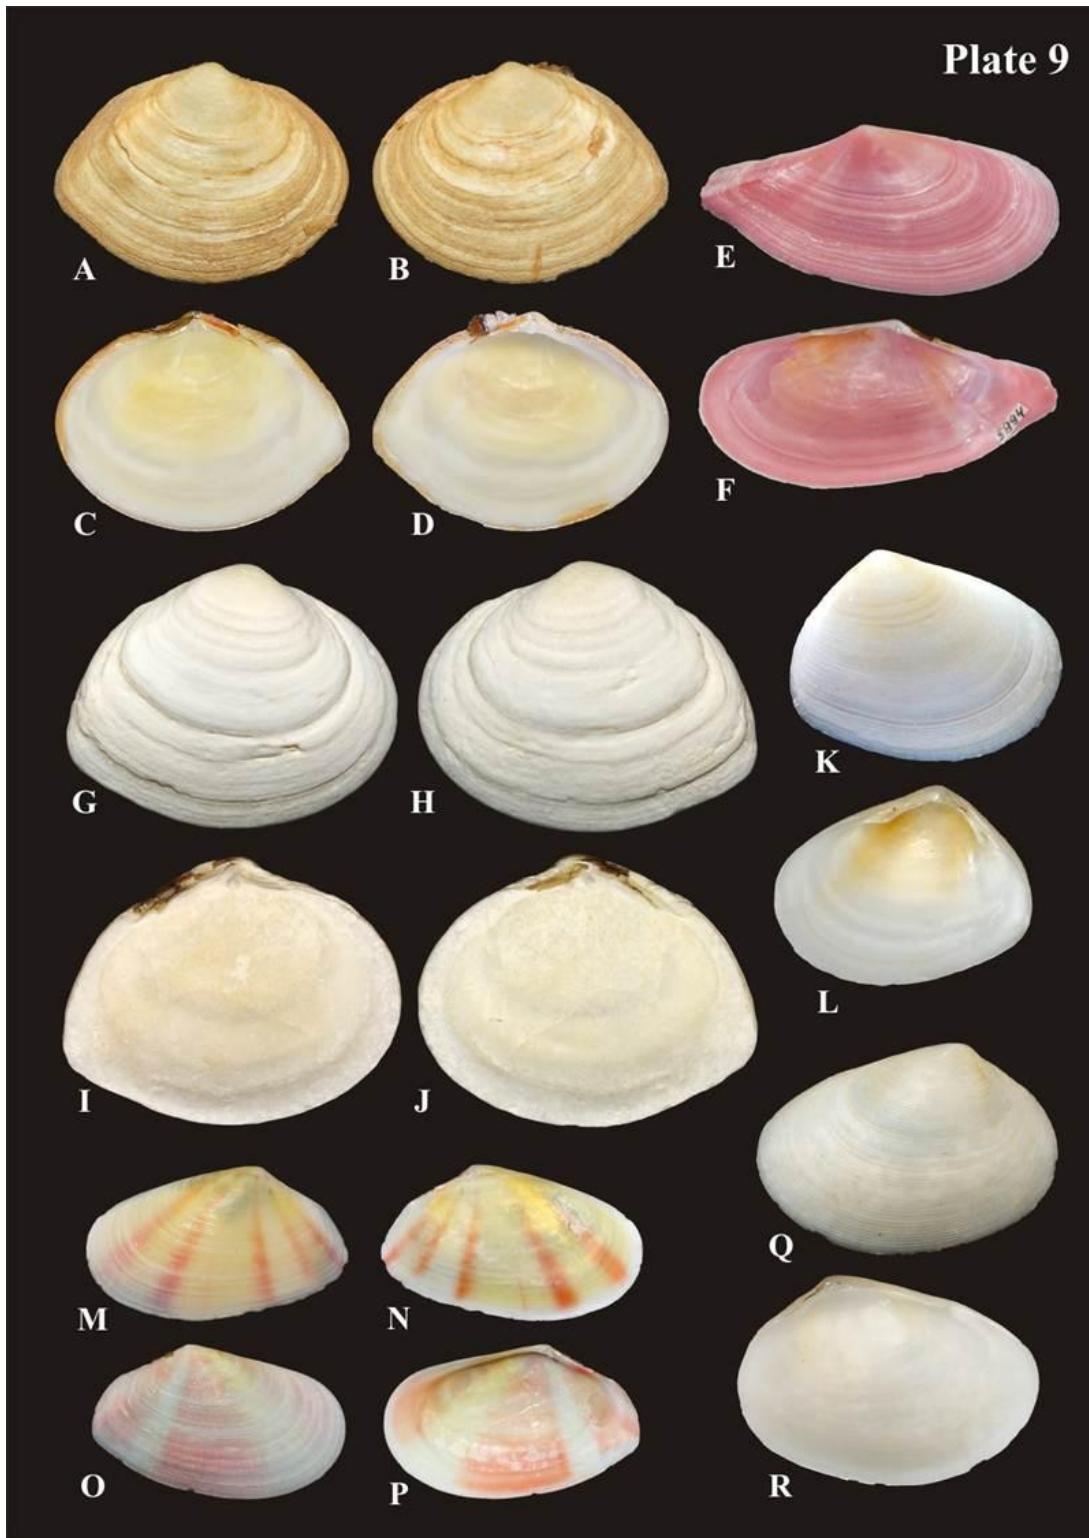

**Plate 7:** A, B – *Lutraria maxima*; C, D – *Mactra achatina*; E, F – *Solecurtus divaricatus*; G-J – *Entodesma navicula*

**Plate 8**

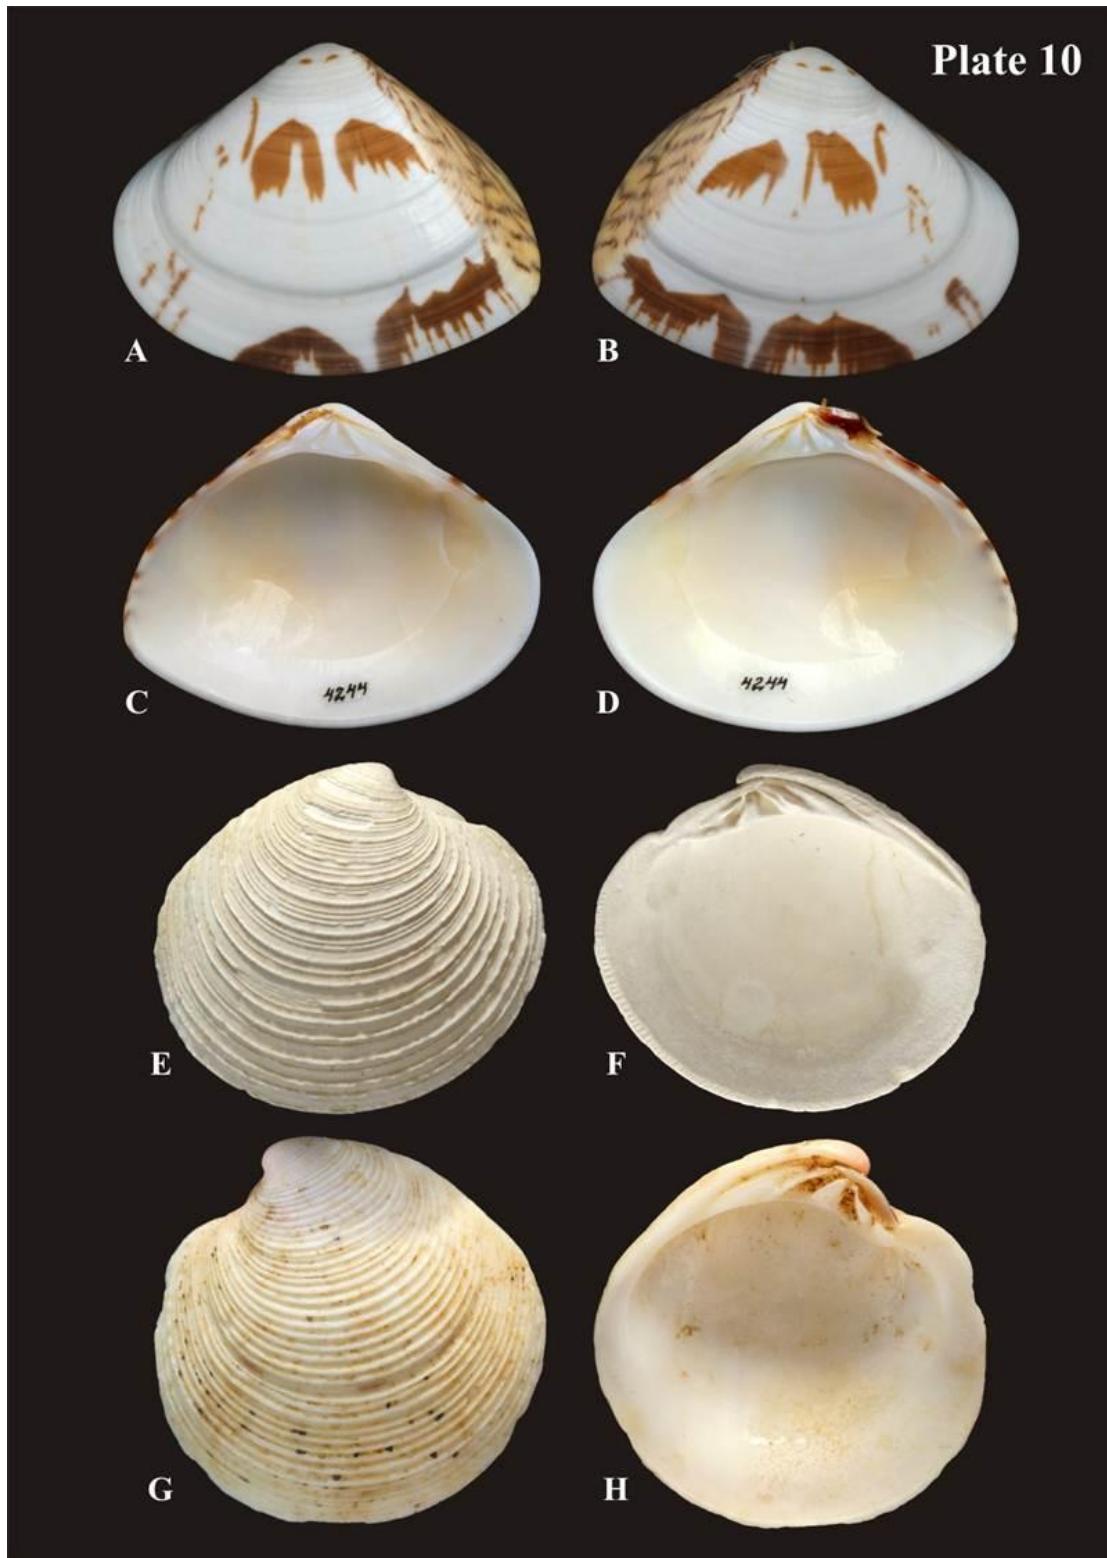

**Plate 8:** A-F – *Hiatula atrata*; G-J – *Nuttallia ezonis*

**Plate 9**

**Plate 9:** A-D, G-J – *Heteromacoma irus*; E, F – *Pharaonella sieboldi*; K, L – *Pristipagia subtruncata*; Q, R – *Cadella narutoensis*; M-P – *Jactellina clathrata*

**Plate 10**

**Plate 10:** A-D – *Gomphina aequilatera*; E, F – *Venus cassinaeformis*; G, H – *Dosinia iwakawai*
